

Oakfields Health Centre

Quality Report

Hamsterley Colliery, Newcastle-Upon-Tyne, Tyne and Wear, **NE177SB** Tel: 01207 560206 Website: www.oakfieldshealthcentre.co.uk

Date of inspection visit: 15 June 2016 Date of publication: 21/07/2016

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Oakfields Health Centre on 15 June 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were mainly assessed and well managed, however we found that prescriptions were not signed prior to the issue of medication from the dispensary. The practice has since reviewed this process and introduced a system where all prescriptions are reviewed and signed by the GP before dispensing.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.

- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

There were areas of practice where the provider needs to make improvements, the provider should:

The provider should monitor the new process of signing repeat prescriptions before they are issued to patients. This is in order to demonstrate these improvements become embedded into practice in the long term.

Professor Steve Field (CBE FRCP FFPH FRCGP) Chief Inspector of General Practice

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events
- Lessons were shared to make sure action was taken to improve safety in the practice; however we found that staff in the dispensary were not attending regular meetings.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed. However, repeat medication was issued from the dispensary without the prescriptions being signed by the prescriber. This was rectified on the day and a standard operating procedure was implemented by the practice.

Good

Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were at or above average compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for most staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Good

Are services caring?

The practice is rated as good for providing caring services.

• Data from the national GP patient survey showed patients rated the practice higher than others for several aspects of care.

Good

- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified. For example the practice engaged in a frail elderly weekend scheme in conjunction with Derwentside Federation.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings. However we found that dispensary staff had not had a meeting since January.
- The practice had undergone some recent changes in nursing staff and nurse meetings were in the process of being reviewed.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.

Good

Good

- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

Good

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- Patients living in care homes were visited weekly by a GP who worked in collaboration with other health professionals involved in care planning and provision.
- The practice participated in a local scheme which enabled patients who were at risk of unplanned admission to hospital access to a dedicated telephone number at weekends. This was staffed by GPs.

People with long term conditions

Good

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- The percentage of patients with diabetes, on the register, in whom the last HbA1c was 64 mmol/mol or less in the preceding 12 months (01/04/2014 to 31/03/2015) was 86% which was higher than the local average of 81% and the national average of 78%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.
- The practice were in the process of setting up collaboration with health trainers who would come into the practice and provide early intervention and health

promotion advice for patients at risk of developing diabetes. This was part of the improving outcomes scheme with the CCG. Lifestyle coaches employed by the local authority were also invited into the practice to provide advice on dementia awareness, diabetes and healthy lifestyles.

Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The percentage of women aged 25-64 whose notes recorded that a cervical screening test had been performed in the preceding 5 years (01/04/2014 to 31/03/ 2015) was 81% which was comparable to the local average of 83% and the national average of 82%.
- The percentage of women aged 25-64 who attended cervical screening within target period (3.5 or 5.5 year coverage) was 83% which was higher than the local average of 78% and the national average of 74%.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

 The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care. Good

Good

• The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including those with a learning disability; however learning disability reviews had not been undertaken in the past 12 months.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who had a comprehensive, agreed care plan documented in the record, in the preceding 12 months (01/04/2014 to 31/03/2015) was 90% which was comparable to the local average of 90% and the national average of 88%.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.

Good

Good

- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

What people who use the service say

The national GP patient survey results were published on 7 January 2016. The results showed the practice was performing above/in line with local and national averages. 257 survey forms were distributed and 125 were returned. This represented nearly 3% of the practice's patient list.

- 98% of patients found it easy to get through to this practice by phone compared to the national average of 73%.
- 93% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the national average of 76%.
- 97% of patients described the overall experience of this GP practice as good compared to the national average of 85%.

• 98% of patients said they would recommend this GP practice to someone who had just moved to the local area compared to the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 32 comment cards which were all positive about the standard of care received. Some patients commented that appointments sometimes ran late and they were not informed of the delay, however a common theme was that they were given plenty of time in their consultation and therefore did not mind the delay.

We handed out five patient questionnaires during the inspection. All five patients said they were satisfied with the care they received and thought staff were approachable, committed and caring. The most recent Friends and family test results were that 75% of patients would recommend the practice.

Areas for improvement

Action the service SHOULD take to improve

The provider should monitor the new process of signing repeat prescriptions before they are issued to patients. This is in order to demonstrate these improvements become embedded into practice in the long term.

Oakfields Health Centre

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Inspector. The team included a GP specialist adviser, a pharmacist CQC inspector, a practice manager specialist adviser and an Expert by Experience.

Background to Oakfields Health Centre

Oakfields Health Centre is situated in Hamsterley Colliery, Newcastle-upon-Tyne. The practice is part of a larger group (Oakfields Health Group) which has another practice at nearby Dipton. The principal GP owns both practices. They have a Personal Medical Services (PMS) contract and also offer enhanced services for example; extended hours. The practice covers the area of Consett, north west Durham and surrounding areas. The practice is a dispensing practice. Consett is an ex-mining and steelworks community. There are 4270 patients on the practice list and the majority of patients are of white British background. The practice catchment area is classed as 6 out of 10 in the Indices of Multiple Deprivation (IMD) decile the more deprived an area is).

Oakfields Health Centre is a modern purpose built practice and has good transport links and car parking facilities. There is a principal GP (male), two salaried GPs (both female), an advanced care practitioner (female), a practice nurse (female), a specialist practitioner (female), a health care assistant (female), a business manager, an office manager, a dispensary manager, three dispensers, a range of secretary and administrative staff and a housekeeper.

Some of the staff also work at the other location in the group. The practice has been a teaching and training practice in the past but due to staff changes is not currently adopting this role.

The practice is open between 8.30am and 6pm on Mondays, Tuesdays, Wednesdays and Fridays and 8.30am to 12.30pm on a Thursday. Patients requiring care on a Thursday afternoon are able to attend the other location at Dipton. Appointments are from 8.30am daily. Extended hours appointments are offered on Wednesdays between 6pm and 8.15pm. Patients requiring a GP outside of normal working hours are advised to contact the GP out of hours service (111) provided by County Durham and Darlington Foundation Trust (Commissioned by North Durham Clinical Commissioning Group (CCG).

Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 15 June 2016. During our visit we:

Detailed findings

- Spoke with a range of staff (including GPs, nurses, management, administrative, reception and dispensary staff) and spoke with patients who used the service.
- Observed how patients were being cared for.
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, the process for dealing with safeguarding information in patients' records was improved following an incident with recording of information.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

 Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their

- responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained to child protection or child safeguarding level 3.
- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse and the business manager shared the role of the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency drugs and vaccinations, in the practice kept patients safe.
- The practice had standard operating procedures (these are written instructions about how to safely dispense medicines) that were readily accessible and covered all aspects of the dispensing process.
- Processes were in place to check medicines were within their expiry date and suitable for use. All medicines we checked were within their expiry dates. Expired and unwanted medicines were disposed of in line with waste regulations.
- The practice held stocks of controlled drugs (medicines that require extra checks and special storage arrangements because of their potential for misuse) and had in place standard procedures that set out how they were managed. These were being followed by practice staff. For example controlled drugs were stored in a controlled drugs cupboard and access to them was restricted. Balance checks of controlled drugs were carried out regularly and there were appropriate arrangements in place for their destruction.
- The practice was signed up to the Dispensing Services Quality Scheme which rewards practices for providing

Are services safe?

high quality services to patients of their dispensary and there was a named lead GP for Medicines Management. We were shown the incident/near miss record (a record of dispensing errors that have been identified before medicines have left the dispensary). We were shown some examples of how errors had been looked at and changes made. There was a process in place to review errors at the dispensary monthly meeting; however we were told by staff that there had been no meeting since January 2016.

- Dispensing staff at the practice were aware prescriptions should be signed. However at the time of our visit there was no system in place to ensure that GPs checked and signed repeat prescriptions before the medicines were dispensed and issued to patients. Overall this meant that patients did not receive medicines safely because GPs did not have the opportunity to do a clinical check before they were dispensed. The practice has since reviewed this process and introduced a system where all prescriptions are reviewed and signed by the GP before dispensing. The provider should monitor the new process of signing repeat prescriptions before they are issued to patients. This is in order to demonstrate these improvements become embedded into practice in the long term.
- We checked medicines stored in the treatment rooms and medicines refrigerators and found the majority were stored securely and were only accessible to authorised staff however we did discuss the safe storage of some medicines with the Practice Manager on the day of our visit. There was a clear policy for ensuring medicines were stored at the required temperatures and this was being followed by practice staff.
- Prescription pads were stored securely and there were systems in place to monitor their use. Patient group directions had been adopted by the practice to allow nurses to administer medicines in line with legislation.
- We reviewed four personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).
- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 100% of the total number of points available with an exception reporting rate of 9% which was comparable with both local and national figures. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/2015 showed:

- Performance for diabetes related indicators was similar
 to the local and national averages. The percentage of
 patients with diabetes who had had influenza
 immunisation in the preceding 12 months (01/04/2014
 to 31/03/2015) was 97% compared to the local average
 of 96% and the national average of 94%.
- The percentage of patients with diabetes whose last measured total cholesterol (measured within the preceding 12 months) was 5 mmol/l or less was 80% which was similar to the national average of 81%.
- Performance for mental health related indicators was similar to the national average. The percentage of patients with schizophrenia, bipolar affective disorder

- and other psychoses who had a comprehensive, agreed care plan documented in the record, in the preceding 12 months (01/04/2014 to 31/03/2015) was 90% compared to the national average of 88%.
- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses whose alcohol consumption had been recorded in the preceding 12 months (01/04/2014 to 31/03/2015) was 91% which was comparable to the national average of 90%.

There was evidence of quality improvement including clinical audit.

- There had been several clinical audits completed in the last two years, one of these was a completed audit where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation and peer review.
- Findings were used by the practice to improve services. For example, recent action taken as a result included the identification of women with an intra uterine system (mirena coil) who may be at risk due to exceeding their review date. These patients were called into the practice to be reviewed.

Information about patients' outcomes was used to make improvements such as: further training and raising awareness in both staff and patients was undertaken to raise the bowel screening uptake in patients at the practice. This had been identified as an area that needed improvement.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, those reviewing patients with long-term conditions had completed diplomas in the conditions that they reviewed.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could

Are services effective?

(for example, treatment is effective)

demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.

- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. Most staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, and basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.
- When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation.
 Patients were signposted to the relevant service.
- A dietician, counsellor, podiatrist and smoking cessation advice was available on the premises.

The practice's uptake for the cervical screening programme was 83%, which was higher than the CCG average of 78% and the national average of 74%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 96% to 98% and five year olds from 92% to 96%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 32 patient Care Quality Commission comment cards we received were positive about the service experienced, two had mixed responses. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We distributed questionnaires to patients and received five responses. Overall these were positive about the service provided.

We spoke with seven members of the patient participation group (PPG). Almost the whole group felt the care provided by the practice was good and that their dignity and privacy was respected. They stated that they felt the service was safe and caring and that they were given options and choices in their care. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was in line/above average for its satisfaction scores on consultations with GPs and nurses. For example:

- 94% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 92% and the national average of 89%.
- 90% of patients said the GP gave them enough time compared to the CCG average of 90% and the national average of 87%.

- 99% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 97% and the national average of 95%.
- 97% of patients said the last GP they spoke to was good at treating them with care and concern compared to the national average of 85%.
- 97% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the national average of 91%.
- 90% of patients said they found the receptionists at the practice helpful compared to the CCG average of 88% and the national average of 87%.

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line and above local and national averages. For example:

- 91% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 89% and the national average of 86%.
- 88% of patients said the last GP they saw was good at involving them in decisions about their care compared to the national average of 82%.
- 91% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translation services were available for patients who did not have English as a first language.
 We saw notices in the reception areas informing patients this service was available.
- Information leaflets were available in easy read format.

Are services caring?

Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 85 patients as carers (2% of the practice list). Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs or by giving them advice on how to find a support service. The practice also facilitated sessions from the local bereavement support group at Dipton Surgery.

We were told that the practice also sent new birth cards to their patients.

We were told that the practice encouraged the uptake of flu vaccinations during annual Macmillan coffee mornings hosted in the surgery.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. For example the practice participated in a frail and elderly scheme as part of the improving outcomes scheme with the CCG. This provided GP access at weekends for patients who were identified as being at risk of hospital admission.

- The practice offered a 'Commuter's Clinic' on Wednesday evenings until 8.15pm for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccinations available on the NHS and patients were referred to other clinics for vaccines available privately.
- The practice had set up a warfarin monitoring clinic and patients from other practices in the area were able to attend, this provided care closer to home.
- There were disabled facilities, a hearing loop and translation services available.

Access to the service

The practice was open on Mondays, Tuesdays, and Wednesdays and Fridays between 8.30am and 6pm, Thursdays from 8.30am to 12.30pm. Patients requiring care on a Thursday afternoon were able to access the other practice in the group at Dipton Surgery. Extended hours appointments were offered on Wednesdays until 8.15pm. In addition to pre-bookable appointments that could be booked up to six weeks in advance, urgent appointments were also available for people that needed them.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was higher than local and national averages.

- 90% of patients were satisfied with the practice's opening hours compared to the national average of 78%.
- 98% of patients said they could get through easily to the practice by phone compared to the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

In some circumstances the GP would telephone the patient or carer in advance to gather information to allow for an informed decision to be made on prioritisation according to clinical need. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system, this included posters in the reception area and leaflets.

We looked at seven complaints received in the last 12 months and found these were satisfactorily handled, dealt with in a timely way and with openness and transparency. Lessons were learnt from individual concerns and complaints and also from analysis of trends and action was taken to as a result to improve the quality of care. For example, further training in the co-ordination of repeat medications was undertaken following a complaint about repeat medication.

Are services well-led?

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

Leadership and culture

On the day of inspection the GPs and management in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the GPs and management were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included support and training for all staff on communicating with

patients about notifiable safety incidents. The GPs and management encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings, although none of these were whole team meetings.
- Nurses were supported to attend bi-monthly meetings and clinical supervision with nurses from other practices in the area.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so.
- Staff said they felt respected, valued and supported, particularly by the GPs and management in the practice.
 All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

The practice had gathered feedback from patients
through the patient participation group (PPG) and
through surveys and complaints received. The PPG met
regularly, carried out patient surveys and submitted
proposals for improvements to the practice
management team. For example, a banner had been
produced for the reception area to educate patients
about 'one problem, one appointment' in response to
waiting time complaints and a quarterly newsletter
introduced in order to raise patient awareness of
different ways to access care (for example minor injuries
and out of hours).

Are services well-led?

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

 The practice had gathered feedback from staff through staff meetings, appraisals and discussion. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. For example appointment duration times in the baby clinic had been increased following feedback from the nursing team about a more complex regime of immunisations. Staff told us they felt involved and engaged to improve how the practice was run.

Continuous improvement

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area. The practice were in the process of setting up a service for pre-diabetic patients in order to provide early intervention and prevention of disease progression.
