Overall summary

This service is rated as Good overall.

The key questions are rated as:

Are services safe? – Good

Are services effective? – Good

Are services caring? – Good

Are services responsive? – Good

Are services well-led? – Good

We carried out an announced comprehensive inspection at Victoria as part of our inspection programme. Victoria is part of The London Travel Clinic which provides travel immunisations, treatment and advice to fee paying patients.

We had previously inspected this service as part of our unrated programme of independent health inspections. At our last inspection undertaken on 20 August 2018 we found that the service was in breach of regulation 12 (safe care and treatment) and regulation 17 (good governance) of The Health and Social Care Act 2008 (Regulated

Summary of findings

Activities) Regulations 2014. At that inspection we found that the provider had not adequately mitigated risks associated with infection control and fire safety and the service had not assessed the need for all emergency medicines. In addition we found that there was no ongoing quality improvement activity programme, there was no mechanism in place to review and act on patient feedback and the business continuity plan, medicines policy and policies related to information governance were not specific to the site.

At this inspection we found that these concerns had been resolved.

The clinical nurse lead for the service is the registered manager. A registered manager is a person who is registered with the Care Quality Commission to manage the service. Like registered providers, they are 'registered persons'. Registered persons have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated Regulations about how the service is run.

One patient provided feedback to CQC about the service. The patient said that the treatment provided was quick and efficient and that their needs were met.

Our key findings were:

- The provider had systems in place in relation to safeguarding.
- Risks were adequately assessed, addressed or mitigated.
- Appropriate emergency equipment was available on site and staff knew what to do if a patient presented with symptoms of sepsis.

- There were systems in place to report and discuss significant events.
- Medicines were appropriately managed and there were systems in place to respond to safety alerts.
- Care and treatment provided was effective and met patient needs.
- There were systems to review consultations, feedback to staff and implement improvements where needed.
- Feedback from patients was positive about access to treatment and the care provided and there was a system for managing complaints.
- Services were designed to respond to the needs of patients.
- Leadership was visible and staff said that they felt happy to raise concerns or issues that arose.
- Governance systems were present in most areas although there were some instances where the provider did not have effective systems in place to oversee risk.

The areas where the provider **should** make improvements are:

- Consider ways to better accommodate patients with accessibility needs.
- Include details of all staff working at the site in the business continuity plan.

Dr Rosie Benneyworth BM BS BMedSci MRCGP

Chief Inspector of Primary Medical Services and Integrated Care

Victoria

Detailed findings

Background to this inspection

Victoria provides travel health services including vaccinations, medicines and advice on travel related issues to both adults and children. The clinic is based at Level 19, Portland House,

Bressenden Place, SW1E 5RS. The location has four linked sites Vauxhall (Vintage House, 37 Albert Embankment, London, SE1 7TL), Chelsea (The Courtyard, 250 Kings Rd, London, SW3 5UE), Finchley (**311**Dental care, 311 Ballards Lane, North Finchley, London N12 8LY), Orpington (Enso House, 3 New Mill Road, Orpington BR5 3TW).

The service sees between 200 and 500 patients a year at the sites associated with Victoria. The service is a designated yellow fever vaccination centre. Services are available to any fee-paying patient. The service had corporate account clients for businesses to access travel health services for their employees.

The service is in an accessible purpose-built building.

Patients are directed to the fifteenth floor of the building which is accessible via lift or stairs, to the provider's reception and waiting area. The areas used by the service include consultation rooms, administrative space and accessible patient and staff facilities.

Services are available by appointment only. Appointment times vary fortnightly.

Appointments are either available from Tuesday and Thursday 1-5pm. Or Monday, Wednesday 8.30am-8pm and Thursday twice monthly 12.30pm-8pm Friday 9am -5pm, Saturdays 10am-3pm

The London Travel Clinic is part of Vaccination UK. At a local level the service is run by a travel nurse specialist,

who is the nurse manager and operations manager, a reception and administration manager and four nurses. Those staff who are required to register with a professional body were registered with a licence to practice.

The service is registered with the CQC to provide the regulated activities of diagnostic and screening procedures and treatment of disease, disorder or injury.

Before visiting, we reviewed a range of information we hold about the service and asked other organisations to share what they knew. During our visit we:

- Spoke with clinical and non-clinical staff including the clinical lead, the operations manager, a nurse and an administrative staff member.
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed service policies, procedures and other relevant documentation.
- Inspected the premises and equipment used by the service.
- Reviewed CQC comment cards completed by service users.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions therefore formed the framework for the areas we looked at during the inspection.

Are services safe?

Our findings

We rated safe as Good because:

The provider had systems in place to monitor and address risks and ensure that patients were kept safe.

Safety systems and processes

The service had clear systems to keep people safeguarded from abuse.

- The provider conducted safety risk assessments. It had appropriate safety policies, which were regularly reviewed and communicated to staff including locums. They outlined clearly who to go to for further guidance. Staff received safety information from the service as part of their induction and refresher training. The service had systems to safeguard children and vulnerable adults from abuse.
- The service had systems in place to assure that an adult accompanying a child had parental authority.
- The service worked with other agencies to support patients and protect them from neglect and abuse. Staff took steps to protect patients from abuse, neglect, harassment, discrimination and breaches of their dignity and respect.
- The provider carried out
- All staff received up-to-date safeguarding and safety training appropriate to their role. They knew how to identify and report concerns. The site had developed a standard operating procedure which included information on the service's safeguarding lead and the local safeguarding contacts.
- Risks were assessed and managed appropriately.
- The provider had not included scales in their last round of equipment calibration. However the scales had been purchased within the last 12 months and all other medical equipment had been calibrated.
- There were systems for safely managing healthcare waste and effective systems to manage all other aspects of infection prevention control.

Risks to patients

There were systems to assess, monitor and manage risks to patient safety.

- There
- There was an effective induction system for staff tailored to their role.
- Staff had all received basic life support training.
- There were suitable medicines and equipment to deal with medical emergencies which were stored appropriately and checked regularly.
- When there were changes to services or staff the service assessed and monitored the impact on safety.
- There were appropriate indemnity arrangements in place. Staff were either covered by a group policy which provided indemnity cover for all clinical staff working at any of their sites or, if they were employed on a bank basis, the provider ensured that these staff members had appropriate cover in place.
- There was a business continuity plan in place but this did not include contact details for all staff working at the service.

Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment to patients.

- Individual care records were written and managed in a way that kept patients safe. The care records we saw showed that information needed to deliver safe care and treatment was available to relevant staff in an accessible way.
- The service had systems for sharing information with staff and other agencies to enable them to deliver safe care and treatment.
- The service had a system in place to retain medical records in line with Department of Health and Social Care (DHSC) guidance in the event that they cease trading. Records were all stored on a virtual private network. Additionally the service would always provide patients with a copy of their records after each consultation.
- Clinicians made appropriate and timely referrals in line with protocols and up to date evidence-based guidance.

Safe and appropriate use of medicines

The service had reliable systems for appropriate and safe handling of medicines.

Are services safe?

- The systems and arrangements for managing medicines, including vaccines, emergency medicines minimised risks
- The service carried out regular reviews of clinical records to ensure prescribing was in line with best practice guidelines for safe prescribing.
- Staff prescribed, administered or supplied medicines to patients and gave advice on medicines in line with legal requirements and current national guidance. Processes were in place for checking medicines and staff kept accurate records of medicines.

Track record on safety and incidents

The service did not have adequate oversight of third party risk management activities to ensure safety.

- The service ensured that risks associated with the premises, including fire, legionella and those associated with infection prevention control were assessed, monitored and mitigated.

Lessons learned and improvements made

The service had systems in place to learn and make improvements when things went wrong.

- There was a system for recording and acting on significant events. Staff understood their duty to raise concerns and report incidents and near misses. Leaders and managers supported them when they did so.
- There were adequate systems for reviewing and investigating when things went wrong. The service learned and shared lessons identified themes and took action to improve safety in the service although there had been no reported significant events in the past 12 months
- The service acted on and learned from external safety events as well as patient and medicine safety alerts. The service had an effective mechanism in place to disseminate alerts to all members of the team including sessional and agency staff through their online patient record system.

Are services effective?

(for example, treatment is effective)

Our findings

We rated effective as Good because:

The needs of patients were assessed, and treatment delivered in line with guidance, there was a system to review the quality of care and treatment provided and make improvements, staff had the requisite skills and training for the role and arrangements were in place to ensure consent to care and treatment was consistently sought.

Effective needs assessment, care and treatment

The provider had systems to keep clinicians up to date with current evidence-based practice. We saw evidence that clinicians assessed needs and delivered care and treatment in line with current legislation, standards and guidance

- Patients' immediate and ongoing needs were fully assessed. Where appropriate this included their clinical needs and their mental and physical wellbeing. The service used medicine information resources as a basis for travel-related advice, vaccination and to inform practice. For example, Green Book, National Travel Health Network and Centre (NaTHNaC), TRAVAX and British National Formulary (BNF). We saw that staff used a multi-drug interaction checker Medscape to check for contraindications.
- The service undertook periodic reviews of staff consultations to ensure that they were delivering care and treatment in accordance with legislation and guidance.
- Clinicians performed risk assessments for each patient to ensure that it was safe to administer vaccines.
- We saw no evidence of discrimination when making care and treatment decisions.

Monitoring care and treatment

The service was involved in quality improvement activity.

- The service undertook periodic reviews of 15 patient records every 3 months to ensure that staff were following clinical guidance and best practice. audits would assess whether or not staff were documenting

contact information, travel information, medical history and that consent was appropriately recorded. Feedback from these reviews was given which would result in improvement in the quality of clinical care.

- The practice completed weekly infection control checks and checks of the fire escape routes, monthly hand hygiene audits and checks of the vaccine fridges to ensure that medicines were stored correctly and in date.

Effective staffing

Staff had the skills, knowledge and experience to carry out their roles.

- All staff were appropriately qualified. The provider had an induction programme for all newly appointed staff. There was a programme of nurse led mentorship and clinical supervision.
- Nurses were registered with the Nursing and Midwifery Council and were up to date with revalidation.
- The provider understood the learning needs of staff and provided protected time and training to meet them. Up to date records of skills, qualifications and training were maintained.
- Nursing staff who delivered immunisation had received specific training and could demonstrate how they stayed up to date.

Coordinating patient care and information sharing

Staff worked together, and worked well with other organisations, to deliver effective care and treatment.

- Patients would be provided with a copy of their notes documenting the vaccines that they had received to enable patients to share this with their GP.
- If the service identified that patients needed to be referred to another service, they would tell the patient to contact their GP.
- Vaccination costs and consultation fees were displayed on the service's website. The service's clinical system allowed for a total overview of costs to be provided to patients prior to commencing treatment. If patients did not wish to have the immunisations; the provider would advise them of other providers and which vaccinations could be provided by the NHS.
- Before providing treatment, doctors at the service ensured they had adequate knowledge of the patient's health, any relevant test results and their medicines history.

Are services effective?

(for example, treatment is effective)

Supporting patients to live healthier lives

Staff were consistent and proactive in empowering patients and supporting them to manage their own health and maximise their independence.

- Where appropriate, staff gave people advice, so they could self-care.
- Risk factors were identified, highlighted to patients and where appropriate highlighted to their normal care provider for additional support.
- Where patients' needs could not be met by the service, staff redirected them to the appropriate service for their needs.

Consent to care and treatment

The service obtained consent to care and treatment in line with legislation and guidance.

- Staff understood the requirements of legislation and guidance when considering consent and decision making. Staff ticked a box on the medical assessment form during consultation and showed it to patients.
- Staff supported patients to make decisions. Where appropriate, they told us that they would assess and recorded a patient's mental capacity to make a decision.
- The service monitored the process for seeking consent appropriately.

Are services caring?

Our findings

We rated caring as Good because:

Feedback from patients and the observations of staff interacting with patients indicated that patients were treated with kindness compassion and respect, there were systems in place to ensure that patients were involved and fully understood the treatment provided and the setup of the service ensured that privacy and dignity were maintained.

Kindness, respect and compassion

Staff treated patients with kindness, respect and compassion.

- The service sought feedback on the quality of care patients received. The feedback we reviewed was mostly positive about the service provided.
- Feedback from patients was positive about the way staff treated people.
- Staff understood patients' personal, cultural, social and religious needs. They displayed an understanding and non-judgmental attitude to all patients.
- The service gave patients timely support and information.

Involvement in decisions about care and treatment

Staff helped patients to be involved in decisions about care and treatment.

- Interpretation services were available for patients who did not have English as a first language. Patients were also told about multi-lingual staff who might be able to support them. However, information leaflets were not available in easy read formats, to help patients be involved in decisions about their care.
- Patients told us through comment cards, that they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them.

Privacy and Dignity

The service respected patients' privacy and dignity.

- Staff recognised the importance of people's dignity and respect.
- Staff knew that if patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

We rated responsive as Good because:

The service delivered care and treatment which met the needs of their patients, the service was easy to access and there were systems in place to listen and respond to complaints.

Responding to and meeting people's needs

The service organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

- The service saw both adults and children. Patients could be seen outside normal working hours with morning, evening and weekend appointments.
- Appointments were often available the same day including by walk in
- Services were available by appointment only. Appointment times vary fortnightly. Appointments are either available from Tuesday and Thursday 1-5pm. Or Monday, Wednesday 8.30am-8pm and Thursday twice monthly 12.30pm-8pm Friday 9am -5pm, Saturdays 10am-3pm
- The premises were suitable for patients with mobility difficulties as the premises had accessible toilets and the clinic could be access by a lift.
- Interpreter services were available for patients who did not have English as a first language.
- The service was a designated yellow fever vaccination centre; patients could receive all their required vaccinations from the same service.
- Patient feedback consistently referred to the amount and quality of the information the service provided.

Timely access to the service

Patients were able to access care and treatment from the service within an appropriate timescale for their needs.

- Patients had timely access to appointments and the service kept waiting times and cancellations to a minimum.
- There was a 24-hour online booking system for patients to book appointments.
- Patients could contact the service via telephone and appointments would then be booked by the receptionist.

- The service provided time critical treatments post exposure such as rabies vaccinations. The service also directed patients to other local NHS services providing the treatment for free. Patients could start their post exposure treatment programme with the service and were provided with all the information needed to carry on their treatment elsewhere if required.
- Patient feedback showed that patients were satisfied with how they could access care and treatment. Patients provided feedback to the service using surveys. The results of the surveys were discussed at service meetings held every two months.
- Telephone translation services were available but there was a charge for using this service. The provider also could accommodate patients who spoke other languages with online translation software. There were no leaflets or information available for patients in other languages.
- The service had developed a "smart" ordering system which meant that they could bulk order vaccines if they knew that there would be shortages in supply.
- The service had a hearing loop though staff were unclear on what to do if patients presented with a visual impairment. The service told us that they could arrange a video consultation with a British Sign Language (BSL) interpreter.

Listening and learning from concerns and complaints

The service took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

The service took complaints and concerns seriously and had systems in place to respond to them appropriately and to improve the quality of care. Complaints were logged centrally by the provider. The complaint system was advertised in the waiting area and there was a mechanism to provide feedback online.

- The Operations Manager was responsible for dealing with complaints and the service had a complaints policy providing guidance for staff on how to handle a complaint.
- This location had received six complaints in the last 12 months. There was a poster in the reception area with contact information to enable patients to make comments or complaints.

Are services responsive to people's needs?

(for example, to feedback?)

- The service managed a spreadsheet centrally to record and analyse complaints, concerns and feedback including written and verbal feedback.
- We saw a record of one complaint related to the cost of treatment provided at the service. In response the

provider adapted their patient record system to enable nursing staff to calculate the total cost of treatment on the system, show this to the patient and confirm that the patient consented to the cost prior to treatment being initiated.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action?)

Our findings

We rated well-led as Good because:

Leadership was visible and approachable, and the provider had a vision to provide a high-quality service. Staff felt supported and there was some evidence of patient engagement. Although there was a governance framework which covered most areas of operation, there was limited oversight of third-party managed risks.

Leadership capacity and capability;

Leaders had the capacity and skills to deliver high-quality clinical care to patients.

- Leaders had the experience, capacity and skills to deliver the organisational strategy and staff were knowledgeable about issues and priorities relating to services.
- Staff told us leaders were visible, approachable and supportive.

Vision and strategy

The service had a clear vision and credible strategy to deliver high quality care and promote good outcomes for patients.

- There was a clear set of aims and set of values and the service had realistic objectives to enable them to achieve this.
- Staff were aware of and understood the aims and objectives and their role in achieving them.
- The service monitored progress against delivery of the strategy.

Culture

The service had a culture of high-quality sustainable care.

- Staff felt respected, supported and valued. They were proud to work for the service.
- The service focused on the needs of patients.
- Leaders and managers told us that they would act on behaviour and performance inconsistent with the vision and values.

- Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the duty of candour.
- Staff told us they could raise concerns and were encouraged to do so. They had confidence that these would be addressed. There were meetings between all staff working at the service every two months.
- There were processes for providing all staff with the development they need. This included appraisals and performance development plans. Staff received regular appraisals and were supported to meet the requirements of professional revalidation where necessary. Clinical staff were considered valued members of the team. They were given protected time for professional time for professional development and evaluation of their clinical work.
- There was a strong emphasis on the well-being of all staff. The service held events for staff twice annually and provided staff with a degree of flexible working where possible.
- The service actively promoted equality and diversity. It identified and addressed the causes of any workforce inequality. Staff had received equality and diversity training and no staff reported facing any discrimination.
- There were positive relationships between staff and management.

Governance arrangements

There were clear responsibilities, roles and systems of accountability to support good governance and management.

- Structures, processes and systems to support good governance and management were clearly set out, understood and effective.
- Staff were clear on roles and accountabilities within the organisation.
- Leaders had established policies and procedures although these were not always embedded.

Managing risks, issues and performance

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action?)

The service had systems in place for managing risks, issues and performance.

- There was an effective, process to identify, understand, monitor and address risks to patient safety.
- The service had processes to manage current and future performance. Performance of clinical staff could be demonstrated through audit of their consultations which would be used to improve the quality of care provided. Leaders had oversight of safety alerts, incidents, and complaints.
- The provider had plans in place and had trained staff for major incidents.

Appropriate and accurate information

The service acted on appropriate and accurate information.

- Quality and sustainability were discussed in relevant meetings where all staff had sufficient access to information.
- The service used performance information which was reported and monitored, and management and staff were held to account
- The information used to monitor performance and the delivery of quality care was accurate and useful. There were plans to address any identified weaknesses.
- The service submitted data or notifications to external organisations as required.
- There were robust arrangements in line with data security standards for the availability, integrity and confidentiality of patient identifiable data, records and data management systems.

Engagement with patients, the public, staff and external partners

The service involved patients, the public, staff and external partners to support high-quality sustainable services.

- The service encouraged and heard views and concerns from the public, patients, staff and external partners and acted on them to shape services and culture. The practice undertook patient surveys and the feedback provided was mostly positive.
- Staff said that they were able to provide feedback and that management were supportive.

Continuous improvement and innovation

There was evidence of systems and processes for learning, continuous improvement and innovation.

Clinical staff at the service participated in a travel health study day organised by Vaccination UK. Clinical staff who attended the study day heard about updates in world travel health and discussed case studies and best practice. All clinical staff who started working at the service were required to have an assessment of their competency in travel health and their competency using oxygen to respond in an emergency situation. The provider had a comprehensive induction process whereby clinical staff would shadow a clinician for a period of four weeks before being shadowed administering immunisations prior to being allowed to work independently.
