

Mr. Stuart Hodgson Rawmarsh Dental Practice Inspection Report

93 Kilnhurst Road Rawmarsh Rotherham S62 5NF Tel:01709 525395 Website: no website address

Date of inspection visit: 10 May 2017 Date of publication: 02/06/2017

Overall summary

We carried out this announced inspection on 10 May 2017 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

We told the NHS England area team and Healthwatch that we were inspecting the practice. They provided information about the practice facilities which we took into account.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

Rawmarsh Dental Practice is in Rotherham, South Yorkshire and provides NHS and occasional private treatment to adults and children.

There is ramp access for people who use wheelchairs and pushchairs. Car parking spaces are available near the practice.

Summary of findings

The dental team includes two dentists, three dental nurses, one dental hygienist, one receptionist and a practice manager. The practice has two treatment rooms.

The practice is owned by an individual who is the principal dentist there. They have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run.

On the day of inspection we collected 12 CQC comment cards filled in by patients. This information gave us a positive view of the practice.

During the inspection we spoke with two dentists, one dental nurse, one receptionist and the practice manager. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open: Monday to Friday 9:15am – 5:15pm

Our key findings were:

- The practice was clean and well maintained.
- The practice had infection control procedures which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The practice had systems to help them manage risk.
- The practice had suitable safeguarding processes and staff knew their responsibilities for safeguarding adults and children.
- The practice had thorough staff recruitment procedures.
- The clinical staff provided patients' care and treatment in line with current guidelines.

- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- The appointment system met patients' needs.
- The practice had effective leadership. Staff felt involved and supported and worked well as a team.
- The practice asked staff and patients for feedback about the services they provided.
- The practice dealt with complaints positively and efficiently.

We identified an area of notable practice.

We noted the practice infection prevention and control process was robust and methodically carried out. They responded proactively to incidents relating to the infection control process and implemented change for improvement. The practice regularly audited their infection prevention and control methods, using continuous monitoring and assurance techniques to confirm a safe and effective process was being delivered. The practice infection prevention and control education and training programme was systematic and embedded.

This was deemed notable practice, as it showed a commitment to infection prevention and control and the overall wellbeing of the people who use the service.

There were areas where the provider could make improvements. They should:

• Review the practice's protocols for the use of rubber dam for root canal treatment giving due regard to guidelines issued by the British Endodontic Society.

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

we always ask the following five questions of services.		
Are services safe? We found that this practice was providing safe care in accordance with the relevant regulations.	No action	\checkmark
The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.		
Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns.		
Staff were qualified for their roles and the practice completed essential recruitment checks.		
Premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.		
The practice had suitable arrangements for dealing with medical and other emergencies.		
We found areas for improvement with regard to using rubber dams for root canal treatment.		
Are services effective? We found that this practice was providing effective care in accordance with the relevant regulations.	No action	~
The dentists assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the treatment they received as very good, excellent and first class. The dentists discussed treatment with patients so they could give informed consent and recorded this in their records.		
The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.		
The practice supported staff to complete training relevant to their roles and had systems to help them monitor this.		
Are services caring? We found that this practice was providing caring services in accordance with the relevant regulations.	No action	✓
We received feedback about the practice from 12 people. Patients were positive about all aspects of the service the practice provided. They told us staff were helpful, caring and efficient. They said that they were given very good care at all times, and said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.		
We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.		
Are services responsive to people's needs? We found that this practice was providing responsive care in accordance with the relevant regulations.	No action	~

Summary of findings

The practice's appointment system was efficient and met patients' needs. Patients could get an appointment quickly if in pain. Staff considered patients' different needs. This included providing facilities for disabled patients and families with children. The practice had access to interpreter services and had arrangements to help patients with sight or hearing loss. The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.	
Are services well-led? We found that this practice was providing well-led care in accordance with the relevant regulations.	No action 🖌
The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and staff felt supported and appreciated.	
The practice team kept complete patient dental care records which were, clearly written or typed and stored securely.	
The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.	

Rawmarsh Dental Practice

Detailed findings

5 Rawmarsh Dental Practice Inspection Report 02/06/2017

Are services safe?

Our findings

Reporting, learning and improvement from incidents

The practice had policies and procedures to report, investigate, respond and learn from accidents, incidents and significant events. Staff knew about these and understood their role in the process.

The practice recorded, responded to and discussed all incidents to reduce risk and support future learning. We saw comprehensive evidence of the management of this process.

The practice received national patient safety and medicines alerts from the Medicines and Healthcare Products Regulatory Authority (MHRA). Relevant alerts were discussed with staff, acted on and stored for future reference.

Reliable safety systems and processes (including safeguarding)

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns. The practice had a whistleblowing policy. Staff told us they felt confident they could raise concerns without fear of recrimination.

We looked at the practice's arrangements for safe dental care and treatment. These included risk assessments which staff reviewed every year. The practice followed relevant safety laws when using needles and other sharp dental items. We found areas for improvement with regard to rubber dam usage during root canal treatments. We spoke with the dentist to identify if they used any other safety precautions during root canal treatments; no supporting evidence was presented. We brought this to the attention of the principal dentist who agreed to review their practice processes and bring them in line with the British Endodontic society guidance.

The practice had a business continuity plan describing how the practice would deal events which could disrupt the normal running of the practice.

Medical emergencies

Staff knew what to do in a medical emergency and completed training in emergency resuscitation and basic life support every year.

Emergency equipment and medicines were available as described in recognised guidance. Staff kept records of their checks to make sure these were available, within their expiry date, and in working order. We saw comprehensive evidence of the management of this process.

Staff recruitment

The practice had a staff recruitment policy and procedure to help them employ suitable staff. This reflected the relevant legislation. The practice gave an overview of all staff files and we looked at one staff recruitment file in-depth. These showed the practice followed their recruitment procedure.

Clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

Monitoring health & safety and responding to risks

The practice's health and safety policies and risk assessments were up to date and reviewed to help manage potential risk. These covered general workplace and specific dental topics.

The practice had current employer's liability insurance and checked each year that the clinicians' professional indemnity insurance was up to date.

A dental nurse worked with the dentists and dental hygienists when they treated patients.

Infection control

The practice had an infection prevention and control policy and procedures to keep patients safe. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM01-05) published by the Department of Health. Staff completed infection prevention and control training every year.

The practice had robust arrangements for transporting, cleaning, checking, sterilising and storing instruments in

Are services safe?

line with HTM01-05. The records showed equipment staff used for cleaning and sterilising instruments was maintained and used in line with the manufacturers' guidance.

We noted the practice infection prevention and control process was robust and methodically carried out. They responded proactively to incidents relating to the infection control process. After a sharps incident during manual cleaning of instruments, they discussed a change in protocol and embedded it within the practice. The practice regularly audited its infection control process by assessing the need for using an ultrasonic bath and washer disinfector against the manual cleaning technique and found their current methods were effective. Infection prevention and control training and staff knowledge was extensive throughout the practice and was lead strongly by a dedicated dental nurse. The practice produced protocols and illustrative flowcharts for each work station of the decontamination process. These permanent flowcharts and protocols gave information as to what was required at each stage of the decontamination process and the quality expected, before moving an item of dental equipment onto the next decontamination stage. The practice routinely completed protein residue tests throughout the manual cleaning element of the decontamination process, recorded the manual cleaning cycles and regularly subjected each treatment room to a deep clean. We saw that infection control was a routine agenda item at practice meetings; a platform used by the practice to reflect on procedures and discuss potential change for improvement.

This was deemed notable practice, as it showed a commitment to infection prevention and control and the overall wellbeing of the people who use the service.

The practice carried out infection prevention and control audits twice a year. The latest audit showed the practice was meeting the required standards.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment.

We saw cleaning schedules for the premises. The practice was clean when we inspected and patients confirmed this was usual.

Equipment and medicines

We saw servicing documentation for the equipment used. Staff carried out checks in line with the manufacturers' recommendations.

The practice had suitable systems for prescribing, dispensing and storing medicines.

The practice stored and kept records of NHS prescriptions as described in current guidance.

Radiography (X-rays)

The practice had suitable arrangements to ensure the safety of the X-ray equipment. They met current radiation regulations and had the required information in their radiation protection file.

We saw evidence that the dentists justified, graded and reported on the X-rays they took. The practice carried out X-ray audits every year following current guidance and legislation.

Clinical staff completed continuous professional development in respect of dental radiography.

Are services effective?

(for example, treatment is effective)

Our findings

Monitoring and improving outcomes for patients

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentists assessed patients' treatment needs in line with recognised guidance.

We saw that the practice audited patients' dental care records to check that the dentists recorded the necessary information.

Health promotion & prevention

The practice believed in preventative care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists told us they prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children based on an assessment of the risk of tooth decay for each child.

The dentists told us they discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

The practice supported the use of its oral health educator within the wider community by providing oral health education presentations to local schools using visual aids, posters and models.

Staffing

Staff new to the practice had a period of induction based on a structured induction programme. We confirmed clinical staff completed the continuous professional development required for their registration with the General Dental Council. Staff told us they discussed training needs at annual appraisals and were encouraged and supported to further their career path. We saw evidence of completed appraisals.

Working with other services

Dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide. This included referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist. The practice monitored urgent referrals to make sure they were dealt with promptly.

Consent to care and treatment

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentists told us they gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment and we saw supporting evidence in the patient care records.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to Gillick competence and the dentists and dental nurses were aware of the need to consider this when treating young people under 16. Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

Are services caring?

Our findings

Respect, dignity, compassion and empathy

Staff we spoke with were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were helpful, caring and efficient. We saw that staff treated patients respectfully, appropriately, kindly and were friendly towards patients at the reception desk and over the telephone.

Nervous patients said staff were compassionate and understanding. Patients could choose whether they saw a male or female dentist.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided some privacy when reception staff were dealing with patients. Staff told us that if a patient asked for more privacy they would take them into another room. The reception computer screens were not visible to patients and staff did not leave personal information where other patients might see it. Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

Music was played in the waiting room and there were magazines available. Information leaflets, patient survey results and thank you cards were also available for patients to read.

Involvement in decisions about care and treatment

The practice gave patients clear information to help them make informed choices. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them. A dentist described the conversations they had with patients to satisfy themselves they understood their treatment options; we saw corresponding detail in patient care records.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

The practice provided patients with information about the range of treatments available at the practice on the NHS choices website.

One treatment room had a television screen on the ceiling so the dentist could play videos and routine programs to patients should they be anxious.

Are services responsive to people's needs? (for example, to feedback?)

Our findings

Responding to and meeting patients' needs

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice had an efficient appointment system to respond to patients' needs. Staff told us that patients who requested an urgent appointment were seen the same day. Patients told us they had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

Staff told us that they currently had some patients for whom they needed to make adjustments to enable them to receive treatment. A staff member told us that when a very nervous patient attends the practice staff will make time to sit and talk to the patient in the waiting area whilst they are waiting for their appointment.

Staff told us they routinely e-mailed patients four days ahead of their appointment as a reminder service and would telephone some older patients on the morning of their appointment to make sure they could attend.

Promoting equality

The practice made reasonable adjustments for patients with disabilities. These included step free access with hand rails and a hearing loop. The practice's only toilet facility was on the first floor; staff told us new patients are made aware of this and staff would routinely assist patients up the stairs if requested. They also had access to translation services.

Access to the service

The practice displayed its opening hours in the premises, their information leaflet and on the NHS choices website.

We confirmed the practice kept waiting times and cancellations to a minimum.

The practice was committed to seeing patients experiencing pain on the same day and kept four emergency slots free for same day appointments. The NHS choices website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

Concerns & complaints

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint. The practice manager was responsible for dealing with these. Staff told us they would tell the practice manager about any formal or informal comments or concerns straight away so patients received a quick response.

The practice manager told us they aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received in the last 12 months. These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

Are services well-led?

Our findings

Governance arrangements

The principal dentist had overall responsibility for the management and clinical leadership of the practice. The principal dentist and practice manager were responsible for the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities.

The practice had policies, procedures and risk assessments to support the management of the service and to protect patients and staff. These included arrangements to monitor the quality of the service and make improvements.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

Leadership, openness and transparency

Staff were aware of the duty of candour requirements to be open, honest and to offer an apology to patients if anything went wrong.

Staff told us there was an open, no blame culture at the practice. They said the principal dentist and practice manager encouraged them to raise any issues and felt confident they could do this. They knew who to raise any issues with and told us the principal dentist and practice manager were approachable, would listen to their concerns and act appropriately. The practice manager discussed concerns at staff meetings and it was clear the practice worked as a team and dealt with issues professionally.

The practice held monthly meetings where staff could raise any concerns and discuss clinical and non-clinical updates. Immediate discussions were arranged to share urgent information.

Learning and improvement

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records, X-rays and infection prevention and control. They had clear records of the results of these audits and the resulting action plans and improvements.

The principal dentist showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff. The whole team had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

Staff told us they completed mandatory training, including medical emergencies and basic life support, each year. The General Dental Council requires clinical staff to complete continuous professional development. Staff told us the practice provided support and encouragement for them to do so.

The practice manager told us the infection prevention and control (IPC) lead had been supported to undertake and complete numerous IPC training courses to further enhance the level of IPC within the practice.

Practice seeks and acts on feedback from its patients, the public and staff

The practice used patient surveys, comment cards and verbal comments to obtain staff and patients' views about the service. We saw examples of suggestions from patients that the practice had acted on. For example, some patients requested a water cooler in the waiting room, the practice assessed its limited space to see if this could be accommodated but could not fulfil this request. The practice manager provided feedback to patients using a feedback notice.

Patients were encouraged to complete the NHS Friends and Family Test (FFT). This is a national programme to allow patients to provide feedback on NHS services they have used.
