

Woodseats Medical Centre

Quality Report

4 Cobnar Road,
Woodseats,
Sheffield,
S8 8QB

Tel: 0114 2850140

Website: www.woodseatsmedicalcentre.nhs.uk

Date of inspection visit: 18 August 2016

Date of publication: 08/09/2016

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Woodseats Medical Centre on 18 August 2016. Overall the practice is rated as good.

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available.

- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had satisfactory facilities and was equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

The areas where the provider should make improvement are:

- Carry out a Legionella risk assessment.
- Improve governance around the complaints process.
- Include suitability of furnishings and equipment in the infection control audit and action as appropriate

Professor Steve Field (CBE FRCP FFPH FRCGP)
Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

Good

- There was an effective system in place for reporting and recording significant events and lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support and truthful information. On the day of inspection we noted that all complaints were acknowledged although not all of them were documented and the Parliamentary Health Service Ombudsman details were missing from the response letters. We were assured that these issues would be addressed.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Are services effective?

The practice is rated as good for providing effective services.

Good

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were at or above average compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Are services caring?

The practice is rated as good for providing caring services.

Good

- Data from the national GP patient survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.

Summary of findings

- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified. For example, through self-funding, the practice had invested in a new purpose built surgery within a Community Hub to improve health services for their local population.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had satisfactory facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand. When things went wrong patients received reasonable support and truthful information. We noted that all complaints were acknowledged although not all of the responses were documented and the Parliamentary Health Service Ombudsman details were missing from the response letters.
- The practice had improved patient access through the implementation of a 'Dr First' system whereby patients booked their appointment directly by speaking to a Doctor. This service was offered each day between 8.30-9.30am and ensures patients who want or need to be seen are seen on the same day.
- The 'Accessible Information' initiative had been implemented as part of the patient registration process.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.

Good

Summary of findings

- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.
- The practice was working collaboratively with other two local practices to share resources and develop patient services.

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.

Good

People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Performance for diabetes related indicators was similar to the CCG and national average. For example, the percentage of patients with diabetes, on the register, who had had influenza immunisation in the preceding 12 months was 96% (CCG, 96%; national average, 94%).
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.
- The practice had developed a patient focussed approach to chronic disease management with a Birthday Review System which gave patients information to enable them to take ownership of their condition whilst gaining a better understanding.

Good

Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.

Good

Summary of findings

- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The practice's uptake for the cervical screening programme was 97%, which was above the CCG average of 89% and the national average of 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives and health visitors and the practice had developed their own template for the assessment of a sick child.

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

Good

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

Summary of findings

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people living with dementia).

- 88% of patients diagnosed with dementia had their care reviewed in a face to face meeting in the last 12 months, which is comparable to the CCG (86%) and national average (84%).
- Performance for mental health related indicators was similar to the CCG and national average. For example, the percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive agreed care plan documented in the record in the preceding 12 months was 90% (CCG, 90%; national average, 88%)
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those living with dementia.
- The practice carried out advance care planning for patients living with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and those living with dementia.

Good

Summary of findings

What people who use the service say

The national GP patient survey results were published in 2016. The results showed the practice was performing in line with local and national averages. 238 survey forms were distributed and 114 were returned this is a response rate of 48% compared to a national response rate of 38% and represented 1.3% of the practice's patient list.

- 61% of patients found it easy to get through to this practice by phone compared to the CCG average of 70% and the national average of 73%.
- 80% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the CCG average of 75% and the national average of 76%.
- 84% of patients described the overall experience of this GP practice as good compared to the CCG and national average of 85%.

- 76% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the CCG and national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 37 comment cards which were all positive about the standard of care received. Patients described the staff as professional, polite and caring.

We spoke with six patients during the inspection. All six patients said they were satisfied with the care they received and thought staff were approachable, committed and caring.

Woodseats Medical Centre

Detailed findings

Our inspection team

Our inspection team was led by:

was led by a CQC Lead Inspector. The team included a GP specialist adviser, and a practice manager specialist adviser.

Background to Woodseats Medical Centre

Woodseats Medical Centre is situated in the Woodseats area of Sheffield city centre. The practice provides services for 8,700 patients under the terms of the NHS Personal Medical Services contract. The practice catchment area is classed as within the group of the third less deprived areas in England. The age profile of the practice population is similar to other GP practices in the Sheffield Clinical Commissioning Group (CCG) area.

The practice has six GP partners (three female and three male), three salaried GPs (two female and one male), three practice nurses and three healthcare assistants. They are supported by a team of practice management staff and an administration team.

The practice is open between 8am and 6.30pm Monday to Friday. Appointments with staff are available at various times throughout the day. The practice runs a GP led telephone assessment service whereby patients requesting to see a doctor are put through immediately to speak to a GP who makes an initial assessment and books whatever appointments are required. Extended hours are offered on Monday evenings until 8.15pm and on Tuesday mornings

from 7am and one Saturday each month. When the practice is closed calls were answered by the out-of-hours service which is accessed via the surgery telephone number or by calling the NHS 111 service.

Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the registered provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 18 August 2016. During our visit we:

- Spoke with a range of staff (four GPs, one practice nurse, three reception and administration staff) and spoke with patients who used the service.
- Observed interactions with patients who were being cared for.
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

Detailed findings

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people

- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people living with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients received reasonable support and truthful information. On the day of inspection we noted that all complaints were acknowledged although not all of the responses were documented and that the Parliamentary Health Service Ombudsman details were missing from the practice response letter. The practice did not have a formalised discussion of trends relating to their complaints. We were assured that these issues would be addressed.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, following a prescribing incident whereby the wrong strength of drug was given to a patient, the risk of doing this was highlighted to all clinicians and there was discussion with the local pharmacist to avoid it happening again.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always

provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs and nurses were trained to safeguarding level three.

- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that some action was being taken to address improvements identified as a result. However, we observed that some BP cuffs were not wipeable and some seats used in patient areas were ripped and stained. The suitability of furnishings and equipment should be addressed in the infection control audit and action taken as appropriate.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored and there were systems in place to monitor their use. Patient Group Directions had been adopted by the practice to allow practice nurses to administer medicines in line with legislation. Health Care Assistants were trained to administer vaccines and medicines against a patient specific prescription or direction from a prescriber.
- We reviewed three personnel files and found appropriate recruitment checks had been undertaken

Are services safe?

prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control. However, we were told that there was no risk assessment in place for legionella although regular tap flushing was taking place. (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).
- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results showed the practice had achieved 99% of the total number of points available with 10.2% exception reporting. (Exception reporting is a type of summary report that identifies any events that are outside the scope of what is considered a normal range).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2015 showed:

- Performance for diabetes related indicators was similar to the CCG and national average. For example, the percentage of patients with diabetes, on the register, who had had influenza immunisation in the preceding 12 months was 96% (CCG, 96%; national average, 94%).
- Performance for mental health related indicators was similar to the CCG and national average. For example, the percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive agreed care plan documented in the record in the preceding 12 months was 90% (CCG, 90%; national average, 88%).

There was evidence of quality improvement including clinical audit

- There had been five clinical audits completed in the last two years, all of these were completed audits where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result of an audit to measure the secondary prevention of myocardial infarction (heart attack) was improved governance around the prescribing of drugs for this group of patients and an increased awareness of the importance of monitoring and achieving target cholesterol levels.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, practice nurses who reviewed patients with long-term conditions had undertaken additional qualifications at the local University.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

Are services effective?

(for example, treatment is effective)

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.
- When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, or those at risk of developing a long-term condition. The practice had a patient focussed approach to chronic disease management with a Birthday Review System which gave patients information about their own conditions to allow them to take increased ownership and improve their understanding.
- IAPT (Improving Access to Psychological Therapies) and smoking cessation were available on the premises.

The practice's uptake for the cervical screening programme was 97%, which was above the CCG average of 89% and the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 89% to 99% and five year olds from 97% to 100%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff had courteous and helpful interactions with patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 39 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We spoke with two members of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was in line with the CCG and national averages for its satisfaction scores on consultations with GPs and nurses. For example:

- 89% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) and the national average of 89%.
- 84% of patients said the GP gave them enough time compared to the CCG and the national average of 87%.
- 94% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 96% and the national average of 95%.
- 83% of patients said the last GP they spoke to was good at treating them with care and concern compared to the CCG average of 88% and the national average of 85%.

- 87% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the CCG and the national average of 91%.
- 87% of patients said they found the receptionists at the practice helpful compared to the CCG average of 86% and the national average of 87%.

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were slightly below local and national averages. For example:

- 81% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 87% and the national average of 86%.
- 78% of patients said the last GP they saw was good at involving them in decisions about their care compared to the CCG average of 83% and the national average of 82%.
- 80% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the CCG and the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translator services were available for patients who did not have English as a first language.
- Information leaflets were available in easy read format.

Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

Are services caring?

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 22 patients as carers (0.25% of the practice list). Written information was available to direct carers to the various avenues of support available to them.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. For example the practice ran a GP led telephone assessment service (based upon the "Doctor First" system) whereby patients requesting to see a doctor were put through immediately to speak to a GP who made an initial assessment and booked whatever appointments were required. This enabled patients to have improved access to the service.

- The practice offered extended hours on Monday evenings until 8.15pm; Tuesday mornings from 7am and one Saturday each month for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that required same day consultation.
- Patients were able to receive travel vaccinations available on the NHS and those only available privately were referred to other clinics.
- There were disabled facilities, a hearing loop and interpreter services available.
- Through self funding, the practice had invested in a new purpose built Community Hub to improve health services for their local population.
- The practice had improved patient access through the implementation of a 'Dr First' system whereby patients book their appointment directly by speaking to a Doctor. This service is offered each day between 8.30 and 9.30am and ensured patients who wanted or needed to be seen were seen on the same day.
- The 'Accessible Information' initiative had been implemented as part of the patient registration process.

Access to the service

The practice opened between 8am and 6.30pm Monday to Friday. Appointments with staff were available at various times throughout the day. The practice ran a GP led

telephone assessment service whereby patients requesting to see a doctor were put through immediately to speak to a GP who made an initial assessment and booked whatever appointments were required. Extended hours were offered on Monday evenings until 8.15pm and on Tuesday mornings from 7am and one Saturday each month. When the practice was closed calls were answered by the out-of-hours service which is accessed via the surgery telephone number or by calling the NHS 111 service.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to local and national averages.

- 82% of patients were satisfied with the practice's opening hours compared to the CCG average of 75% and the national average of 78%.
- 61% of patients said they could get through easily to the practice by phone compared to the CCG average of 70% and the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- Whether a home visit was clinically necessary; and
- The urgency of the need for medical attention.

This was done by telephoning the patient or carer in advance to gather information to allow for an informed decision to be made on prioritisation according to clinical need. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

Listening and learning from concerns and complaints

The practice had a system in place for handling complaints and concerns and information about how to complain was available. When things went wrong patients received reasonable support and truthful information. We noted that all complaints were acknowledged although not all of the responses were documented. The Parliamentary Health Service Ombudsman details were missing from the response letters. On the day of inspection we were assured that these issues would be addressed.

- There was a designated responsible person who handled all complaints in the practice.

Are services responsive to people's needs?

(for example, to feedback?)

- We saw that information was available to help patients understand the complaints system for example a summary leaflet was available.

We looked at 27 complaints received in the last 12 months and found these were satisfactorily handled. Some lessons were learnt from individual concerns and complaints but

we did not see an analysis of trends to improve the quality of care. A recent complaint regarding the handling of a patient prescription had resulted in enhanced staff training and collaboration with the local chemist to avoid similar incidents occurring again.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were some arrangements for identifying, recording and managing risks, issues and implementing mitigating actions however the practice had not carried out a Legionella risk assessment.

Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included support training for all staff on communicating with

patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support and truthful information.
- The practice kept written records of most verbal and written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The PPG met regularly, carried out patient surveys and submitted proposals for improvements to the practice management team. For example, patient waiting times were routinely monitored and reported to the PPG. The PPG have also had input into the new surgery building plans.
- The practice had gathered feedback from staff generally through staff meetings, appraisals and discussion. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

Continuous improvement

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

There was a focus on continuous learning and improvement at all levels within the practice. The practice

team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area. For example, the practice was working collaboratively with other two local practices to share resources and develop services.
