Seyf Dental Practice

Inspection Report

17 Station Road
London
SW13 0LF
Tel: 020 8878 2802
Website: www.seyfdental.com

Date of inspection visit: 29 May 2019
Date of publication: 13/06/2019

Overall summary

We carried out this announced inspection on 29 May 2019 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

Seyf Dental is in Barnes, in the London borough of Richmond and provides private treatment to adults and children.

There is level access for people who use wheelchairs and those with pushchairs. Car parking spaces near the practice.

The dental team includes a dentist and a dental nurse. The practice has two treatment rooms.

The practice is owned by an individual who is the principal dentist there. They have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run.

Summary of findings

On the day of inspection, we collected 30 CQC comment cards filled in by patients.

During the inspection we spoke with the dentist and the dental nurse. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open: 11.00am to 8.00pm on Mondays; 9.00am to 5.00pm on Tuesdays; 8.00am to 5.00pm on Wednesdays and Thursdays and Friday and Saturdays by appointment.

Our key findings were:

- The practice appeared clean and well maintained.
- The provider had infection control procedures which reflected published guidance.
- Both staff members knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The practice had systems to help them manage risk to patients and staff.
- The provider had suitable safeguarding processes and both staff knew their responsibilities for safeguarding vulnerable adults and children.
- The provider had thorough staff recruitment procedures.
- The practice provided patients' care and treatment in line with current guidelines.
- The practice treated patients with dignity and respect and took care to protect their privacy and personal information.
- The practice was providing preventive care and supporting patients to ensure better oral health.
- The appointment system took account of patients' needs.
- The provider had effective leadership and culture of continuous improvement.
- Both staff supported each other and worked well as a team.
- The provider asked the dental nurse and patients for feedback about the services they provided.
- The provider dealt with complaints positively and efficiently.
- The provider had suitable information governance arrangements.

Summary of findings

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.

Both staff had undertaken training in safeguarding people and knew how to recognise the signs of abuse and how to report concerns.

Both staff were qualified for their roles and the practice completed essential recruitment checks.

Premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had suitable arrangements for dealing with medical and other emergencies.

No action

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentist assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the staff as professional, lovely and both staff being very knowledgeable. The dentist discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The provider supported the dental nurse to complete training relevant to their roles and had systems to help them monitor this.

No action

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from 30 people. Patients were positive about all aspects of the service the practice provided. They told us staff were caring, very warm and exceptional.

They said that they were given helpful, honest explanations about dental treatment, and said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

No action

Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

No action

Summary of findings

The practice's appointment system took account of patients' needs. Patients could get an appointment quickly if in pain.

The practice considered patients' different needs. This included providing facilities for patients with a disability and families with children. The practice had access to telephone interpreter services and had arrangements to help patients with sight or hearing loss.

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and both staff supported each other and worked well as a team.

The practice team kept complete patient dental care records which were, clearly written or typed and stored securely.

The provider monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

No action

Are services safe?

Our findings

Safety systems and processes, including Both staff recruitment, equipment and premises and radiography (X-rays)

The practice had clear systems to keep patients safe.

Both staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that both staff members had undertaken training in safeguarding children and vulnerable adults.

Both staff knew about the signs and symptoms of abuse and neglect and how to report concerns, including notification to the CQC.

The practice had a whistleblowing policy. The dental nurse felt confident they could raise concerns without fear of reprimand.

The dentist used dental dams in line with guidance from the British Endodontic Society when providing root canal treatment. In instances where the rubber dam was not used, such as for example refusal by the patient, and where other methods were used to protect the airway, this was documented in the dental care record and a risk assessment completed.

The provider had a business continuity plan describing how they would deal with events that could disrupt the normal running of the practice.

The practice had a recruitment policy and procedure to help them employ suitable staff and had checks in place for agency and locum staff. These reflected the relevant legislation. We looked at both staffs' recruitment records. These showed the practice followed their recruitment procedure.

We noted that both staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

The practice ensured that facilities and equipment were safe and that equipment was maintained according to manufacturers' instructions, including electrical and gas appliances.

Records showed that fire detection equipment, such as smoke detectors and emergency lighting, were regularly tested and firefighting equipment, such as fire extinguishers, were regularly serviced.

The practice had suitable arrangements to ensure the safety of the X-ray equipment and had the required information in their radiation protection file.

We saw evidence that the dentist justified, graded and reported on the radiographs they took. The practice carried out radiography audits every year following current guidance and legislation.

Both staff had completed continuing professional development (CPD) in respect of dental radiography.

Risks to patients

There were systems to assess, monitor and manage risks to patient safety.

The practice's health and safety policies, procedures and risk assessments were reviewed regularly to help manage potential risk. The practice had current employer's liability insurance.

We looked at the practice's arrangements for safe dental care and treatment. Both staff followed relevant safety regulation when using needles and other sharp dental items. A sharps risk assessment had been undertaken and was updated annually.

The provider had a system in place to ensure both staff had received appropriate vaccinations, including the vaccination to protect them against the Hepatitis B virus, and that the effectiveness of the vaccination was checked.

Both staff knew how to respond to a medical emergency and completed training in emergency resuscitation and basic life support (BLS) every year.

Emergency equipment and medicines were available as described in recognised guidance. The practice kept records of their checks of these to make sure these were available, within their expiry date, and in working order.

A dental nurse worked with the dentist when they treated patients in line with GDC Standards for the Dental Team.

The provider had suitable risk assessments to minimise the risk that can be caused from substances that are hazardous to health.

Are services safe?

The practice occasionally used locum and agency staff. We noted that these staff received an induction to ensure that they were familiar with the practice's procedures.

The practice had an infection prevention and control policy and procedures. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM 01-05) published by the Department of Health and Social Care. Both staff completed infection prevention and control training and received updates as required.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM 01-05. The records showed equipment used by staff for cleaning and sterilising instruments was validated, maintained and used in line with the manufacturers' guidance.

The practice had systems in place to ensure that any work was disinfected prior to being sent to a dental laboratory and before treatment was completed.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment. All recommendations had been actioned and records of water testing and dental unit water line management were in place.

We saw cleaning schedules for the premises. The practice was visibly clean when we inspected.

The provider had policies and procedures in place to ensure clinical waste was segregated and stored appropriately in line with guidance.

The practice carried out infection prevention and control audits twice a year. The latest audit showed the practice was meeting the required standards.

Information to deliver safe care and treatment

Both staff had the information they needed to deliver safe care and treatment to patients.

We discussed with the dentist how information to deliver safe care and treatment was handled and recorded. We looked at a sample of dental care records to confirm our findings and noted that individual records were written and

managed in a way that kept patients safe. Dental care records we saw were complete, legible, were kept securely and complied with General Data Protection Regulation (GDPR) requirements.

Patient referrals to other service providers contained specific information which allowed appropriate and timely referrals in line with practice protocols and current guidance.

Safe and appropriate use of medicines

The provider had reliable systems for appropriate and safe handling of medicines.

There was a suitable stock control system of medicines which were held on site. This ensured that medicines did not pass their expiry date and enough medicines were available if required.

The dentist were aware of current guidance with regards to prescribing medicines.

Antimicrobial prescribing audits were carried out periodically. The most recent audit demonstrated the dentist was following current guidelines.

Track record on safety and Lessons learned and improvements

There were comprehensive risk assessments in relation to safety issues. The practice monitored and reviewed incidents. This helped it to understand risks and gave a clear, accurate and current picture that led to safety improvements.

In the previous 12 months there had been no safety incidents. There were systems for investigating, documenting and discussing incidents with the rest of the dental practice team to prevent such occurrences happening again in the future.

There were adequate systems for reviewing and investigating when things went wrong. The practice learned and shared lessons identified themes and acted to improve safety in the practice.

There was a system for receiving and acting on safety alerts. The practice learned from external safety events as well as patient and medicine safety alerts. We saw they were shared with the team and acted upon if required.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment, care and treatment

The practice had systems to keep both staff up to date with current evidence-based practice. We saw that the dentist assessed patients' needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

The practice had access to intra-oral and single lens reflex (SLR) cameras to enhance the delivery of care.

Helping patients to live healthier lives

The practice was providing preventive care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentist prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children and adults based on an assessment of the risk of tooth decay.

The dentist where applicable, discussed smoking, alcohol consumption and diet with patients during appointments.

The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

Consent to care and treatment

The practice obtained consent to care and treatment in line with legislation and guidance.

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentist gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Improvements were required with regards to recording consent in patients dental care records.

The practice had consent and Mental Capacity Act policies. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to Gillick competence, by which a child under the age of 16 years of age may give consent for themselves. The staff were aware of the need to consider this when treating young people under 16 years of age.

Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

Monitoring care and treatment

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentist assessed patients' treatment needs in line with recognised guidance.

We saw the practice audited patients' dental care records to check that the dentist recorded the necessary information.

Effective staffing

Staff new to the practice had a period of induction based on a structured programme. We confirmed clinical staff completed the continuing professional development required for their registration with the General Dental Council.

Staff discussed their training needs at annual appraisals and during clinical supervision. We saw evidence of completed appraisals and how the practice addressed the training requirements of staff.

Co-ordinating care and treatment

Both staff worked well together and with other health and social care professionals to deliver effective care and treatment.

The dentist confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide.

The practice had systems to identify, manage, follow up and where required refer patients for specialist care when presenting with dental infections.

The practice also had systems for referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist.

The practice monitored all referrals to make sure they were dealt with promptly.

Are services caring?

Our findings

Kindness, respect and compassion

Staff treated patients with kindness, respect and compassion.

Both staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were caring, empathetic and showed concern. We saw that staff treated patients respectfully and kindly and were friendly towards patients at the reception desk and over the telephone.

Privacy and dignity

The practice respected and promoted patients' privacy and dignity.

Both staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided privacy when staff were talking to patients at the reception. If a patient asked for more privacy, staff would take them into another room. The reception computer screens were not visible to patients, and staff did not leave patients' personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

Involving people in decisions about care and treatment

Staff helped patients to be involved in decisions about their care and were aware of the requirements under the Equality Act.

- Interpretation services were available for patients who did not use English as a first language. Patients were also told about multi-lingual staff that might be able to support them. This included Swedish, Turkish, Polish, Farsi and Italian.
- Staff communicated with patients in a way that they could understand and communication aids and easy read materials were available.

The practice had an information pack which gave patients clear information to help them make informed choices about their treatment. The dentist described the conversations they had with patients to satisfy themselves they understood their treatment options.

The practice's website and information leaflet provided patients with information about the range of treatments available at the practice.

The dentist described to us the methods they used to help patients understand treatment options discussed. These included for example models, videos, X-ray images and an intra-oral camera. The intra-oral cameras and SLR camera enabled photographs to be taken of the tooth being examined or treated and shown to the patient/relative to help them better understand the diagnosis and treatment.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

Staff were clear on the importance of emotional support needed by patients when delivering care. We received feedback from patients which confirmed that staff provided emotional support to them and their children. Patients who were nervous or had nervous children told us that they felt supported and the dentist calmed them down.

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice had made reasonable adjustments for patients with disabilities. These included steps free access, a hearing loop, a magnifying glass and accessible toilet with hand rails and a call bell.

A disability access audit had been completed and an action plan formulated to continually improve access for patients.

Timely access to services

Patients could access care and treatment from the practice within an acceptable timescale for their needs.

The practice displayed its opening hours in the premises, and included it in their information leaflet and on their website.

The practice had an appointment system to respond to patients' needs. Patients who requested an urgent appointment were seen the same day. Patients had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

The practice's website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. The dentist was also available to patients outside of opening times, via telephone. Patients confirmed they could make routine and emergency appointments easily and were not kept waiting for their appointment.

Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

The practice had a policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint. The principal dentist was responsible for dealing with these. The dental nurse would tell the principal dentist about any formal or informal comments or concerns straight away so patients received a quick response.

They aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

The practice had not received any complaints in the past 12 months. We looked at comments, compliments and complaints from before this period and these showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

Are services well-led?

Our findings

Leadership capacity and capability

We found the principal dentist had the capacity and skills to deliver high-quality, sustainable care. They demonstrated they had the experience, capacity and skills to deliver the practice strategy and address risks to it.

They were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.

Vision and strategy

There was a clear vision and set of values.

The strategy was in line with health and social priorities across the region. The practice planned its services to meet the needs of the practice population.

Culture

The practice had a culture of high-quality sustainable care.

The team was small but they confirmed that they felt respected, supported and valued. They were proud to work in the practice.

The practice focused on the needs of patients.

Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the Duty of Candour.

Governance and management

There were clear responsibilities, roles and systems of accountability to support good governance and management.

The principal dentist had overall responsibility for the management and clinical leadership of the practice and was also responsible for the day to day running of the service. Both staff demonstrated good awareness of their roles and responsibilities.

The provider had a system of clinical governance in place which included policies, protocols and procedures that were easily accessible and were reviewed on a regular basis.

There were clear and effective processes for managing risks, issues and performance.

Appropriate and accurate information

The practice acted on appropriate and accurate information.

The practice had information governance arrangements and both staff were aware of the importance of these in protecting patients' personal information.

Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

The practice used patient surveys, written comments and verbal comments to obtain patients' views about the service.

The practice gathered feedback from staff through meetings, surveys, and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on. We saw copies of staff satisfaction surveys, feedback and notes from meetings.

Continuous improvement and innovation

There were systems and processes for learning, continuous improvement and innovation.

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records, radiographs and infection prevention and control. They had clear records of the results of these audits and the resulting action plans and improvements.

The principal dentist showed a commitment to learning and improvement and valued the contributions made to the team.

The dental nurse had an annual appraisal. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the nurse's folder.
