Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Riverside Medical Practice on 8 December 2015. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand.
- Patients said they found it easy to make an appointment with a named GP and that there was continuity of care, with urgent appointments available the same day.

- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the Duty of Candour. This means providers must be open and transparent with service users about their care and treatment, including when it goes wrong.

We saw one area of outstanding practice:

- The practice provided acupuncture for patients suffering from back pain and to help alleviate symptoms of the menopause.
- The practice provided a dermoscopy service within the practice to reduce the number of referrals to the acute hospital service.
- The practice provided joint care for those suffering from substance misuse. One of the GPs had undergone further training in managing this group of patient.

Summary of findings

The areas where the provider should make improvement are:

- Ensure recruitment arrangements include all necessary employment checks for all staff.
- Ensure the lessons learn from significant event analysis is shared with all staff.

- Ensure staff meetings and action from these meetings are recorded.

Ensure staff are clear about who is responsible for lead roles and who to contact when the named person is not working.

Professor Steve Field (CBE FRCP FFPH FRCGP)
Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information, a verbal and written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Good

Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework showed patient outcomes were at or above average for the locality and compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for staff.
- Staff worked with multidisciplinary teams to understand and meet the range and complexity of patients' needs.

Good

Are services caring?

The practice is rated as good for providing caring services.

- Data from the National GP Patient Survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

Summary of findings

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified. Examples of these were regular ward round visits to the local care homes, medicines management and improving the care of patients with learning disabilities.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to this.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice pro-actively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

Good

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as good for the care of older people.

- The practice offered pro-active, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs. The practice also provided input into thirteen care home with weekly visits to three.
- Every patient over 75 had a named GP.
- Patients who were carers were identified and added to the carers' register. Information about support groups and useful contact details was provided.

Good

People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- The proportion of patients on the diabetes register with a record of foot examinations in the preceding 12 months was 92% which was below the national average of 88%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- 85%

Good

Summary of findings

- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The proportion of women aged 24 -64 who had had cervical screening performed was 82 % above the national average of 81%.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care. The practice offered early morning appointments.
- The practice was pro-active in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

Good

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with multi-disciplinary teams in the case management of vulnerable people.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

Summary of findings

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- <>
The proportion of patients with mental illness and other psychoses who had had a comprehensive agreed care plan documents in the last 12 months was 100% compared with the national average of 88%.
- The practice regularly worked with multi-disciplinary teams in the case management of people experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

Good

Summary of findings

What people who use the service say

The national GP patient survey results published on July 2015. The results showed the practice was performing in line with local and national averages. 360 survey forms were distributed and 103 were returned. This represented 3% of the practice's patient list.

- 88% found it easy to get through to this surgery by phone compared to a CCG average of 73% and a national average of 73%.
- 81% were able to get an appointment to see or speak to someone the last time they tried (CCG average 85%, national average 85%).
- 90% described the overall experience of their GP surgery as fairly good or very good (CCG average 85%, national average 85%).

- 81% said they would definitely or probably recommend their GP surgery to someone who has just moved to the local area (CCG average 76%, national average 78%).

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 22 comment cards which were all positive about the standard of care received. Patients commented that they found it easy to make appointments and they found the staff to be caring and attentive to their needs.

We spoke with 10 patients during the inspection and four members of the patient participation group (PPG). All 14 patients said they were happy with the care they received and thought staff were approachable, committed and caring. We saw that the results from the practices' friends and families test were positive.

Riverside Medical Practice

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser, a second CQC inspector, a practice manager specialist adviser and an Expert by Experience.

Background to Riverside Medical Practice

Riverside Medical practice is in the centre of Stockton and has high levels of deprivation, as a consequence there is are high levels of long term conditions and drug and alcohol issues. There are 3800 patients on the practice list and the majority of patients are of white British background. There are a higher proportion of patients between the ages of 19 to 60 on the patient list compared to the practice average across England.

There are two GP partners, one (female), and one (male). There are also three nurse practitioners, one practice nurse and one health care assistant (all female). There is a practice manager who is supported by reception, medicines management, and secretarial and other administration staff including an apprentice.

The practice is open from 8 am to 6 pm, Monday to Friday. The practice provides extended hour between 7am and 8 am four days per week. We saw that appointments can be booked by the telephone, walking into the practice and on line. Patients requiring a GP outside of normal working hours are advised to contact the GP out of hour's service provided by Northern doctors via the NHS 111 service. The practice has a General Medical Service (GMS) contract.

Why we carried out this inspection

We inspected this service as part of our new comprehensive inspection programme.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on the 8 December 2015. During our visit we:

- Spoke with a range of staff, GPs, nurses and administration staff and spoke with patients who used the service.
- Observed how patients were being cared for and talked with carers and family members
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

Detailed findings

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people

- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system.
- The practice carried out a thorough analysis of the significant events. However some staff told us that monitoring and learning from significant event analysis (SEAs) was not always shared with all staff. The minutes of meetings were limited and we were unable check this or establish if SEAs were a standing agenda item.

We reviewed safety records, incident reports, national patient safety alerts and minutes of meetings where these were discussed. Lessons were shared to make sure action was taken to improve safety in the practice. For example, ensuring patient's demographic information was checked and the process improved.

When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information, a verbal and written apology and were told about any actions to improve processes to prevent the same thing happening again.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse that reflected relevant legislation and local requirements and policies were accessible to all staff. The policies outlined who to contact for further guidance if staff had concerns about a patient's welfare. We saw that not all staff were able to locate this policy as it had recently been updated but they were aware of the process. There was a lead member of staff for safeguarding. However we saw that the nominated lead only worked two days a week and there was not another named lead to support this member of staff. The GPs attended safeguarding meetings when possible and always provided reports

where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training relevant to their role. GPs were trained to Safeguarding level 3.

- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service check (DBS check). (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable). We saw that all staff were being DBS checked to allow them in the future to undertake chaperone duties following training. Some administration staff told us that in the past they had undertaken these duties without formal training.
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency drugs and vaccinations, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing and security). The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Prescription pads were securely stored and there were systems in place to monitor their use. One of the nurses had qualified as an Independent Prescriber and could therefore prescribe medicines for specific clinical conditions. However we saw that mentorship and support from the medical staff for this extended role was provided from another service where the member of staff worked. It was unclear if there was communication with this service and the member of staff to ensure the mentorship was adequate for the needs of the member of staff or the practice. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. The practice had a system for production of

Are services safe?

Patient Specific Directions to enable Health Care Assistants (HCA) to administer vaccinations after specific training when a doctor or nurse were on the premises. The member of staff had received training and observation of competency in the past. However we saw that there had been no recent observation of the HCA undertaking these procedures.

- We reviewed four personnel files and found However we saw that the files were not orderly or easy to follow when establishing if the recruitment process was followed, also there were some gaps in the process such as checking if qualifications and adequate references had been received.
- There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of

substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure that enough staff were on duty and we saw that staff provided cover for each other during sickness and holidays.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and fit for use.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met peoples' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 99.3% of the total number of points available, with 14.2 % exception reporting. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects). This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/15 showed;

- Performance for diabetes related indicators was above the CCG and national average. The practice had achieved 85 out of 86 points, a percentage of 98%.
- The percentage of patients with hypertension having regular blood pressure tests was 85% which was better than the national average 83%.
- Performance for mental health related indicators was better than the CCG and national average at 100%.

Clinical audits demonstrated quality improvement.

- There had been two clinical audits completed in the last two years, both of these were completed audits where the improvements made were implemented and monitored.

- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result included prophylactic prescribing of antibiotics prior to certain minor surgical procedures.

Information about patients' outcomes was used to make improvements such as; early referral to pulmonary rehabilitation of patients suffering from Chronic Obstructive Airways disease (COPD).

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. It covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality. The practice also engaged in the local apprentice scheme and had training and support process in place.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff for example, for those reviewing patients with long-term conditions. Staff administering vaccinations and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. However we saw that observation of competency had not recently been undertaken for the HCA. Staff who administered vaccinations could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support during sessions, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. Staff had had an appraisal within the last 12 months. However we noted that one of the nurse practitioners had not had an appraisal this year. The clinical supervision in the practice for nurses was in the form of peer review and was not documented.

Are services effective?

(for example, treatment is effective)

- Staff received training that included: safeguarding, fire procedures, and basic life support and information governance awareness. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results. Information such as NHS patient information leaflets were also available.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care services to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. We saw evidence that multi-disciplinary team meetings took place on a quarterly basis and that care plans were routinely reviewed and updated.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.

- The process for seeking consent was monitored through records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support.

- These included patients in the last 12 months of their lives, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation and substance misuse. Patients were then signposted to the relevant service.
- Smoking cessation advice was available from a local support group. One of the GPs had undertaken specialist training in substance misuse and the practice held shared clinics at the practice with the local addiction service.

The practice's uptake for the cervical screening programme was 82%, which was above the CCG average of 81% and the national average of 81%. There was a policy to offer telephone and text reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 80% to 91% and five year olds from 82% to 98%.

Flu vaccination rates for the over 65s were 77%, and at risk groups 57%. These were also above the CCG and national averages.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for people aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed and they could offer them a private room to discuss their needs. We saw that the reception staff knew patients by name.

All of the 22 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We spoke with four members of the patient participation group. They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was above average for its satisfaction scores on consultations with GPs and nurses. For example:

- 94% said the GP was good at listening to them compared to the CCG average of 88% and national average of 89%.
- 91% said the GP gave them enough time (CCG average 87%, national average 87%).
- 99% said they had confidence and trust in the last GP they saw (CCG average 95%, national average 95%)
- 91% said the last GP they spoke to was good at treating them with care and concern (CCG average 85%, national average 85%).

- 94% said the last nurse they spoke to was good at treating them with care and concern (CCG average 92%, national average 90%).
- 93% said they found the receptionists at the practice helpful (CCG average 89%, national average 87%)

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback on the comment cards we received was also positive and aligned with these views.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were above local and national averages. For example:

- 93% said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 86% and national average of 86%.
- 84% said the last GP they saw was good at involving them in decisions about their care (CCG average 82%, national average 81%)
- 93% said the last nurse they saw was good at involving them in decisions about their care (CCG average 88%, national average 85%)

Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.

Patient and carer support to cope emotionally with care and treatment

Notices in the patient waiting room told patients how to access a number of support groups and organisations.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 1% of the practice list as carers. Written information was available to direct carers to the various avenues of support available to them.

Are services caring?

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. Examples of these were improving the management of patients with learning disabilities and reducing the waste of medicines.

- The practice offered a 'Commuter's Clinic' on a Monday to Friday excluding Wednesday between 7.00am and 8.00am for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who would benefit from these.
- Same day appointments were available for children and those with serious medical conditions.
- Patients were able to receive travel vaccinations available on the NHS.
- There were disabled facilities, a hearing loop and translation services available.
- Patients had access to a counsellor in the practice one day a week and also an alcohol support worker. There were strong links to local support groups including a dementia support hub which members of the PPG linked with keeping the practice updated about support opportunities. The practice had also improved access to parking and the building for those patients with disabilities.

Access to the service

The practice was open between 8am and 6pm Monday to Friday. Appointments were between these times daily. Extended surgery hours were offered at the following times

7am to 8am week days except Wednesdays. In addition to pre-bookable appointments that could be booked up to six weeks in advance, urgent appointments were also available for people that needed them.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was above local and national averages.

- 79% of patients were satisfied with the practice's opening hours compared to the CCG average of 76% and national average of 75%.
- 88% patients said they could get through easily to the surgery by phone (CCG average 73%, national average 73%).
- 72% patients said they always or almost always see or speak to the GP they prefer (CCG average 62%, national average 60%).

People told us on the day of the inspection that they were able to get appointments when they needed them.

Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice. However it was unclear if verbal complaints were always recorded.
- We saw that information was available to help patients understand the complaints system such as leaflets.

We looked at the one complaint received in the last 12 months and found this had been satisfactorily handled and dealt with in a timely way. We saw there was openness and transparency with dealing with the complaints.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was not displayed in the waiting area. However staff knew and understood the values of the practice.
- The practice had a strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff
- A comprehensive understanding of the performance of the practice was maintained
- There was a programme of continuous clinical and internal audit which was used to monitor quality and to make improvements
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions. However we saw that these were not always recorded.

Leadership and culture

The partners in the practice had the experience, capacity and capability to run the practice and ensure high quality care. They prioritise safe, high quality and compassionate care. The partners were visible in the practice and staff told us they were approachable and always took the time to listen to all members of staff.

The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents

When there were unexpected or unintended safety incidents:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology.
- It was unclear if the practice kept written records of verbal interactions as well as the written correspondence we saw.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings. However there were limited records of these meetings available.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident in doing so and felt supported if they did.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. There was an active PPG which met regularly, carried out patient surveys and submitted proposals for improvements to the practice management team and produced regular newsletters. For example, the PPG had introduced various improvements such as improved parking, landscaping around the building and disabled access to the practice. They were also members of the Stockton Dementia hub and went into local secondary schools to raise awareness of dementia. The group actively raised funds for the practice enabling them to purchase a range of equipment used in the care of patients.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

- The practice had gathered feedback from staff through regular discussion and meetings. We saw that the apprentice had introduced a patient suggestion box in reception. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

Continuous improvement

There was a strong focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area. We saw that both GPs had undertaken further training to provide them with expertise in cardiology and substance misuse.

The practice undertook dermoscopy reducing the number of unnecessary referrals to the acute hospitals. They also offered acupuncture for patients suffering from back pain and to help alleviate symptoms of the menopause.
