## Overall summary

### Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Barnwood Medical Practice on 7 June 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.

- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

The areas where the provider should make improvement are:

- Ensure all staff have received their appraisals within the 12 month cycle.

**Professor Steve Field (CBE FRCP FFPH FRCGP)**  
Chief Inspector of General Practice

# Summary of findings

## The five questions we ask and what we found

We always ask the following five questions of services.

### Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Good

### Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were at or above average compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff, although some of the nursing teams appraisals had lapsed due to staff sickness.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Good

### Are services caring?

The practice is rated as good for providing caring services.

- Data from the national GP patient survey showed patients rated the practice comparable to others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.

Good

# Summary of findings

- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

## Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and clinical commissioning group (CCG) to secure improvements to services where these were identified. For example, the practice participated in a CCG led initiative called Choice Plus which allowed additional emergency slots to be available for patients to be seen at either Gloucester Health Access Centre or Matson Lane Surgery. The appointments were triaged at the practice and available under strict criteria, this resulted in greater emergency appointment availability for patients.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had excellent facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.
- The practice arranged daily nurse visits to an intermediate care centre for older patients and when required arranged for GPs to visit.

Good

## Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.

Good

# Summary of findings

- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken
- The practice proactively sought feedback from staff and patients, which it acted on. The practice had tried to engage a patient participation group however this was still a work in progress. The Business Manager held bi-monthly surgeries where he sat in the waiting area and engaged with patients to seek feedback and try to recruit potential PPG members.
- There was a strong focus on continuous learning and improvement at all levels.

# Summary of findings

## The six population groups and what we found

We always inspect the quality of care for these six population groups.

### Older people

Good

The practice is rated as good for the care of older patients.

- The practice offered proactive, personalised care to meet the needs of the older patients in its population and had a range of enhanced services, for example in influenza, pneumococcal and shingles immunisations.
- The practice was responsive to the needs of older patients, and offered home visits and urgent appointments for those with enhanced needs.
- The practice visited local care homes on a weekly basis.
- The practice held weekly meetings with community based staff to discuss the care of patients in this population group including those receiving palliative care.

### People with long term conditions

Good

The practice is rated as good for the care of patients with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Performance for overall diabetes related indicators in 2014/15 was 99% which was above both the clinical commissioning group average of 95% and the national average of 89%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

### Families, children and young people

Good

The practice is rated as good for the care of families, children and young patients.

# Summary of findings

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young patients who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Patients told us that children and young patients were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The practice's uptake for women aged 25-64 whose notes record that a cervical screening test has been performed in the preceding five years in 2014/15 was 84% which was comparable to the clinical commissioning group average of 84% and the national average of 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies. There were baby changing and feeding rooms available.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

## Working age people (including those recently retired and students)

Good

The practice is rated as good for the care of working-age patients (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- Extended hours appointments were available from 6.30pm to 8pm on Monday evenings for patients to attend outside of routine working hours.
- The practice offered telephone consultations for all patients which was useful for working patients.

## People whose circumstances may make them vulnerable

Good

The practice is rated as good for the care of patients whose circumstances may make them vulnerable.

# Summary of findings

- The practice held a register of patients living in vulnerable circumstances including homeless and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.
- The practice participated in a local social prescribing initiative.

## People experiencing poor mental health (including people with dementia)

**Good**

The practice is rated as good for the care of patients experiencing poor mental health (including patients living with dementia).

- 92% of patients diagnosed with dementia had their care reviewed in a face to face meeting in the last 12 months (04/2014 to 03/2015), which is above both the clinical commissioning group average (CCG) of 86% and the national average of 84%.
- Performance for mental health related indicators was 100% compared to the CCG average of 97% and national average of 82%.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.

# Summary of findings

- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia and all staff had received Mental Capacity Act training.

# Summary of findings

## What people who use the service say

The national GP patient survey results were published in January 2016. The results showed the practice was performing in line with local and national averages. Two hundred and sixty survey forms were distributed and 121 were returned, a completion rate of 47% (which represents 2% of the patient population).

- 71% of patients found it easy to get through to this practice by phone compared to a clinical commissioning group (CCG) average of 83% and a national average of 73%.
- 91% of patients described the overall experience of this GP practice as good compared to a CCG average of 89% and a national average of 85%.
- 85% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to a CCG average of 83% and a national average of 79%.

However,

- 69% of patients were able to get an appointment to see or speak to someone the last time they tried compared to a CCG average of 89% and a national average of 85%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 4 comment cards, all of which were positive about the standard of care received although two mentioned it was difficult to get appointments quickly with a chosen GP and one referred to poor customer service at reception although this did not align with other surveys and patients we spoke with on the day of our visit. Patients commented on the professional, helpful and caring service they received from the GPs and staff at the practice.

We spoke with six patients during the inspection. All six patients said they were satisfied with the care they received and thought staff were approachable, committed and caring.

The friends and family test from March 2016 showed that 75% of patients who responded were extremely likely or likely to recommend the practice to friends and family.

## Areas for improvement

### Action the service **SHOULD** take to improve

- Ensure all staff have received their appraisals within the 12 month cycle.

# Barnwood Medical Practice

## Detailed findings

### Our inspection team

#### Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser and a practice nurse specialist adviser.

## Background to Barnwood Medical Practice

Barnwood Medical Practice is located within a modern purpose built centre called the Aspen Centre which is shared with other healthcare providers, in a suburb of the city of Gloucester. The practice is wheelchair accessible with automatic doors and lifts to the practice.

The practice is approved for training qualified doctors who wish to become GPs and provides general medical services to approximately 5,800 patients. Services to patients are provided under a General Medical Services (GMS) contract with NHS England. (A GMS contract is a contract between NHS England and general practices for delivering general medical services and is the commonest form of GP contract).

The Practice has four GP partners (two male and two female) and one GP Associate (male) which is equivalent to four whole time GPs. The clinical team consist of three practice nurses, two healthcare assistants and one trainee healthcare assistant (all female). The practice management team comprises of a practice manager and a business manager who are supported by ten administrators/receptionists.

Information from Public Health England 2015 shows the practice population age distribution is comparable to both local and national averages. Of the working population 4% were unemployed which is below the national average of 5%.

The general Index of Multiple Deprivation (IMD) population profile for the geographic area of the practice is in the second least deprivation decile. (An area itself is not deprived: it is the circumstances and lifestyles of the people living there that affect its deprivation score. Not everyone living in a deprived area is deprived and that not all deprived people live in deprived areas). The prevalence of patients with a long standing health condition is 57% compared to the local clinical commissioning group (CCG) average of 55% and the national average of 54%. People living in more deprived areas and with long-standing health conditions tend to have greater need for health services.

Average male and female life expectancy for the practice is 79 and 84 years respectively, which is comparable to the national averages of 79 and 83 years.

The practice is open between 8.30am and 6.30pm on Monday to Friday. Between 8am - 8.30am every weekday telephone calls are picked up by the reception team and a duty doctor is on site to treat any medical emergencies. Appointments are available between 8.30am and 5.40pm. Extended surgery hours are offered every Monday evening between 6.30pm and 8pm.

Out of Hours cover is provided by South Western Ambulance Service NHS Foundation Trust and can be accessed via NHS 111.

The practice provides its services from the following address:

Barnwood Medical Practice  
Aspen Centre

# Detailed findings

Horton Road  
Gloucester  
Gloucestershire  
GL1 3PX

This is the first inspection of Barnwood Medical Practice.

## Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

## How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 12 May 2016. During our visit we:

- Spoke with a range of staff including four GPs, the business manager, one practice nurse, one trainee healthcare assistant, one reception team leader and one receptionist.
- We spoke with six patients who used the service.
- Observed how patients were being cared for and talked with carers and family members.

- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed 4 comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people.
- People with long-term conditions.
- Families, children and young people.
- Working age people (including those recently retired and students).
- People whose circumstances may make them vulnerable.
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

# Are services safe?

## Our findings

### Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, following an incident where a patient fell in the practice, the team discussed the incident and agreed it would be beneficial to relocate the emergency bag from the second floor utility room to the a location on the first floor near the waiting room.

### Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies.

Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were all trained to child protection or child safeguarding level three and nurses and healthcare assistants to level two. All other staff were trained to a minimum child safeguarding level one.

- A notice in the waiting room and in treatment rooms advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local clinical commissioning group pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored and there were systems in place to monitor their use. Patient Group Directions (PGD) had been adopted by the practice to allow nurses to administer medicines in line with legislation. PGDs are written instructions for the supply or administration of medicines to groups of patients who may not be individually identified before presenting for treatment. Health care assistants were trained to administer vaccines and medicines against a patient specific direction (PSD) from a prescriber. A PSD is a written

## Are services safe?

instruction, from a qualified and registered prescriber for a medicine including the dose, route and frequency or appliance to be supplied or administered to a named patient after the prescriber has assessed the patient on an individual basis.

- We reviewed four personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

### Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty.

### Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the utility room.
- The practice had two shared defibrillators available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.
- The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

### Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 97.5% of the total number of points available, with a 9% exception reporting which was comparable to both the clinical commissioning group (CCG) average of 10% and the national average of 9%. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/15 showed:

- Performance for diabetes related indicators was 99% which was above the CCG average of 95% and the national average of 89%.
- The percentage of patients with hypertension (high blood pressure) having regular blood pressure tests was 82% which was slightly below both the CCG average of 85% and national average of 84%.
- Performance for mental health related indicators was 100% which was above both the CCG average of 97% and above the national average of 93%.

There was evidence of quality improvement including clinical audit.

- There had been seven clinical audits completed in the last two years, one of these was a completed audit where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result of clinical audit on implant fittings showed that booking follow up telephone calls at the implant fitting appointment increased the amount of calls answered by patients for follow up from the previous year.

Information about patients' outcomes was used to make improvements such as: working collaboratively with a neighbouring GP practice and accepting referrals for coil fittings as their neighbour practice did not currently have a female GP to facilitate this.

### Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, for those reviewing patients with long-term conditions. The practice had funded one of the nurses to complete a prescribing course and another nurse to complete a chronic disease management course.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the

# Are services effective?

## (for example, treatment is effective)

scope of their work. This included ongoing support, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. Most staff had received an appraisal within the last 12 months, however we noted that four of the nursing teams appraisals had lapsed this year. We were informed that this was due to staff sickness and they were all scheduled to receive an appraisal in the next three months.

- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training. The practice also participated in protected learning time which were held ten times throughout the year.

### Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a weekly and quarterly basis when care plans were routinely reviewed and updated for patients with complex needs.

### Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.

- When providing care and treatment for children and young patients, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

### Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol. Patients were signposted to the relevant service.
- A dietician was available on the premises and smoking cessation advice was available from the nursing team.

The practice's uptake for the cervical screening programme was 84%, which was comparable to both the CCG average of 84% and the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme and they ensured a female sample taker was available. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening. The practice's uptake for females aged between 50-70 years, screened for breast cancer in last 36 months was 78%, which was above both the CCG average of 77% and the national average of 72%. The practice's uptake for patients aged between 60-69 years, screened for bowel cancer in last 30 months was 62% which was comparable to the CCG average of 63% and above the national average of 58%.

Childhood immunisation rates for the vaccines given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccines given to

## Are services effective? (for example, treatment is effective)

under two year olds ranged from 76% to 96% compared to CCG averages of 72% to 96%. Childhood immunisation rates for the vaccines given to five year olds ranged from 81% to 98% compared to CCG averages of 90% to 95%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and

NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

# Are services caring?

## Our findings

### Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in treatment and consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 4 patient Care Quality Commission comment cards we received were positive about the care provided; however, two mentioned it was difficult to get appointments quickly with a chosen GP and one referred to poor customer service at reception although this did not align with other surveys and patients we spoke with on the day of our visit. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

Comment cards highlighted that patients were satisfied with the care provided by the practice and highlighted that patients' dignity and privacy was respected.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was comparable for its satisfaction scores on consultations with GPs and nurses. For example:

- 88% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 91% and national average of 89%.
- 90% of patients said the GP gave them enough time compared to the CCG average of 89% and national average of 87%.
- 97% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 97% and national average of 95%.

- 91% of patients said the last GP they spoke to was good at treating them with care and concern compared to the CCG average of 88% and national average of 85%.
- 84% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the CCG average of 92% and national average of 90%.
- 78% of patients said they found the receptionists at the practice helpful compared to the CCG average of 90% and national average of 87%.

### Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. However, results were below both local and national averages. For example:

- 81% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 89% and national average of 86%.
- 73% said the last GP they saw was good at involving them in decisions about their care compared to the CCG average of 85% and national average of 82%.
- 79% said the last nurse they saw was good at involving them in decisions about their care compared to the CCG average of 87% and national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translation services were available for patients who did not have English as a first language.
- Information leaflets were available in easy read format.
- The practice had a hearing loop in reception to assist patients with hearing aids.

### Patient and carer support to cope emotionally with care and treatment

## Are services caring?

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 91 patients as carers (1.5% of the practice list). Written information was

available to direct carers to the various avenues of support available to them including social prescribing. The practice displayed carers information such as leaflets and electronic notices on the health education screen in the waiting room.

Staff told us that if families had suffered bereavement, their usual GP contacted them. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and clinical commissioning group (CCG) to secure improvements to services where these were identified. For example, the practice participated in a CCG led initiative called Choice Plus which allowed additional emergency slots to be available for patients to be seen at either Gloucester Health Access Centre or Matson Lane Surgery. The appointments were triaged at the practice and available under strict criteria, this resulted in greater emergency appointment availability for patients.

- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccines available on the NHS as well as those only available privately.
- There were disabled facilities, a hearing loop and translation services available.
- The practice arranged daily nurse visits Great Western Court which was an intermediate care centre for older people, providing services for people following a stay in hospital or for those needing a period of rehabilitation while living in the community.
- Weekly meetings took place that included discussions of hospital admissions, hospital discharges and palliative care patients.

### Access to the service

The practice reception was open between 8.30am and 6.30pm on Monday to Friday. Between 8am and 8.30am every weekday telephone calls are picked up by the reception team and a duty doctor is on site to treat any medical emergencies. Appointments are available between 8.30am and 5.40pm. Extended surgery hours are also offered every Monday evening between 6.30pm and 8pm. In addition to pre-bookable appointments that could be booked up to six weeks in advance, urgent appointments were also available for patients that needed them.

Out of hours cover is provided by South Western Ambulance Service NHS Foundation Trust and can be accessed via NHS 111.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was above and comparable to local and national averages.

- 92% of patients were satisfied with the practice's opening hours compared to the CCG average of 81% and national average of 78%.
- 71% of patients said they could get through easily to the practice by phone compared to the CCG average of 84% and national average of 73%.

Patients told us on the day of the inspection that they were able to get urgent appointments when they needed them. Some comment cards commented on difficulties in getting routine appointments and having to wait between two to three weeks to see a particular GP.

The practice had a system in place to assess:

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

Patients requiring home visits were added to the GP morning list and the GP would telephone the patient prior to the home visit. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

### Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw information was available to help patients understand the complaints system.

# Are services responsive to people's needs?

(for example, to feedback?)

- There was a poster and complaint leaflets in the waiting area; details were also available on the practice's website.

We looked at 12 complaints received in the last 12 months and found that all complaints were dealt with in a timely manner, with openness and transparency. Lessons were learnt from individual concerns and complaints and also from analysis of trends and action was taken to as a result

to improve the quality of care. For example, a complaint was received from a patient who felt that it was difficult to get through to the practice by telephone, this aligned with patient survey feedback analysed by the practice. The practice investigated this and restructured the reception team working times to ensure that there were available to answer the phones at peak times.

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

## Our findings

### Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the reception office and waiting area and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

### Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

### Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included

support training for all staff on communicating with patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected patients reasonable support, truthful information and a verbal and written apology.
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so. We noted team away days were held annually.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

### Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through surveys and complaints received. The practice had tried on several occasions to recruit patient participation group (PPG) members through holding meetings in the waiting area to engage patients, recruitment drives on the health education screen and details on the practice website. The practice had also arranged three meetings for PPG members however, only one member attended each of these meetings. The practice were aware of the importance and benefits of having an active PPG and were currently recruiting when we inspected.
- The practice had gathered feedback from staff through staff meetings, appraisals and discussion. Staff told us

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

## Continuous improvement

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes

to improve outcomes for patients in the area. For example, the practice took part in a local social prescribing initiative whereby patients with non-medical issues, such as debt or loneliness could be referred by a GP to a single hub for assessment as to which alternative service might be of most benefit. The practice had funded one of the nurses to complete a prescribing course and another nurse to complete a chronic disease management course.
