

Dr E Ahmed's Practice

Inspection report

New Darwen Health Centre
James Street West
Darwen
Lancashire
BB3 1PY
Tel: 01254226600
www.darwenhealthlink.nhs.uk

Date of inspection visit: 05/04/2018
Date of publication: 24/05/2018

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Ratings

Overall rating for this location

Good 

Are services safe?	Good 
Are services effective?	Good 
Are services caring?	Good 
Are services responsive?	Good 
Are services well-led?	Good 

Overall summary

This practice is rated as good overall. (Previous inspection August 2016 – Good with requires improvement in safe domain. Desk top review January 2017 rated good for safe)

The key questions are rated as:

Are services safe? – Good

Are services effective? – Good

Are services caring? – Good

Are services responsive? – Good

Are services well-led? - Good

We carried out an announced comprehensive inspection at Dr E Ahmed's practice (also known as Darwen Healthlink) on 5 April 2018 as part of our inspection programme.

- At this inspection we found the practice routinely reviewed the effectiveness and appropriateness of the care it provided. It ensured that care and treatment was delivered according to evidence- based guidelines.
- Staff involved and treated patients with compassion, kindness, dignity and respect.

- Patients found the appointment system easy to use and reported that they were able to access care when they needed it.
- There was a strong focus on continuous learning and improvement at all levels of the organisation.
- When incidents did happen, the practice investigated them and discussed them in a staff meeting. However outcomes of these discussions and lessons learnt were not clearly recorded.

The areas where the provider **should** make improvements are:

- Outcomes of investigations and lessons learnt should be clearly recorded and actions reviewed.
- The practice should carry out a pro-active health and safety risk assessment.
- Seek assurance from the building managers in respect of fire safety procedures and alarm testing
- Take action to improve prescribing rates for hypnotics.
- Records of staff training should be kept up to date.
- The practice should consider establishing a planned programme of audits.

Professor Steve Field CBE FRCP FFPH FRCGP Chief Inspector of General Practice

Population group ratings

Older people	Good 
People with long-term conditions	Good 
Families, children and young people	Good 
Working age people (including those recently retired and students)	Good 
People whose circumstances may make them vulnerable	Good 
People experiencing poor mental health (including people with dementia)	Good 

Our inspection team

Our inspection team was led by a CQC lead inspector. The team included a GP specialist adviser, and a second CQC inspector.

Background to Dr E Ahmed's Practice

Dr E Ahmed's practice (also known as Darwen Healthlink) is housed on the first floor of Darwen Health Centre, James Street West, Darwen along with one other GP practices and a range of other community healthcare services. The practice website is .

The practice delivers primary medical services to a patient population of approximately 16,600 patients under a General Medical Services (GMS) contract with NHS England. It is part of the NHS Blackburn with Darwen Clinical Commissioning Group (CCG).

The practice delivers the following regulated activities:-

- Diagnostic and screening procedures
- Family planning services
- Maternity and midwifery services
- Surgical procedures
- Treatment of disease, disorder or injury

The practice's patient population has a slightly higher proportion of older people than the local averages, for example 18% are over the age of 65 (CCG average being 13.5% and national average 17%), 21% are under the age of 18 (CCG average 25%, national average 21%)

Information published by Public Health England rates the

level of deprivation within the practice population group as three on a scale of one to ten. Level one represents the highest levels of deprivation and level ten the lowest. The practice population is 4% Asian.

The practice is staffed by six GP partners (five male, one female) .The provider was in the process of updating its registration with CQC to reflect the addition of the female GP partner.

Other clinical staff consist of two Advanced Nurse Practitioners, two Nurse Practitioners, five practice nurses, and two health care assistants. Clinical staff are supported by two practice managers and a team of reception and administration staff.

The practice is open between 8am and 6.30pm Monday to Friday, with surgeries offered between 9am and 11.30 each morning and 4pm until 6.30pm each afternoon. Extended hours appointments are available on Monday and Wednesday evenings until 8pm. Outside normal surgery hours, patients are advised to contact the out of hour's service by dialling 111, offered locally by the provider East Lancashire Medical Services.

Are services safe?

We rated the practice as good for providing safe services.

Safety systems and processes

The practice had clear systems to keep people safe and safeguarded from abuse.

- The practice had appropriate systems to safeguard children and vulnerable adults from abuse. All staff received up-to-date safeguarding and safety training appropriate to their role. They knew how to identify and report concerns. Reports and learning from safeguarding incidents were available to staff. Staff who acted as chaperones were trained for their role and had received a DBS check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable.)
- Staff took steps, including working with other agencies, to protect patients from abuse, neglect, harassment, discrimination and breaches of their dignity and respect.
- The practice carried out appropriate staff checks at the time of recruitment and on an ongoing basis.
- There was an effective system to manage infection prevention and control.
- The practice had arrangements to ensure that facilities and equipment were safe and in good working order.
- Arrangements for managing waste and clinical specimens kept people safe.

Risks to patients

There were adequate systems to assess, monitor and manage risks to patient safety.

- Arrangements were in place for planning and monitoring the number and mix of staff needed to meet patients' needs, including planning for holidays, sickness, busy periods and epidemics.
- There was an effective induction system for temporary staff tailored to their role.
- The practice was equipped to deal with medical emergencies and staff were suitably trained in emergency procedures.

- Staff understood their responsibilities to manage emergencies on the premises and to recognise those in need of urgent medical attention. Clinicians knew how to identify and manage patients with severe infections including sepsis.
- When there were changes to services or staff the practice assessed and monitored the impact on safety.

Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment to patients.

- The care records we saw showed that information needed to deliver safe care and treatment was available to staff. There was a documented approach to managing test results.
- The practice had systems for sharing information with staff and other agencies to enable them to deliver safe care and treatment.
- Clinicians made timely referrals in line with protocols.

Appropriate and safe use of medicines

The practice had reliable systems for appropriate and safe handling of medicines.

- The systems for managing and storing medicines, including vaccines, medical gases, emergency medicines and equipment, minimised risks.
- Staff prescribed, administered or supplied medicines to patients and gave advice on medicines in line with current national guidance. We saw no evidence the practice had reviewed its antibiotic prescribing however prescribing levels were comparable with other practices which indicated good antimicrobial stewardship in line with local and national guidance.
- There were effective protocols for verifying the identity of patients during remote or online consultations.
- Patients' health was monitored in relation to the use of medicines and followed up on appropriately. Patients were involved in regular reviews of their medicines.

Track record on safety

The practice had a good track record on safety.

- However there was no documented evidence of environmental checks for example fire drills, alarm tests and legionella on site on the day of inspection. These documents were kept by the building's management company and were not available for us to access. The

Are services safe?

practice informed us following the inspection that they were still awaiting these. We saw that the practice had done reactive risk assessments following the emergence of any safety issues. However a pro-active assessment to anticipate possible risks had not been carried out.

Lessons learned and improvements made

The practice learned and made improvements when things went wrong.

- Staff understood their duty to raise concerns and report incidents and near misses. Leaders and managers supported them when they did so.
- There were adequate systems for reviewing and investigating when things went wrong. However outcomes of investigations and lessons learnt were not recorded clearly.
- The practice acted on and learned from external safety events as well as patient and medicine safety alerts.

Please refer to the Evidence Tables for further information.

Are services effective?

We rated the practice and all of the population groups as good for providing effective services overall.

(Please note: Any Quality Outcomes (QOF) data relates to 2016/17. QOF is a system intended to improve the quality of general practice and reward good practice.)

Effective needs assessment, care and treatment

The practice had systems to keep clinicians up to date with current evidence-based practice. We saw that clinicians assessed needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

- Patients' immediate and ongoing needs were fully assessed. This included their clinical needs and their mental and physical wellbeing.
- We saw no evidence of discrimination when making care and treatment decisions.
- Staff used appropriate tools to assess the level of pain in patients.
- Staff advised patients what to do if their condition got worse and where to seek further help and support.

Older people:

- Older patients who were frail or may be vulnerable received a full assessment of their physical, mental and social needs. The practice had identified patients aged 65 and over who were potentially living with moderate or severe frailty. Those identified as being frail had not yet had a clinical review and this was planned for 2018/19.
- Patients aged over 75 were invited for a health check. If necessary they were referred to other services such as voluntary services and supported by an appropriate care plan. Over a 12 month period the practice had offered 125 patients a health check (this was 10% of those registered). 71 of these checks had been carried out at patients' homes.
- The practice followed up on older patients discharged from hospital. It ensured that their care plans and prescriptions were updated to reflect any extra or changed needs.
- Staff had appropriate knowledge of treating older people including their psychological, mental and communication needs.

People with long-term conditions:

- Patients with long-term conditions had a structured annual review to check their health and medicines needs were being met. For patients with the most complex needs, the GP worked with other health and care professionals to deliver a coordinated package of care.
- Staff who were responsible for reviews of patients with long term conditions had received specific training.
- GPs followed up patients who had received treatment in hospital or through out of hours services for an acute exacerbation of asthma.
- The practice had arrangements for adults with newly diagnosed cardiovascular disease including the offer of high-intensity statins for secondary prevention, people with suspected hypertension were offered ambulatory blood pressure monitoring and patients with atrial fibrillation were assessed for stroke risk and treated as appropriate.
- The practice was able to demonstrate how they identified patients with commonly undiagnosed conditions, for example diabetes, chronic obstructive pulmonary disease (COPD), atrial fibrillation and hypertension.
- The practice had appointed an administrator to work collaboratively with the nursing team to continue to improve quality of care with patients experiencing long term conditions.

Families, children and young people:

- Childhood immunisations were carried out in line with the national childhood vaccination programme. Uptake rates shown in the Evidence Table for the vaccines given were below the target percentage of 90% for the year 2016/17. However the practice was able to provide unvalidated data for 2017/18 which showed uptake rates were all above the 90% target.
- The practice had arrangements to identify and review the treatment of newly pregnant women on long-term medicines. These patients were provided with advice and post-natal support in accordance with best practice guidance.
- The practice had arrangements for following up failed attendance of children's appointments following an appointment in secondary care or for immunisation.

Working age people (including those recently retired and students):

Are services effective?

- The practice's uptake for cervical screening was in line with local and national averages.
- The practices' uptake for breast and bowel cancer screening was in line the national average.
- The practice had systems to inform eligible patients to have the meningitis vaccine, for example before attending university for the first time.
- Patients had access to appropriate health assessments and checks including NHS checks for patients aged 40-74. There was appropriate follow-up on the outcome of health assessments and checks where abnormalities or risk factors were identified.

People whose circumstances make them vulnerable:

- End of life care was delivered in a coordinated way which took into account the needs of those whose circumstances may make them vulnerable.
- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice had a system for vaccinating patients with an underlying medical condition according to the recommended schedule.

People experiencing poor mental health (including people with dementia):

- The practice assessed and monitored the physical health of people with mental illness, severe mental illness, and personality disorder by providing access to health checks, interventions for physical activity, obesity, diabetes, heart disease, cancer and access to 'stop smoking' services. There was a system for following up patients who failed to attend for administration of long term medication.
- When patients were assessed to be at risk of suicide or self-harm the practice had arrangements in place to help them to remain safe including following up all attendances at the Accident and Emergency department.
- The practice specifically considered the physical health needs of patients with poor mental health and those living with dementia.
- Patients at risk of dementia were identified and offered an assessment to detect possible signs of dementia. When dementia was suspected there was an appropriate referral for diagnosis.
- The practice offered annual health checks to patients with a learning disability.

Monitoring care and treatment

The practice had a programme of quality improvement activity and reviewed the effectiveness and appropriateness of the care provided. For example audits had been completed of prescription of medicines to pregnant women, of the link between Tamoxifen (used in treatment of breast cancer) and certain anti-depressants and of the codings used by the administrative team to ensure patients were correctly identified for treatment. However the practice did not evidence a planned programme of audits. An engagement event with patients had identified a measureable quality improvement programme which had been scheduled and responsibilities allocated. Where appropriate, clinicians took part in local and national improvement initiatives such as cost effective prescribing and early intervention for gestational diabetes.

Effective staffing

Staff had the skills, knowledge and experience to carry out their roles.

- Staff had appropriate knowledge for their role, for example, to carry out reviews for people with long term conditions, older people and people requiring contraceptive reviews.
- Staff whose role included immunisation and taking samples for the cervical screening programme had received specific training and could demonstrate how they stayed up to date.
- The practice understood the learning needs of staff and provided protected time and training to meet them. However, up to date records of skills and qualifications were not consistently maintained, for example records of training were not up to date on the day of the inspection. Staff were encouraged and given opportunities to develop.
- The practice provided staff with ongoing support. This included an induction process, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and support for revalidation. The induction process for healthcare assistants included the requirements of the Care Certificate. The practice ensured the competence of staff employed in advanced roles by audit of their clinical decision making, including non-medical prescribing.
- There was a clear approach for supporting and managing staff when their performance was poor or variable.

Are services effective?

Coordinating care and treatment

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

- We saw records that showed that all appropriate staff, including those in different teams and organisations, were involved in assessing, planning and delivering care and treatment.
- The practice shared clear and accurate information with relevant professionals when deciding care delivery for people with long term conditions and when coordinating healthcare for care home residents. It shared information with, and liaised, with community services, social services and carers for housebound patients and with health visitors and community services for children who have relocated into the local area.
- Patients received coordinated and person-centred care. This included when they moved between services, when they were referred, or after they were discharged from hospital. The practice worked with patients to develop personal care plans that were shared with relevant agencies.
- The practice ensured that end of life care was delivered in a coordinated way which took into account the needs of different patients, including those who may be vulnerable because of their circumstances.

Helping patients to live healthier lives

Staff were consistent and proactive in helping patients to live healthier lives.

- The practice identified patients who may be in need of extra support and directed them to relevant services. This included patients in the last 12 months of their lives, patients at risk of developing a long-term condition and carers.
- Staff encouraged and supported patients to be involved in monitoring and managing their own health, for example through social prescribing schemes such as a local one stop shop which assesses social needs.
- Staff discussed changes to care or treatment with patients and their carers as necessary.
- The practice supported national priorities and initiatives to improve the population's health, for example, stop smoking campaigns, tackling obesity.

Consent to care and treatment

The practice obtained consent to care and treatment in line with legislation and guidance.

- Clinicians understood the requirements of legislation and guidance when considering consent and decision making.
- Clinicians supported patients to make decisions. Where appropriate, they assessed and recorded a patient's mental capacity to make a decision.
- The practice monitored the process for seeking consent appropriately.

Please refer to the Evidence Tables for further

information. Patients at risk of dementia were identified and offered an assessment to detect possible signs of dementia. When dementia was suspected there was an appropriate

Are services caring?

We rated the practice as good for providing caring services .

Kindness, respect and compassion

Staff treated patients with kindness, respect and compassion.

- Feedback from patients was positive about the way staff treat people.
- Staff understood patients' personal, cultural, social and religious needs.
- The practice gave patients timely support and information.

Involvement in decisions about care and treatment

Staff helped patients to be involved in decisions about care and treatment. They were aware of the Accessible Information Standard (a requirement to make sure that patients and their carers can access and understand the information that they are given.)

- Staff communicated with people in a way that they could understand, for example, communication aids and easy read materials were available.
- Staff helped patients and their carers find further information and access community and advocacy services. They helped them ask questions about their care and treatment.
- The practice proactively identified carers and supported them.

Privacy and dignity

The practice respected patients' privacy and dignity.

- Reception staff knew that if patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.
- Staff recognised the importance of people's dignity and respect. They challenged behaviour that fell short of this.

Please refer to the Evidence Tables for further information.

Are services responsive to people's needs?

We rated the practice, and all of the population groups, as good for providing responsive services

Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

- The practice understood the needs of its population and tailored services in response to those needs.
- Telephone GP consultations were available which supported patients who were unable to attend the practice during normal working hours.
- The facilities and premises were appropriate for the services delivered.
- The practice made reasonable adjustments when patients found it hard to access services.
- The practice provided effective care coordination for patients who were more vulnerable or who had complex needs. They supported them to access services both within and outside the practice.
- Care and treatment for patients with multiple long-term conditions and patients approaching the end of life was coordinated with other services.

Older people:

- All patients had a named GP who supported them in whatever setting they lived, whether it was at home or in a care home or supported living scheme.
- The practice was responsive to the needs of older patients, and offered home visits and urgent appointments for those with enhanced needs. The GPs and practice nurses also accommodated home visits for those who had difficulties getting to the practice due to limited local public transport availability or due to their medical condition.
- There was a medicines delivery service for housebound patients.

People with long-term conditions:

- Patients with a long-term condition received an annual review to check their health and medicines needs were being appropriately met. Multiple conditions were reviewed at one appointment, and consultation times were flexible to meet each patient's specific needs.
- The practice held regular meetings with the local district nursing team to discuss and manage the needs of patients with complex medical issues.

- The practice staff worked with the local GP lead to provide an enhanced service for patients with diabetes to avoid patients travelling to the hospital for appointments.

Families, children and young people:

- We found there were systems to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of accident and emergency (A&E) attendances. Records we looked at confirmed this.
- Immunisation clinics had been extended from two to three each week in order to meet the needs of families.
- All parents or guardians calling with concerns about a child under the age of 18 were offered a same day appointment when necessary.

Working age people (including those recently retired and students):

- The needs of this population group had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care. For example, extended opening hours were available until 8pm two days each week.
- Cervical screening was available at these evening surgeries and a designated practice nurse contacted the 25 year old group of patients by telephone to encourage their attendance.

People whose circumstances make them vulnerable:

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- People in vulnerable circumstances were easily able to register with the practice, including those with no fixed abode.
- A patient with learning disability required an injectable treatment which both the patient and carers had concerns about. Nursing staff adjusted clinics to arrange for the medicine to be available and administered it weekly at the practice this had reduced symptoms and improved quality of life for the patient.

People experiencing poor mental health (including people with dementia):

- Staff interviewed had a good understanding of how to support patients with mental health needs and those patients living with dementia.

Are services responsive to people's needs?

- Patients were proactively screened for dementia by the nursing team, signs in the practice were suitable for people with dementia and carers were introduced to dementia cafes and the local carers service. A distressed patient with dementia who was seen in the main reception area was accompanied up to the practice and promptly seen by a clinician. Staff contacted social services, arranged for the patients' medicines to be collected and administered safely and took him home.

Timely access to care and treatment

Patients were able to access care and treatment from the practice within an acceptable timescale for their needs.

- Patients had timely access to initial assessment, test results, diagnosis and treatment.
- Waiting times, delays and cancellations were minimal and managed appropriately.
- Patients with the most urgent needs had their care and treatment prioritised.
- Patients reported that the appointment system was easy to use.

Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

- Information about how to make a complaint or raise concerns was available. Staff treated patients who made complaints compassionately.
- The complaint policy and procedures were in line with recognised guidance. The practice learned lessons from individual concerns and complaints and also from analysis of trends. It acted as a result to improve the quality of care. For example, following complaints about telephone access the practice joined the prescription hub which is separately accessible from the practice telephone line. Additionally online access to prescription requests was promoted. This had resulted in reducing calls to the main practice number and better access for patients.

Please refer to the Evidence Tables for further information.

Are services well-led?

We rated the practice as good for providing a well-led service.

Leadership capacity and capability

Leaders had the capacity and skills to deliver high-quality, sustainable care.

- Leaders were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.
- Leaders at all levels were visible and approachable. They worked closely with staff and others to make sure they prioritised compassionate and inclusive leadership.
- The practice had effective processes to develop leadership capacity and skills, including planning for the future leadership of the practice.

Vision and strategy

The practice had a clear vision and credible strategy to deliver high quality, sustainable care.

- There was a clear vision and set of values. The practice had a realistic strategy and supporting improvement plans to achieve priorities. The practice developed its vision, values and strategy jointly with patients, staff and external partners.
- Staff were aware of and understood the vision, values and strategy and their role in achieving them.
- The strategy was in line with health and social priorities across the region. The practice planned its services to meet the needs of the practice population.
- The practice monitored progress against delivery of the strategy.

Culture

The practice had a culture of high-quality sustainable care.

- Staff stated they felt respected, supported and valued. They were proud to work in the practice.
- The practice focused on the needs of patients.
- Leaders and managers acted on behaviour and performance inconsistent with the vision and values.
- Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the duty of candour.

- Staff we spoke with told us they were able to raise concerns and were encouraged to do so. They had confidence that these would be addressed.
- There were processes for providing all staff with the development they need. This included appraisal and career development conversations. All staff received regular annual appraisals in the last year. Staff were supported to meet the requirements of professional revalidation where necessary.
- Clinical staff were considered valued members of the practice team. They were given protected time for professional development and evaluation of their clinical work.
- There was a strong emphasis on the safety and well-being of all staff.
- The practice actively promoted equality and diversity. Staff had received equality and diversity training. Staff felt they were treated equally.
- There were positive relationships between staff and teams.

Governance arrangements

There were clear responsibilities, roles and systems of accountability to support good governance and management.

- Structures, processes and systems to support good governance and management were clearly set out, understood and effective. The governance and management of partnerships, joint working arrangements and shared services promoted interactive and co-ordinated person-centred care.
- Staff were clear on their roles and accountabilities including in respect of safeguarding and infection prevention and control.
- With the exception of checks and assessments relating to the premises practice leaders had established proper policies, procedures and activities to ensure safety and assured themselves that they were operating as intended.

Managing risks, issues and performance

There were clear processes for managing risks, issues and performance..

Are services well-led?

- There were some effective processes to identify, understand, monitor and address current and future risks including risks to patient safety. However the staff were unable to monitor risks associated with the building due to lack of access to the records.
- The practice had processes to manage current and future performance. Performance of employed clinical staff could be demonstrated through audit of their consultations, prescribing and referral decisions. Practice leaders had oversight of national and local safety alerts, incidents, and complaints.
- Clinical audit had a positive impact on quality of care and outcomes for patients, however there was no planned programme of clinical audit. There was clear evidence of action to change practice to improve quality with the actions of staff and in conjunction with the patient reference group.
- The practice had plans in place and had trained staff for major incidents.
- The practice implemented service developments and where efficiency changes were made this was with input from clinicians to understand their impact on the quality of care.

Appropriate and accurate information

The practice acted on appropriate and accurate information.

- Quality and operational information was used to ensure and improve performance. Performance information was combined with the views of patients.
- Quality and sustainability were discussed in relevant meetings where all staff had sufficient access to information.
- The practice used performance information which was reported and monitored and management and staff were held to account.
- The information used to monitor performance and the delivery of quality care was accurate and useful. There were plans to address any identified weaknesses.

- The practice used information technology systems to monitor and improve the quality of care.
- The practice submitted data or notifications to external organisations as required.
- There were robust arrangements in line with data security standards for the availability, integrity and confidentiality of patient identifiable data, records and data management systems.

Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

- A full and diverse range of patients', staff and external partners' views and concerns were encouraged, heard and acted on to shape services and culture. There was an active patient participation group.
- The service was transparent, collaborative and open with stakeholders about performance.

Continuous improvement and innovation

There was evidence of systems and processes for learning, continuous improvement and innovation.

- There was a focus on continuous learning and improvement.
- Staff knew about improvement methods and had the skills to use them.
- The practice made use of internal and external reviews of incidents and complaints. Learning was shared and used to make improvements.
- Leaders and managers encouraged staff to take time out to review individual and team objectives, processes and performance.

Please refer to the Evidence Tables for further information.
