Website: www.watersidemedical.co.uk

Date of inspection visit: 20 March 2018

Date of publication: 11/05/2018

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Ratings

Overall rating for this service

Good

Letter from the Chief Inspector of General Practice

This practice is rated as Good overall. (Previous inspection March 2016 – Good)

The key questions are rated as:

Are services safe? – Good

Are services effective? – Good

Are services caring? – Good

Are services responsive? – Good

Are services well-led? – Good

As part of our inspection process, we also look at the quality of care for specific population groups. The population groups are rated as:

Older People – Good

People with long-term conditions – Good

Families, children and young people – Good

Working age people (including those recently retired and students) – Good

People whose circumstances may make them vulnerable – Good

People experiencing poor mental health (including people with dementia) – Good

We carried out an announced comprehensive inspection at Waterside Medical Centre on 17 March 2016. The overall rating for the practice was good. However the key

question Safe was rated as requires improvement. The full comprehensive report can be found by selecting the Waterside Medical Centre ‘all reports’ link on our website at www.cqc.org.uk.

This inspection was an announced comprehensive inspection carried out on 20 March 2018

to confirm that the practice had carried out their plan to meet the legal requirements in relation to the breaches in regulations that we identified in our previous inspection on 17 March 2016. This report covers our findings in relation to those requirements and additional improvements made since our last inspection.

- The practice had clear systems to manage risk so that safety incidents were less likely to happen. When incidents did happen, the practice learned from them and improved their processes.
- The practice routinely reviewed the effectiveness and appropriateness of the care it provided. It ensured that care and treatment was delivered according to evidence-based guidelines.
- Staff involved and treated patients with compassion, kindness, dignity and respect.
- Patients found the appointment system easy to use and reported that they were able to access care when they needed it.
- There was a strong focus on continuous learning and improvement at all levels of the organisation.

Summary of findings

Professor Steve Field (CBE FRCP FFPH FRCGP)

Chief Inspector of General Practice

Waterside Medical Centre

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC lead inspector.
The team included a GP specialist adviser.

Background to Waterside Medical Centre

Waterside Medical Centre is located in Southall in the London Borough of Ealing and provides care from a purpose built building to around 4,694 registered patients, as well as delivering care to patients who have been de-registered from other practices in the CCG (part of the Violent Patient Scheme). Services are provided under an Alternative Provider Medical Services (APMS) contract with NHS England and are part of the Ealing Clinical Commissioning Group (CCG).

The practice is part of Network Healthcare Solutions Limited, a provider of primary and community health services. The practice employs two full time salaried GPs, one male and one female. The medical team also include two GP registrars. The GPs undertake a combined total of 12 sessions per week. There are two practice nurses and one healthcare assistant. The practice team includes a practice manager and five administrative staff. Network Health Solutions Limited have an executive management team that provides both operational and clinical support to the practice.

The practice hosts F2 medical students from Imperial College.

Regulated activities are delivered to the patient population from the following address:

Tyler Road

Southall

Middlesex

UB2 4XQ

Tel: 020 8574 4454

The practice has a website that contains comprehensive information about what they do to support their patient population and the in house and online services offered:

Website: www.watersidemedical.co.uk

The practice is open between 8am to 6.30pm Monday to Friday. The practice operates extended hours between 6.30pm and 8pm on Monday and Thursday and between 8am to 10am on Saturdays. Appointments are from 8am to 11.30am every morning and 3pm to 6pm daily. The details of the out-of-hours service are communicated in a recorded message accessed by calling the practice when it is closed and on the practice website.

The age profile of the practice population is broadly in line with the CCG averages. Information taken from Public Health England placed the area in which the practice is located in the 2nd most deprived decile (from a possible range of between 1 and 10). In general, people living in more deprived areas tend to have greater need for health services.

Are services safe?

Our findings

At our previous inspection on 17 March 2016, we rated the practice as requires improvement for providing safe services as the arrangements in respect of fire risk assessments were not carried

out, there were no effective systems to ensure medical devices were within use by dates and the practice had not carried out a risk assessment for lack of having defibrillator (AED) on the premises.

These arrangements had significantly improved when we undertook a follow up inspection on 20 March 2018. The practice is now rated as good for providing safe services.

Safety systems and processes

The practice had clear systems to keep patients safe and safeguarded from abuse.

- The practice had a suite of safety policies including adult and child safeguarding policies which were regularly reviewed and communicated to staff. Staff received safety information for the practice as part of their induction and refresher training. Policies were regularly reviewed and were accessible to all staff, including locums. They outlined clearly who to go to for further guidance.
- There was a system to highlight vulnerable patients on records and a risk register of vulnerable patients.
- The practice worked with other agencies to support patients and protect them from neglect and abuse. Staff took steps to protect patients from abuse, neglect, harassment, discrimination and breaches of their dignity and respect.
- All staff received up-to-date safeguarding and safety training appropriate to their role. They knew how to identify and report concerns. Reports and learning from safeguarding incidents were available to staff. Staff who acted as chaperones were trained for the role and had received a DBS check.
- The practice carried out staff checks, including checks of professional registration where relevant, on recruitment and on an ongoing basis. Disclosure and Barring Service (DBS) checks were undertaken where required.

checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).

- There was an effective system to manage infection prevention and control.
- There were systems for safely managing healthcare waste.
- The practice ensured that facilities and equipment were safe and that equipment was maintained according to manufacturers' instructions.

Risks to patients

There were adequate systems to assess, monitor and manage risks to patient safety.

- There were arrangements for planning and monitoring the number and mix of staff needed. There was an effective approach to managing staff absences and for responding to epidemics, sickness, holidays and busy periods.
- There was an effective induction system for temporary staff tailored to their role.
- At our previous inspection on 17 March 2016. We found that the practice did not have a defibrillator and had not carried out a risk assessment to mitigate the reasons on not keeping one on site. During this inspection we found that the practice had carried out a risk assessment as to whether they needed to have a defibrillator available on the premises. The practice had carried out a comprehensive risk assessment and concluded that they did not require a defibrillator on the premises because they had identified the risk as low. The CQC GP clinical advisor felt that the arrangements were safe.
- At our previous inspection the practice did not have up to date fire risk assessments and COSHH. During this inspection we found that the practice had carried out full risk assessments and they had systems to ensure these were reviewed annually.
- Staff understood their responsibilities to manage emergencies on the premises and to recognise those in need of urgent medical attention. Clinicians knew how to identify and manage patients with severe infections including sepsis.

Are services safe?

- When there were changes to services or staff the practice assessed and monitored the impact on safety.

Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment to patients.

- Individual care records were written and managed in a way that kept patients safe. The care records we saw showed that information needed to deliver safe care and treatment was available to relevant staff in an accessible way.
- The practice had systems for sharing information with staff and other agencies to enable them to deliver safe care and treatment. There was a documented approach to the management of test results.
- Referral letters included all of the necessary information.

Safe and appropriate use of medicines

The practice had reliable systems for appropriate and safe handling of medicines.

- The systems for managing and storing medicines, including vaccines, medical gases, and emergency medicines and equipment minimised risks. The practice had carried out an appropriate risk assessment to identify medicines that it should stock. The practice kept prescription stationery securely and monitored its use.
- At our previous inspection of 17 March 2016 we found some medical devices that had expired. During this inspection we found that the practice had provided training to their nursing staff and appointed a lead person to be responsible for checking the medicines and equipment. We found that the system was being followed and all medicines and medical devices were within use by dates.
- Staff prescribed, administered or supplied medicines to patients and gave advice on medicines in line with legal

requirements and current national guidance. The practice had reviewed its antibiotic prescribing and taken action to support good antimicrobial stewardship in line with local and national guidance.

- Patients' health was monitored to ensure medicines were being used safely and followed up on appropriately. The practice involved patients in regular reviews of their medicines.
- The number of antibacterial prescription items prescribed per Specific Therapeutic group Age-sex Related Prescribing Unit (STAR PU) was 0.83 which was comparable to the CCG average 0.82 and nationally 0.98.

Track record on safety

The practice had a good safety record.

- There were comprehensive risk assessments in relation to safety issues.
- The practice monitored and reviewed activity. This helped it to understand risks and gave a clear, accurate and current picture that led to safety improvements.

Lessons learned and improvements made

The practice learned and made improvements when things went wrong.

- There was a system and policy for recording and acting on significant events and incidents. Staff understood their duty to raise concerns and report incidents and near misses. Leaders and managers supported them when they did so.
- There were adequate systems for reviewing and investigating when things went wrong. The practice learned, shared lessons, identified themes and took action to improve safety in the practice. For example we saw that the practice had a protocol they followed to ensure all staff and patients attending the practice were safe from harm.
- There was a system for receiving and acting on safety alerts. The practice learned from external safety events as well as patient and medicine safety alerts.

Are services effective?

(for example, treatment is effective)

Our findings

At our previous inspection on 17 March 2016, we rated the practice as good for providing effective services. The practice is still rated as good for providing effective services and all of the population groups are rated good.

Effective needs assessment, care and treatment

The practice had systems to keep clinicians up to date with current evidence-based practice. We saw that clinicians assessed needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

- Patients' immediate and ongoing needs were fully assessed. This included their clinical needs and their mental and physical wellbeing.
- The average daily quantity of Hypnotics (a sleep-inducing drug) prescribed (practice 0.45) was comparable to other practices in the CCG average of 0.59 and nationally of 0.91.
- We saw no evidence of discrimination when making care and treatment decisions.
- Staff used appropriate tools to assess the level of pain in patients.
- Staff advised patients what to do if their condition got worse and where to seek further help and support.

Older people:

- Older patients who are frail or may be vulnerable received a full assessment of their physical, mental and social needs. The practice used an appropriate tool to identify patients aged 65 and over who were living with moderate or severe frailty. Those identified as being frail had a clinical review including a review of medication.
- Patients aged over 75 were invited for a health check. If necessary they were referred to other services such as voluntary services and supported by an appropriate care plan
- The practice followed up on older patients discharged from hospital. It ensured that their care plans and prescriptions were updated to reflect any extra or changed needs.

- Staff had appropriate knowledge of treating older people including their psychological, mental and communication needs.

People with long-term conditions:

- Patients with long-term conditions had a structured annual review to check their health and medicines needs were being met. For patients with the most complex needs, the GP worked with other health and care professionals to deliver a coordinated package of care.
- Staff who were responsible for reviews of patients with long term conditions had received specific training.
- GPs followed up patients who had received treatment in hospital or through out of hours services for an acute exacerbation of asthma.
- The percentage of patients with asthma, on the register, who have had an asthma review in the preceding 12 months that includes an assessment of asthma control using the three Royal College of Physicians (RCP) questions was 76% (CCG 79%, National 76%).

Families, children and young people:

- Childhood immunisations were carried out in line with the national childhood vaccination programme. Uptake rates for the vaccines given were in line with the target percentage of 90%.
- The practice had arrangements to identify and review the treatment of newly pregnant women on long-term medicines. These patients were provided with advice and post-natal support in accordance with best practice guidance.

Working age people (including those recently retired and students):

The practice's uptake for cervical screening was 64%, which was in line with the 72% coverage target for the national screening programme.

- The practices' uptake for breast and bowel cancer screening was in line the national average.
- The practice had systems to inform eligible patients to have the meningitis vaccine, for example before attending university for the first time.

Are services effective?

(for example, treatment is effective)

- Patients had access to appropriate health assessments and checks including NHS checks for patients aged 40-74. There was appropriate follow-up on the outcome of health assessments and checks where abnormalities or risk factors were identified.

People whose circumstances make them vulnerable:

- End of life care was delivered in a coordinated way which took into account the needs of those whose circumstances may make them vulnerable.
- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.

People experiencing poor mental health (including people with dementia):

- 100% of patients diagnosed with dementia had their care reviewed in a face to face meeting in the previous 12 months. This was above the CCG average of 88% and the national average of 83%.
- Patients at risk of dementia were identified and offered an assessment to detect possible signs of dementia. When dementia was suspected there was an appropriate referral for diagnosis.
- 95% of patients diagnosed with schizophrenia, bipolar affective disorder and other psychoses had a comprehensive, agreed care plan documented in the previous 12 months. This was above the CCG average of 92% and the national average of 90%.
- The practice specifically considered the physical health needs of patients with poor mental health and those living with dementia. For example 98% of patients experiencing poor mental health had received discussion and advice about alcohol consumption. This was above the CCG average of 93% and national average of 91%.

Monitoring care and treatment

The practice had a comprehensive programme of quality improvement activity and routinely reviewed the effectiveness and appropriateness of the care provided.

The most recent published Quality Outcome Framework (QOF) results were 98% of the total number of points available compared with the clinical commissioning group (CCG) average of 96% and national average of 95%. The

overall exception reporting rate was 11 % this was comparable with the CCG average of 9.2% a national average of 9.9%. (QOF is a system intended to improve the quality of general practice and reward good practice. Exception reporting is the removal of patients from QOF calculations where, for example, the patients decline or do not respond to invitations to attend a review of their condition or when a medicine is not appropriate.) The practice was not an outlier for any indicators.

- The practice was actively involved in quality improvement activity. For example reviewing the care of patients with irregular heartbeat (arrhythmia) to ensure they had the correct checks and medicines review.

Effective staffing

Staff had the skills, knowledge and experience to carry out their roles. For example, staff whose role included immunisation and taking samples for the cervical screening programme had received specific training and could demonstrate how they stayed up to date.

- The practice understood the learning needs of staff and provided protected time and training to meet them. Up to date records of skills, qualifications and training were maintained. Staff were encouraged and given opportunities to develop.
- The practice provided staff with ongoing support. This included an induction process, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and support for revalidation. The induction process for healthcare assistants included the requirements of the Care Certificate. The practice ensured the competence of staff employed in advanced roles by audit of their clinical decision making, including non-medical prescribing.
- There was a clear approach for supporting and managing staff when their performance was poor or variable.

Coordinating care and treatment

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

- We saw records that showed that all appropriate staff, including those in different teams, services and organisations, were involved in assessing, planning and delivering care and treatment.

Are services effective?

(for example, treatment is effective)

- Patients received coordinated and person-centred care. This included when they moved between services, when they were referred, or after they were discharged from hospital. The practice worked with patients to develop personal care plans that were shared with relevant agencies.
- The practice ensured that end of life care was delivered in a coordinated way which took into account the needs of different patients, including those who may be vulnerable because of their circumstances.

Helping patients to live healthier lives

Staff were consistent and proactive in helping patients to live healthier lives.

- The practice identified patients who may be in need of extra support and directed them to relevant services. This included patients in the last 12 months of their lives, patients at risk of developing a long-term condition and carers.

- Staff encouraged and supported patients to be involved in monitoring and managing their health.
- Staff discussed changes to care or treatment with patients and their carers as necessary.
- The practice supported national priorities and initiatives to improve the population's health, for example, stop smoking campaigns, tackling obesity.

Consent to care and treatment

The practice obtained consent to care and treatment in line with legislation and guidance.

- Clinicians understood the requirements of legislation and guidance when considering consent and decision making.
- Clinicians supported patients to make decisions. Where appropriate, they assessed and recorded a patient's mental capacity to make a decision.
- The practice monitored the process for seeking consent appropriately.

Are services caring?

Our findings

At our previous inspection on 17 March 2016, we rated the practice as good for providing caring services. The practice is still rated as good for providing caring services and all of the population groups are rated good.

Kindness, respect and compassion

Staff treated patients with kindness, respect and compassion.

- Staff understood patients' personal, cultural, social and religious needs.
- The practice gave patients timely support and information.
- Reception staff knew that if patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.
- All of the 26 patient Care Quality Commission comment cards we received were positive about the service experienced. This is in line with the results of the NHS Friends and Family Test and other feedback received by the practice.
- We spoke to members of the patient participation group who told us they had no concerns with the practice.

Results from the July 2017 annual national GP patient survey showed patients felt they were treated with compassion, dignity and respect. Three hundred and eighty one surveys were sent out and 92 were returned. This represented a response rate of 24%. The practice was comparable for its satisfaction scores on consultations with GPs and nurses. For example:

- 87% of patients who responded said the GP was good at listening to them compared with the clinical commissioning group (CCG) average of 85% and the national average of 89%.
- 95% of patients who responded said they had confidence and trust in the last GP they saw; CCG - 93%; national average - 95%.
- 80% of patients who responded said the last GP they spoke to was good at treating them with care and concern; CCG - 80%; national average - 85%.

- 84% of patients who responded said the nurse was good at listening to them; (CCG) - 85%; national average - 91%.
- 79% of patients who responded said the last nurse they spoke to was good at treating them with care and concern; CCG - 83%; national average - 91%.

Involvement in decisions about care and treatment

Staff helped patients be involved in decisions about their care and were aware of the Accessible Information Standard (a requirement to make sure that patients and their carers can access and understand the information they are given):

- Interpretation services were available for patients who did not have English as a first language. We saw notices in the reception areas, including in languages other than English, informing patients this service was available. Patients were also told about multi-lingual staff who might be able to support them.
- Staff communicated with patients in a way that they could understand, for example, communication aids and easy read materials were available.
- Staff helped patients and their carers find further information and access community and advocacy services. They helped them ask questions about their care and treatment.

The practice proactively identified patients who were carers. The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 54 patients as carers which was about 2% of the practice list. A member of staff acted as a carers' champion to help ensure that the various services supporting carers were coordinated and effective.

- Staff told us that if families had experienced bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages:

Are services caring?

- 82% of patients who responded said the last GP they saw was good at explaining tests and treatments compared with the clinical commissioning group (CCG) average of 82% and the national average of 86%.
- 73% of patients who responded said the last GP they saw was good at involving them in decisions about their care; CCG - 76%; national average - 82%.
- 78% of patients who responded said the last nurse they saw was good at explaining tests and treatments; CCG - 83%; national average - 90%.

Privacy and dignity

The practice respected patients' privacy and dignity.

- Staff recognised the importance of patients' dignity and respect.
- Conversations with receptionists could not be overheard by patients in the waiting room.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

At our previous inspection on 17 March 2016, we rated the practice as good for providing responsive services. The practice is still rated as good for providing responsive services and all of the population groups are rated good.

Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

- The practice understood the needs of its population and tailored services in response to those needs. (For example extended opening hours, online services such as repeat prescription requests, advanced booking of appointments, advice services for common ailments.
- The facilities and premises were appropriate for the services delivered.
- The practice made reasonable adjustments when patients found it hard to access services.
- Care and treatment for patients with multiple long-term conditions and patients approaching the end of life was coordinated with other services.

Older people:

- All patients had a named GP who supported them in whatever setting they lived, whether it was at home or in a care home or supported living scheme.
- The practice was responsive to the needs of older patients, and offered home visits and urgent appointments for those with enhanced needs. The GPs and practice nurses also accommodated home visits for those who had difficulties getting to the practice due to limited local public transport availability.
- There was a medicines delivery service for housebound patients.

People with long-term conditions:

- Patients with a long-term condition received an annual review to check their health and medicines needs were being appropriately met. Multiple conditions were reviewed at one appointment, and consultation times were flexible to meet each patient's specific needs.

- The practice held regular meetings with the local district nursing team to discuss and manage the needs of patients with complex medical issues.

Families, children and young people:

- We found there were systems to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of accident and emergency (A&E) attendances. Records we looked at confirmed this.
- All parents or guardians calling with concerns about a child under the age of 18 were offered a same day appointment when necessary.

Working age people (including those recently retired and students):

- The needs of this population group had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care. For example, extended opening hours and Saturday appointments.
- Telephone and web GP consultations were available which supported patients who were unable to attend the practice during normal working hours.

People whose circumstances make them vulnerable:

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.

People experiencing poor mental health (including people with dementia):

- Staff interviewed had a good understanding of how to support patients with mental health needs and those patients living with dementia.
- The practice held GP led dedicated monthly mental health and dementia clinics. Patients who failed to attend were proactively followed up by a phone call from a GP.

Timely access to care and treatment

Patients were able to access care and treatment from the practice within an acceptable timescale for their needs.

- Patients had timely access to initial assessment, test results, diagnosis and treatment.

Are services responsive to people's needs?

(for example, to feedback?)

- Waiting times, delays and cancellations were minimal and managed appropriately.
- Patients with the most urgent needs had their care and treatment prioritised.
- Patients reported that the appointment system was easy to use.

Results from the July 2017 annual national GP patient survey showed that patients' satisfaction with how they could access care and treatment was comparable to local and national averages. This was supported by observations on the day of inspection and completed comment cards. Three hundred and eighty one surveys were sent out and 92 were returned. This represented a response rate of 24% .

- 89% of patients who responded were satisfied with the practice's opening hours compared with the clinical commissioning group (CCG) average of 74% and the national average of 80%.
- 71% of patients who responded said they could get through easily to the practice by phone; CCG – 69%; national average - 71%.

- 72% of patients who responded said their last appointment was convenient; CCG - 67%; national average - 73%.

Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

- Information about how to make a complaint or raise concerns was available.
- The complaint policy and procedures were in line with recognised guidance. Four complaints were received in the last year. We reviewed these and found that they were satisfactorily handled in a timely way.
- The practice learned lessons from individual concerns and complaints and also from analysis of trends. It acted as a result to improve the quality of care. For example the practice updated their ear syringing consent form to ensure all patients understood risks associated with the procedure following a complaint from a patient.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

At our previous inspection on 17 March 2016, we rated the practice as good for providing well led services. The practice is still rated as good for well-led.

Leadership capacity and capability

Leaders had the capacity and skills to deliver high-quality, sustainable care.

- Leaders from the Network Health Solutions Limited demonstrated they had the experience, capability and integrity to deliver the practice strategy and address risks to it.
- They were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.
- Leaders at all levels were visible and approachable. They worked closely with staff and others to make sure they prioritised compassionate and inclusive leadership.
- Staff we spoke with told us that the leaders of the organisation were available when required and they visited the site on a regular basis.
- The organisation had effective processes to develop leadership capacity and skills, including planning for the future leadership of the practice.

Vision and strategy

The practice had a clear vision and credible strategy to deliver high quality, sustainable care.

- There was a clear vision and set of values. The practice had a realistic strategy and supporting business plans to achieve priorities.
- The practice developed its vision, values and strategy jointly with patients, staff and external partners.
- Staff were aware of and understood the vision, values and strategy and their role in achieving them.
- The strategy was in line with health and social priorities across the region. The practice planned its services to meet the needs of the practice population.
- The practice monitored progress against delivery of the strategy.

Culture

The practice had a culture of high-quality sustainable care.

- Staff stated they felt respected, supported and valued. They were proud to work in the practice.
- The practice focused on the needs of patients.
- Leaders and managers acted on behaviour and performance inconsistent with the vision and values.
- Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the duty of candour.
- Staff we spoke with told us they were able to raise concerns and were encouraged to do so. They had confidence that these would be addressed.
- There were processes for providing all staff with the development they need. This included appraisal and career development conversations. All staff received regular annual appraisals in the last year. Staff were supported to meet the requirements of professional revalidation where necessary.
- Clinical staff, including nurses, were considered valued members of the practice team. They were given protected time for professional development and evaluation of their clinical work.
- There was a strong emphasis on the safety and well-being of all staff.
- The practice actively promoted equality and diversity. Staff had received equality and diversity training. Staff felt they were treated equally.
- There were positive relationships between staff and teams.

Governance arrangements

There were clear responsibilities, roles and systems of accountability to support good governance and management.

- Structures, processes and systems to support good governance and management were clearly set out,

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

understood and effective. The governance and management of partnerships, joint working arrangements and shared services promoted interactive and co-ordinated person-centred care.

- Staff were clear on their roles and accountabilities including in respect of safeguarding and infection prevention and control
- Practice leaders had established proper policies, procedures and activities to ensure safety and assured themselves that they were operating as intended.

Managing risks, issues and performance

There were clear and effective processes for managing risks, issues and performance.

- There was an effective, process to identify, understand, monitor and address current and future risks including risks to patient safety.
- The practice had processes to manage current and future performance. Performance of employed clinical staff could be demonstrated through audit of their consultations, prescribing and referral decisions. Practice leaders had oversight of national and local safety alerts, incidents, and complaints.
- Clinical audit had a positive impact on quality of care and outcomes for patients. There was clear evidence of action to change practice to improve quality.
- The practice had plans in place and had trained staff for major incidents.
- The practice implemented service developments and where efficiency changes were made this was with input from clinicians to understand their impact on the quality of care.

Appropriate and accurate information

The practice acted on appropriate and accurate information.

- Quality and operational information was used to ensure and improve performance. Performance information was combined with the views of patients.
- Quality and sustainability were discussed in relevant meetings where all staff had sufficient access to information.

- The practice used performance information which was reported and monitored and management and staff were held to account.
- The information used to monitor performance and the delivery of quality care was accurate and useful. There were plans to address any identified weaknesses.
- The practice used information technology systems to monitor and improve the quality of care.
- The practice submitted data or notifications to external organisations as required.
- There were robust arrangements in line with data security standards for the availability, integrity and confidentiality of patient identifiable data, records and data management systems.

Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

- A full and diverse range of patients' staff and external partners' views and concerns were encouraged, heard and acted on to shape services and culture.
- There was an active patient participation group.
- The service was transparent, collaborative and open with stakeholders about performance.

Continuous improvement and innovation

There was evidence of systems and processes for learning, continuous improvement and innovation.

- There was a focus on continuous learning and improvement at all levels within the practice. We saw that the practice had protected time for learning.
- Staff knew about improvement methods and had the skills to use them.
- The practice made use of internal and external reviews of incidents and complaints. Learning was shared and used to make improvements.
- Leaders and managers encouraged staff to take time out to review individual and team objectives, processes and performance.
