Website: www.rainbowpractice.nhs.uk

Date of inspection visit: 18 May 2016
Date of publication: 17/01/2017

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Dr Tuljaram Patalay on 18 May 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.

- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

The areas where the provider should make improvement are:

- To review the scheduling of clinical meetings to allow maximum attendance from all relevant staff members, ensure all clinicians receive detailed minutes of discussions and any agreed actions
- To review the audit systems to monitor the serial number of prescription pads.
- To review and improve outcomes for patients with dementia.

Summary of findings

Professor Steve Field CBE FRCP FFPH FRCGP

Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

Good

- There was an effective system in place for reporting and recording significant events.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Are services effective?

The practice is rated as good for providing effective services.

Good

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were at or above average compared to the national average, apart from care planning of dementia patients which was 10% below the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Are services caring?

The practice is rated as good for providing caring services.

Good

- Data from the national GP patient survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.

Summary of findings

- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken
- The practice sought feedback from staff and patients, which it acted on. The patient participation group was active.

Good

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

Good

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- The practice carried out NHS health checks for patients aged 40–74.

People with long term conditions

Good

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- The percentage of patients on the diabetes register, with a record of a foot examination and risk classification within the preceding 12 months was 91% compared to the CCG average of 86% and the national average of 88%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Families, children and young people

Good

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who

Summary of findings

were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.

- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The percentage of women aged 25-64 whose notes record that a cervical screening

test has been performed in the preceding 5 years was 82% compared to the CCG average of 81% and the national average of 82%.

- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

Working age people (including those recently retired and students)

Good

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- The practice offered extended hours appointments to meet the needs of working age people.

People whose circumstances may make them vulnerable

Good

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.

Summary of findings

- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

Good

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses whose alcohol consumption has been recorded in the preceding 12 months was 97% compared to the CCG and national average of 90%.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

Summary of findings

What people who use the service say

The national GP patient survey results were published in January 2016. The results showed the practice was performing in line with local and national averages. A total of 326 survey forms were distributed and 111 were returned. This represented 2.5% of the practice's patient list.

- 87% of patients found it easy to get through to this practice by phone compared to the CCG average of 68% and the national average of 73%.
- 79% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the CCG average of 69% and the national average of 76%.
- 91% of patients described the overall experience of this GP practice as good compared to the CCG average of 81% and the national average of 85%.

- 91% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the CCG average of 74% and the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 39 comment cards which were all positive about the standard of care received. Nine of the comment cards did have negative reviews about the wait time for booking routine appointments, this related to waiting to see a specific GP. We checked availability of routine appointments on the day of our inspection and found that there were GP and nurse appointments available the following day.

We spoke with one patient during the inspection. The patient said they were satisfied with the care they received and thought staff were approachable, committed and caring.

Areas for improvement

Action the service **SHOULD** take to improve

- To review the scheduling of clinical meetings to allow maximum attendance from all relevant staff members, ensure all clinicians receive detailed minutes of discussions and any agreed actions
- To review the audit systems to monitor the serial number of prescription pads.
- To review and improve outcomes for patients with dementia.

Dr Tuljaram Patalay

Detailed findings

Our inspection team

Our inspection team was led by:

ACQC Inspector and included a GP specialist adviser.

Background to Dr Tuljaram Patalay

The Dr Tuljaram Patalay practice is located in Evergreen Primary Care Centre in Enfield, North London within the NHS Enfield Clinical Commissioning Group. The practice holds a Primary Medical Services contract (an agreement between NHS England and general practices for delivering personal medical services). The practice provides a full range of enhanced services including alcohol support, childhood immunisation and vaccination, extended hours, dementia support, online access, influenza and pneumococcal immunisations, learning disabilities, minor surgery, rotavirus and shingles immunisation and unplanned admissions.

The practice is registered with the Care Quality Commission to carry on the regulated activities of diagnostic and screening procedures, maternity and midwifery services, surgical procedures, family planning, and treatment of disease, disorder or injury.

The practice had a patient list size of approximately 4,500 at the time of our inspection.

The staff team at the practice included one principle GP (male), one salaried GP (female), three GP locums (one male, two female), one practice manager and two locum practice nurses (females). The practice had six administrative staff. There were 16 GP sessions and 10 nurse sessions available per week.

The practices opening hours are:

- Monday to Friday 8:00am to 6:30pm

Appointments are available at the following times:

- Monday to Thursday 9:00am to 12:00pm and 4:00pm to 6:30pm (3:30pm to 6:30pm on Thursday)
- Extended hours are offered Monday evening from 6:30pm to 7:30pm

Outside of these times cover is provided the local out of hours service which can be contacted via the NHS 111 service.

To assist patients in accessing the service there is an online booking system, and a text message reminder service for scheduled appointments. Urgent appointments are available daily and GPs also complete telephone consultations for patients.

Why we carried out this inspection

We inspected this service as part of our new comprehensive inspection programme. This was the first inspection carried out at this practice.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

Detailed findings

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 18 May 2016. During our visit we:

- Spoke with a range of clinical and non-clinical staff and spoke with patients who used the service.
- Observed how patients were being cared for and talked with carers and/or family members
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?

- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, a hospital letter advising the practice of a medication change was misplaced. The practice obtained a copy of the letter and adjusted the medication. The incident was discussed at a team meeting and the procedure for managing hospital letters was reinforced. All letters to be scanned into the system and approved by GPs via the electronic clinical system. The practice set a date to audit the system following the incident.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead

member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained to child safeguarding level 3. Nurses were trained to child safeguarding level 2 and administration staff were trained to child safeguarding level 1.

- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The principal GP was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored although we did not see evidence that there were systems in place to monitor their use. Patient Group Directions (PGDs) had been adopted by the practice to allow nurses to administer medicines in line with legislation. (PGDs are written instructions from a qualified and registered prescriber for a medicine including the dose, route and frequency or appliance to be supplied or administered to a named patient after

Are services safe?

the prescriber had assessed the patient on an individual basis). The health care assistant was trained to administer vaccines and medicines against direction from a prescriber.

- We reviewed five personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records. For example, audits on beta-blockers and non-alcoholic fatty liver disease.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 96.7% of the total number of points available (exception reporting rate 4%).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/15 showed:

- Performance for diabetes related indicators was above the national average. For example, The percentage of patients with diabetes, on the register, in whom the last blood pressure reading (measured in the preceding 12 months) is 140/80 mmHg or less was 84% (exception rate reporting 7%) compare to the CCG average of 76% and the national average of 78%.
- Performance for mental health related indicators was above the national average. For example, The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive, agreed care plan documented in the record, in the preceding 12 months was 92% (exception rate reporting 0%) compared to the CCG average of and national average of 88%.
- Performance for hypertension related indicators was similar to the national average. For example, patients

with hypertension in whom the last blood pressure reading (measured in the preceding 12 months) is 150/90 mmHg or less was 86% compared to a CCG average of 81% and a national average of 84%

- Performance for dementia related indicators was below the national average. For example, The percentage of patients diagnosed with dementia whose care has been reviewed in a face-to-face review in the preceding 12 months 74% compared to the CCG average of and national average of 84%.

There was evidence of quality improvement including clinical audit.

- There had been four clinical audits completed in the last two years, two of these were completed audits where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review.
- Findings were used by the practice to improve services. For example, recent action taken as a result included an audit carried out in January 2016 to review patients with non-alcoholic fatty liver disease (the medical term for a range of conditions caused by a build-up of fat in the liver). A total of five patients were identified and the records were reviewed to ensure that appropriate clinical investigations took place for this condition such as an ultrasound scan of the liver. All five patients had an ultrasound scan. It was identified that only two of the five patients were referred for an enhanced liver fibrosis (ELF) test (a minimally invasive blood test for measuring liver damage known as fibrosis) in accordance with NICE guidance. All three remaining patients were referred for the ELF test as a result of the audit. The re-audit took place in March 2016 and identified that five out five patients with non-alcoholic fatty liver disease had received the ELF test.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.

Are services effective?

(for example, treatment is effective)

- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, vaccine administration technique training for the health care assistant.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, and smoking and alcohol cessation. Patients were signposted to the relevant service.

The practice's uptake for the cervical screening programme was 82%, which was comparable to the CCG average of 81% and the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Childhood immunisation rates for the vaccines given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccines given to under two year olds ranged from 16% to 94% and five year olds from 63% to 94%.

Are services effective?

(for example, treatment is effective)

Patients had access to appropriate health assessments and checks. These included health checks for new patients and

NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 39 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect. Nine of the comment cards mentioned long wait times for routine appointments. On the day of our inspection we reviewed the appointment system and found that there were pre-bookable routine appointments with GPs and nurses within two working days.

We spoke with one member of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was above average for its satisfaction scores on consultations with GPs and nurses. For example:

- 91% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 85% and the national average of 89%.
- 90% of patients said the GP gave them enough time compared to the CCG average of 82% and the national average of 87%.

- 97% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 94% and the national average of 95%.
- 85% of patients said the last GP they spoke to was good at treating them with care and concern compared to the CCG average of 80% and the national average of 85%.
- 90% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the CCG average of 85% and the national average of 91%.
- 91% of patients said they found the receptionists at the practice helpful compared to the CCG average of 85% and the national average of 87%.

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 91% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 90% and the national average of 86%.
- 84% of patients said the last GP they saw was good at involving them in decisions about their care compared to the CCG average of 76% and the national average of 82%.
- 86% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the CCG average of 80% national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translation services were available for patients who did not have English as a first language.

Are services caring?

- Information leaflets were available in easy read format.
- There were cancer service leaflets available in different languages.
- Non-English speaking patients were given double appointments.

Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 55 patients as carers (more than 1% of the practice list). Written information was available to direct carers to the various avenues of support available to them. Carers were given double appointments and same day appointments.

Staff told us that if families had suffered bereavement, the practice sent them a sympathy card. This was followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified.

- The practice offered a 'Commuter's Clinic' on a Monday evening until 7:30pm for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccines available on the NHS and were referred to other clinics for vaccines only available privately.
- There were disabled facilities, a hearing loop and translation services available.

Access to the service

The practice was open between 8:00am and 6:30pm Monday to Friday. Appointments were from 9:00am to 12:00pm every morning and 4:00pm to 6:30pm daily (3:30pm to 6:30pm on Thursday). Extended hours appointments were offered at the following times on Monday evenings. In addition to pre-bookable appointments that could be booked up to four weeks in advance, urgent appointments were also available for people that needed them.

Results from the national GP patient survey showed that patients' satisfaction with how they could access care and treatment was comparable to local and national averages.

- 81% of patients were satisfied with the practice's opening hours compared to the CCG average of 77% and the national average of 78%.
- 87% of patients said they could get through easily to the practice by phone compared to the CCG average of 68% and the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system such as the complaints pack held by receptionists and referred to in the practice leaflet.

We looked at three complaints received in the last 12 months and found that the practice handled these complaints in line with their policy. Lessons were learnt from individual concerns and complaints and also from analysis of trends and action was taken as a result to improve the quality of care. For example, we saw evidence of a complaint regarding a miscommunication during a patient consultation with a non-English speaking patient about the symptoms the patient was experiencing. The practice logged the complaint as a significant event and handled the complaint in accordance with their complaints policy. As a result non-English speaking patients are all made aware when attending the practice and phoning for an appointment that interpreter services are available. Additionally information about the practice, the services it offers and the rights of patients, are available in 20 languages on the practice website.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement and staff knew and understood the values.
- The practice had a strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

Leadership and culture

On the day of inspection the principal GP in the practice demonstrated the experience, capacity and capability to run the practice and ensure high quality care. The principal GP told us they prioritised safe, high quality and compassionate care. Staff told us the principal GP was approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included support training for all staff on communicating with

patients about notifiable safety incidents. The principal GP encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- However, not all staff took part in clinical meetings nor were they involved in the discussions.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The PPG met regularly, carried out patient surveys and submitted proposals for improvements to the practice management team.
- The practice had gathered feedback from staff through staff meetings, appraisals and informal discussions. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.
