Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Woodland Drive Medical Centre on 18 January 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand.
- Patients said they found it easy to make an appointment with a named GP and that there was continuity of care, with urgent appointments available the same day.

- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the Duty of Candour.

We saw three areas of outstanding practice:

- Patients told us that the nurse would arrive at work early to see a patient who required regular treatment but could not attend during normal nurse appointment times.
- The nurse reviewed all unplanned hospital admissions and identified those who attended on multiple occasions. These patients were then sent an appointment to discuss any health or social needs with the nurse and she would work closely with the GP, community matrons and other members of the multidisciplinary team with the aim to reduce hospital attendance. We saw evidence of a reduction in unplanned hospital attendance and one patient had not had to attend hospital for six months since this support was implemented.

Summary of findings

- We were also told that practice staff noticed an elderly patient becoming increasingly unkempt. A member of staff suggested they make him an appointment, he agreed and from this, support was made available through social services. We were told this had made a difference to the patient and his family.

Professor Steve Field (CBE FRCP FFPH FRCGP)
Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

Good

- There was an effective system in place for reporting and recording significant events.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information and a verbal and written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Are services effective?

The practice is rated as good for providing effective services.

Good

- Data from the Quality and Outcomes Framework showed patient outcomes were at or above average for the locality and compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with multidisciplinary teams to understand and meet the range and complexity of patients' needs.

Are services caring?

The practice is rated as good for providing caring services.

Good

- Data from the National GP Patient Survey showed patients rated the practice as comparable to others for almost all aspects of care. For example, 88% of respondents said the GP was good at listening to them compared to the CCG average of 87% and national average of 89%.
- Feedback from patients about their care and treatment was consistently and strongly positive.

Summary of findings

- Staff were motivated and inspired to offer kind and compassionate care and worked to overcome obstacles to achieving this. For example, patients told us that the nurse would regularly arrive at work early to see a patient who could not attend during the usual appointment times for their treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified. We were told that the provider was engaging with the local public transport provider to improve bus services to the practice.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand, and the practice responded quickly when issues were raised. Learning from complaints was shared with staff and other stakeholders. There were clear instructions on how to complain on the practice web site and how to involve outside agencies if not resolved.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to this.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.

Good

Summary of findings

- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken
- The practice proactively sought feedback from staff and patients, which it acted on. The virtual patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.

Good

People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- There was some outstanding practice in that the nurse reviewed all unplanned hospital admissions and identified those who attended on multiple occasions, particularly those with long term conditions. These patients were then sent an appointment to discuss any health or social needs with the nurse and any long term condition reviews outstanding. They then worked closely with the GPs, community matrons and other members of the multidisciplinary team with the aim to reduce hospital attendance. We saw evidence of a reduction in unplanned hospital attendance for several patients.
- Performance for diabetes related indicators were similar to the CCG average and national average and plans were in place to improve these figures with the support offered by the multidisciplinary team.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

Families, children and young people

The practice is rated as good for the care of families, children and young people.

Good

Summary of findings

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Rates were relatively high for all standard childhood immunisations.
- In the last 12 months, 76% of patients diagnosed with asthma were reviewed.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- Patients told us that the nurse would arrive at work early to see a patient who required regular treatment but could not attend during normal nurse appointment times.

Good

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with multi-disciplinary teams in the case management of vulnerable people.
- The practice informed patients whose circumstances could make them vulnerable about how to access various support groups and voluntary organisations.

Good

Summary of findings

- Staff knew how to recognise signs of abuse in adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people living with dementia).

- In the last 12 months, 74% of patients diagnosed with dementia had received a face to face review of their care, which was comparable to the national average.
- Of people experiencing poor mental health, 87% had received an annual physical health check. This was comparable to the national average
- The practice regularly worked with multi disciplinary teams in the case management of people experiencing poor mental health, including those living with dementia.
- The practice carried out advance care planning for patients living with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and those living with dementia.

Good

Summary of findings

What people who use the service say

The national GP patient survey results published on 2 July 2015. The results showed the practice was performing in line with local and national averages. There were 270 survey forms distributed and 111 were returned. This represented 2% of the practice's patient list.

- 73% found it easy to get through to this surgery by phone compared to a CCG average of 67% and a national average of 73%.
- 86% were able to get an appointment to see or speak to someone the last time they tried (CCG average 82%, national average 85%).
- 76% described the overall experience of their GP surgery as fairly good or very good (CCG average 71%, national average 73%).

- 78% said they would definitely or probably recommend their GP surgery to someone who has just moved to the local area (CCG average 77%, national average 78%).

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 30 comment cards which were all positive about the standard of care received. One respondent said they had to wait five days for an appointment, however all the patients we spoke with were satisfied with the appointment system.

We spoke with six patients during the inspection. All these patients said they were satisfied with the care they received and thought staff were approachable, committed and caring. They spoke highly of all the staff and many commented on how helpful the practice staff were.

Woodland Drive Medical Centre

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser and a practice manager specialist adviser.

Background to Woodland Drive Medical Centre

Woodland Drive Medical Centre was purpose built in 2014. Located near the centre of Barnsley, it provides general medical services for 4698 patients. It was previously known as Dodworth Road Surgery and was located closer to the town centre in a converted terraced house with no parking facilities.

The practice catchment area is classed as within the group of the fourth most deprived areas in England.

There are two male GPs and two female GPs who are supported by a practice nurse, a health care assistant, a practice manager and administration staff.

The reception, waiting areas, consulting rooms and disabled toilet facilities are on the ground floor. There is step free access into the building and provides easy access for those in wheelchairs or with pushchairs.

There is a large car park to the side of the building with several parking spaces for patients with a disability.

There is a branch surgery located in the Roundhouse Medical Centre four miles away. We visited this practice as well, it is separately registered although it has the same patient list as Woodland Drive Medical Centre and patients can visit both sites.

The practice is open between 8.00am and 8.00pm on a Monday and Tuesday and 8.00am to 6.30pm Wednesday to Friday.

Appointments are available from 8.30am to 1.00pm and 3.00pm to 7.30pm on a Monday and Tuesday and from 8.30am to 11.00am and 3.00pm to 5.30pm Wednesday to Friday.

Extended surgery hours are offered on Monday and Tuesday evenings, 6.00pm to 8.00pm. In addition to pre-bookable appointments that can be booked up to six weeks in advance, urgent appointments are also available for people that needed them.

Woodland Drive Medical Centre is registered to provide; diagnostic and screening procedures, maternity and midwifery services, family planning and the treatment of disease, disorder or injury from Woodland Drive Medical Centre, Woodland Drive, Barnsley, South Yorkshire, S70 6QW and at the Roundhouse Medical Centre, Wakefield Rd, Barnsley, South Yorkshire S71 1TH.

Why we carried out this inspection

We inspected this service as part of our new comprehensive inspection programme.

Detailed findings

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the registered provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 18 January 2016. During our visit we:

- Spoke with a range of staff including, a GP, the nurse, the practice manager and reception staff and spoke with patients who used the service.
- Observed interactions between staff and patients and talked with carers and/or family members.
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people.
- People with long-term conditions.
- Families, children and young people.
- Working age people (including those recently retired and students).
- People whose circumstances may make them vulnerable.
- People experiencing poor mental health (including people living with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports national patient safety alerts and minutes of meetings where these were discussed. Lessons were shared to make sure action was taken to improve safety in the practice. For example, following a fax not being received by the palliative care team, it was decided to follow up every fax to them with a telephone call to confirm receipt.

When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information, a verbal and written apology and were told about any actions to improve processes to prevent the same thing happening again.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and adults from abuse that reflected relevant legislation and local requirements and policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training relevant to their role. GPs were trained to Safeguarding children level three.
- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones had attended in house training for the role and had received a Disclosure and Barring Service check (DBS check). (DBS checks identify whether

a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).

- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received training and were booked in for update training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency drugs and vaccinations, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing and security). The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Prescription pads were securely stored and there were systems in place to monitor their use. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. The practice had a system for production of Patient Specific Directions to enable the Health Care Assistant to administer vaccinations after specific training when a doctor or nurse were on the premises.
- We reviewed two personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.
- There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked

Are services safe?

to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and Legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure that enough staff were on duty.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.

- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. The defibrillator belonged to another healthcare provider within the building and was accessible at all times. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and fit for use.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met peoples' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results showed the practice had achieved 95% of the total number of points available, with 9% exception reporting. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects). This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/15 showed;

- Performance for diabetes related indicators at 84% was similar to the CCG average of 84% and the national average of 90%.
- The percentage of patients with hypertension having regular blood pressure tests at 100% was better than the CCG national average of 95% and similar to the national average of 98%.
- Performance for mental health related indicators at 92% was better than the CCG average of 82% and similar to the national average of 93%.

Clinical audits demonstrated quality improvement.

- There had been seven clinical audits completed in the last two years, two of these were completed audits where the improvements made were implemented and monitored.

- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result included the planning of a trial of a triage system via email. It would be advertised to patients that two email addresses were available, one for routine appointment requests and one for urgent appointment requests. The patient would request an appointment, explaining why it was necessary and these would be read and triaged by the GP. The patient would be given advice or seen by the GP or nurse as required. This was to make access to appointments easier, enabling patients to request appointments by sending an email at a time that was convenient for them.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. It covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff for example, for those reviewing patients with long-term conditions. Staff administering vaccinations and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccinations could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support during sessions, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had had an appraisal within the last 12 months.

Are services effective?

(for example, treatment is effective)

- Staff received training that included: safeguarding, fire procedures, basic life support and information governance awareness. Staff had access to and made use of e-learning training modules and in house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and its intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results. Information such as NHS patient information leaflets were also available.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care services to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. We saw evidence that multi-disciplinary team meetings took place and that care plans were routinely reviewed and updated.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support.

- These included patients with palliative care needs, carers, those at risk of developing a long term condition and those requiring advice on their diet, smoking and alcohol cessation. Patients were then signposted to the relevant service.
- The practice ran a social enterprise scheme, involving the local college, council and the local population. Patients were given access to courses at the local college to become health trainers and could then use their knowledge to improve lifestyles in the local population. The scheme also enabled patients to develop new skills, gain qualifications and improve confidence while educating others.
- The practice's uptake for the cervical screening programme was 81% which was comparable to the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 97% to 98% and five year olds from 98% to 100%.

Flu vaccination rates for the over 65s were 75% which was comparable to the national average of 73% and at risk groups 59% which was above the national average of 52%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for people aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All 30 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect. One respondent said it took five days to get an appointment with a GP, however all the patients we spoke with were satisfied with the appointment system.

We spoke with one member of the patient participation group. They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required. We were told that practice staff noticed an elderly patient becoming increasingly unkempt. A member of staff suggested they make him an appointment, he agreed and from this, support was made available through social services. We were told this had made a difference to the patient and his family.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was comparable to others in the area for satisfaction scores on consultations with GPs and nurses. For example:

- 88% said the GP was good at listening to them compared to the CCG average of 87% and national average of 89%.

- 87% said the GP gave them enough time (CCG average 87%, national average 87%).
- 94% said they had confidence and trust in the last GP they saw (CCG average 95%, national average 95%)
- 88% said the last GP they spoke to was good at treating them with care and concern (CCG average 85%, national average 85%).
- 87% said the last nurse they spoke to was good at treating them with care and concern (CCG average 91%, national average 90%).
- 86% said they found the receptionists at the practice helpful (CCG average 87%, national average 87%).

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback on the comment cards we received was also positive and aligned with these views.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 86% said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 85% and national average of 86%.
- 82% said the last GP they saw was good at involving them in decisions about their care (CCG average 81% , national average 81%)
- 83% said the last nurse they saw was good at involving them in decisions about their care (CCG average 86% ,national average 85%)

Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.

Patient and carer support to cope emotionally with care and treatment

Are services caring?

Notices in the patient waiting room told patients how to access a number of support groups and organisations.

The practice's computer system alerted GPs if a patient was also a carer. Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified.

There were longer appointments available for patients with a learning disability.

- Home visits were available for older patients and patients who would benefit from these.
- Same day appointments were available for children and those with serious medical conditions.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately/were referred to other clinics for vaccines available privately.
- There were disabled facilities, a hearing loop and translation services available.
- The provider was engaging with the local public transport provider to improve bus services to the practice.

Access to the service

The practice was open between 8.00am and 8.00pm on a Monday and Tuesday and 8.00am to 6.30pm Wednesday to Friday.

Appointments were from 8.30am to 1.00pm and 3.00pm to 7.30pm on a Monday and Tuesday and from 8.30am to 11.00am and 3.00pm to 5.30pm Wednesday to Friday.

Extended surgery hours were offered on Monday and Tuesday evenings, 6.00pm to 8.00pm. In addition to pre-bookable appointments that could be booked up to six weeks in advance, urgent appointments were also available for people that needed them.

A trial of a triage system via email was planned. It would be advertised to patients that two email addresses were available, one for routine appointment requests and one for urgent appointment requests. The patient would request an appointment, explaining why it was necessary and these would be read and triaged by the GP. The patient

would be given advice or seen by the GP or nurse as required. This was to make access to appointments easier, enabling patients to request appointments by sending an email at a time that was convenient for them.

Results from the national GP patient survey showed that patients' satisfaction with how they could access care and treatment was comparable to local and national averages.

- 86% of patients were satisfied with the practice's opening hours compared to the CCG average of 77% and national average of 75%.
- 73% patients said they could get through easily to the surgery by phone (CCG average 67%, national average 73%).
- 62% patients said they always or almost always see or speak to the GP they prefer (CCG average 55%, national average 60%).

People told us on the day of the inspection that they were able to get appointments when they needed them.

Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Information about how to complain was available and easy to understand, and the practice responded quickly when issues were raised. Learning from complaints was shared with staff and other stakeholders. Patients wanting to complain were given written instructions on how to involve outside agencies if not resolved. These were easy to find on the practice web site.
- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system such as posters and written information and verbal information would be given if required.

We looked at two complaints received in the last 12 months and found these were satisfactorily handled and dealt with in a timely open way. Lessons were learnt from concerns and complaints and action was taken to as a result to improve the quality of care.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit which was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

Leadership and culture

The GPs in the practice had the experience, capacity and capability to run the practice and ensure high quality care. They prioritised safe, high quality and compassionate care. The practice manager was visible in the practice and staff told us they were approachable and always took the time to listen to all members of staff.

The provider was aware of and complied with the requirements of the Duty of Candour. The GPs encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents

When there were unexpected or unintended safety incidents:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology
- They kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident in doing so and felt supported if they did.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The practice had a virtual PPG who communicated regularly, were involved in patient surveys and submitted proposals for improvements to the practice management team. For example, recent action taken as a result included the planning of a trial of a triage system via email. It would be advertised to patients that two email addresses were available, one for routine appointment requests and one for urgent appointment requests. The patient would request an appointment, explaining why it was necessary and these would be read and triaged by the GP. The patient would be given advice or seen by the GP or nurse as required. This was to make access to appointments easier, enabling patients to request appointments by sending an email at a time that was convenient for them.
- The practice had gathered feedback from staff through the NHS Friends and Family Test and appraisals. Staff

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

Continuous improvement

There was a strong focus on continuous learning and improvement at all levels within the practice.
