

## Rowan Tree Surgery

### **Quality Report**

Rowan Tree Road Tunbridge Wells Kent TN2 5PX Tel: 01892 573108 Website: www.rowantreesurgery.co.uk

Date of inspection visit: 28 June 2016 Date of publication: 18/08/2016

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

#### Ratings

Overall rating for this service	Good	
Are services safe?	Good	
Are services effective?	Good	
Are services caring?	Good	
Are services responsive to people's needs?	Good	
Are services well-led?	Good

### **Overall summary**

#### Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Rowan Tree Surgery on 28 June 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.

- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

**Professor Steve Field (CBE FRCP FFPH FRCGP)** Chief Inspector of General Practice

### The five questions we ask and what we found

We always ask the following five questions of services.

#### Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system for reporting and recording significant events.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

#### Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were comparable to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

#### Are services caring?

The practice is rated as good for providing caring services.

- Data from the national GP patient survey showed patients rated the practice in line with others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

Good

#### Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

#### Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- Staff felt involved and engaged to improve how the practice was run. There was a very low staff turnover at the practice. Staff felt included and integral in the running of the practice.
- There was a strong focus on continuous learning and improvement at all levels.

Good

### The six population groups and what we found

We always inspect the quality of care for these six population groups.

#### **Older people**

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- The practice worked closely with other health and social care professionals, such as the district nursing and local neighbourhood teams, to ensure housebound patients received the care and support they needed.
- It had a scheme for patients who lived in one of two nursing homes, consultations were available when needed.

#### People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Performance for diabetes related indicators were comparable to the local and national average. For example, 70% of patients with diabetes, on the register, in whom the last IFCCHbA1c is 64 mmol/mol (a blood test to check blood sugar levels) or less in the preceding 12 months (local average 79% and national average 77%).
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

#### Families, children and young people

The practice is rated as good for the care of families, children and young people.

Good

Good

- There were systems to identify and follow up children living in disadvantaged circumstances and who were at risk. For example, children and young people who had a high number of A&E attendances. Immunisation rates were comparable for all standard childhood immunisations.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The practice's uptake for the cervical screening programme was 83%, which was comparable to the national average.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

### Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

#### People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

### People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- Performance for mental health related indicators were similar to the national average. For example, 90% of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive, agreed care plan documented in the record, in the preceding 12 months (local average 88%) and national average 88%).
- Performance for dementia related indicators were comparable to the local and national average. For example, 80% of patients diagnosed with dementia whose care had been reviewed in a face-to-face review in the preceding 12 months (local average 85% and national average 84%).
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

#### What people who use the service say

The national GP patient survey results were published in January 2016. The results showed the practice was performing in line with local and national averages. Three hundred and sixty nine survey forms were distributed and 128 were returned. This represented 4% of the practice's patient list.

- 94% of patients found it easy to get through to this practice by phone compared to the local average of 74% and the national average of 73%.
- 89% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the local average of 89% and the national average of 85%.
- 84% of patients described the overall experience of this GP practice as good compared to the local average of 87% and the national average of 85%.

• 78% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the local average of 82% and the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 18 comment cards which were all positive about the standard of care received. Patients said that staff at the practice were professional, welcoming and very caring. Patients said that receptionists were polite and that clinical staff listened to their concerns.

We spoke with 11 patients during the inspection. All 11 patients said they were satisfied with the care they received and thought staff were approachable, committed and caring.

# Rowan Tree Surgery Detailed findings

### Our inspection team

#### Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser and a practice manager specialist adviser.

### Background to Rowan Tree Surgery

Rowan Tree Surgery is based in Tunbridge Wells, Kent. There are approximately 3,816 patients on the practice list.

The practice is in one of the least deprived areas of Kent. However, the practice told us they are situated on an estate where there are levels of deprivation, related to unemployment. The practice is similar to the national averages for each population group. For example, 6.5% of patients are aged 0 - 4 years of age compared to the clinical commissioning group (CCG) average of 6% and the national average of 5.9% and 36% are 5 to 18 years of age compared to the CCG average of 34% and the national average of 32.1%. Scores were similar for patients aged 65, 75 and 85 years and over.

The practice holds a General Medical Service contract and is led by two GP partners (one male and one female). The GPs are supported by two salaried GPs (female), a locum advanced nurse practitioner, two practice nurses (female) and a healthcare assistant (female), a practice manager and a team of administration and reception staff. A range of services and clinics are offered by the practice including asthma and diabetes. The practice is open from 8.00am to 1:00pm and 2.00pm to 6.30pm Monday to Friday. There is an early evening clinic every Tuesday from 6.30pm to 8.00pm. There was access to a GP when the practice was closed during lunchtime closures.

An out of hour's service is provided by Integrated Care 24 (known as IC24), outside of the practices open hours. There is information available to patients on how to access this at the practice, in the practice information leaflet and on the website.

Services are delivered from;

• Rowan Tree Surgery, Rowan Tree Road, Tunbridge Wells, Kent, TN2 5PX.

## Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

## How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 28 June 2016.

During our visit we:

### **Detailed findings**

- Spoke with a range of staff (two GP partners, a locum GP, the practice manager, the practice nurse and five administrative staff) and spoke with 11 patients who used the service.
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.'

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

### Are services safe?

### Our findings

#### Safe track record and learning

There was an effective system for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.
- We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, the practice had given a patient an incorrect telephone number for another NHS service. As a result of this incident, the practice implemented the use of the electronic address book function in Docman (a computer software programme), which provides a search facility to look up other service providers telephone numbers. The practice found the address book needed to be kept up to date with any changes they received and were routinely reviewing the address book, in order to add additional services.

#### **Overview of safety systems and processes**

The practice had clearly defined and embedded systems, processes and practices to keep patients safe and safeguarded from abuse, which included:

• Arrangements to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained in child safeguarding level 3.

- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal).
  Processes were for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local clinical commissioning group (CCG) pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored and there were systems to monitor their use. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation.
- We reviewed five personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

#### **Monitoring risks to patients**

Risks to patients were assessed and well managed.

### Are services safe?

- There were procedures for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).
- There were arrangements for the planning and monitoring of the number of staff and mix of staff, needed to meet patients' needs.

### Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.

The practice had a comprehensive business continuity plan for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

### Are services effective?

(for example, treatment is effective)

### Our findings

#### **Effective needs assessment**

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

### Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 97% of the total number of points available with 10% exception reporting. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/15 showed:

- Performance for diabetes related indicators were comparable to the local and national average. For example, 70% of patients with diabetes, on the register, in whom the last IFCCHbA1c is 64 mmol/mol (a blood test to check blood sugar levels) or less in the preceding 12 months (local average 79% and national average 77%).
- Performance for mental health related indicators were similar to the national average. For example, 90% of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive, agreed care plan documented in the record, in the preceding 12 months (local average 88% and national average 88%).

• Performance for dementia related indicators were comparable to the local and national average. For example, 80% of patients diagnosed with dementia whose care had been reviewed in a face-to-face review in the preceding 12 months (local average 85% and national average 84%).

There was evidence of quality improvement including clinical audit.

- There had been three clinical audits completed in the last two years, two of these were completed audits where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result included reviewing patients prescribed new oral anticoagulants (NOAC – used to thin patients blood and reduce the risk of clots forming) medicines and ensuring all appropriate tests were routinely conducted and recorded for patients taking this type of medicine.

Information about patients' outcomes was used to make improvements For example, routinely reviewing patients on a certain medicine which had adverse cardiac (heart) side effects.

#### **Effective staffing**

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety awareness, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, diabetes, asthma, travel vaccines, coronary heart disease, chronic obstructive pulmonary disease (a long-term respiratory disease) and updates in childhood immunisations.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence.Staff who administered vaccines could

### Are services effective?

### (for example, treatment is effective)

demonstrate how they stayed up to date with changes to the immunisation programmes. For example, by access to on line resources and discussion at practice meetings.

- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, mentoring, clinical supervision and facilitation and support for revalidating GPs . All staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

#### Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

#### **Consent to care and treatment**

Staff sought patients' consent to care and treatment in line with legislation and guidance.

• Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.

- When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

#### Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, alcohol cessation and healthy living. Patients were signposted to the relevant service.
- Smoking cessation advice was available from a local support group.

The practice's uptake for the cervical screening programme was 81%, which was comparable to the CCG average of 83% and the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability. There were systems to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening. For example, 54% of eligible patients had been screened for bowel cancer, which was comparable to the CCG average of 58% and the national average of 55%. The practice achieved similar results in relation to its patients attending national screening programmes for breast cancer screening. For example, 73% percent of eligible patients had been screened for breast cancer, compared to the CCG average of 73% and the national average of 72%.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example,

### Are services effective? (for example, treatment is effective)

childhood immunisation rates for the vaccinations given to under two year olds ranged from 76% to 98% (CCG average 68% to 91%). Rates for five year olds ranged from 80% to 93% (CCG average 81% to 94%).

Patients had access to appropriate health assessments and checks. These included health checks for new patients and

NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

### Are services caring?

### Our findings

#### Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 18 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We spoke with seven members of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was comparable for its satisfaction scores on consultations with GPs and nurses. For example:

- 86% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 90% and the national average of 86%.
- 83% of patients said the GP gave them enough time compared to the CCG average of 89% and the national average of 86%.
- 93% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 96% and the national average of 95%.

• 82% of patients said the last GP they spoke to was good at treating them with care and concern compared to the CCG average of 78% and the national average of 85%.

When asked the same question about nursing staff the results were:

- 92% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the CCG average of 87% and the national average of 90%.
- 92% of patients said the last nurse they saw gave them enough time compared to the CCG average of 90% and the national average of 91%.
- 95% of patients said they had confidence and trust in the last nurse they saw compared to the CCG average of 98% and the national average of 97%.

The practice was comparable to the local and national averages for the helpfulness of reception staff:

• 91% of patients said they found the receptionists at the practice helpful compared to the CCG average of 89% and the national average of 86%.

### Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 85% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 88% and the national average of 86%.
- 83% of patients said the last GP they saw was good at involving them in decisions about their care compared to the CCG average of 84% and the national average of 81%.

### Are services caring?

• 89% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the CCG average of 86% and the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.
- Information leaflets were available in easy read format.

### Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 58 patients as

carers (1.8% of the practice list). The register of carers maintained by the practice was routinely reviewed and revised where appropriate. Written information was available to direct carers to the various avenues of support available to them. Additionally, the patient participation group had held a health workshop in the local library, which focussed on carers and providing them with guidance on the benefits available to them and how the practice could support them.

Staff told us that if families had suffered bereavement, their usual GP contacted them. This call was either followed by a consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service. To further support bereaved relatives the practice had taken steps to change processes for issuing death certificates to be collected from the practice. This came about in response to a complaint being raised by a relative that the information on the official envelope was distressing. As a result of this processes had been changed to ensure they place the official envelope in a plain envelope.

### Are services responsive to people's needs?

(for example, to feedback?)

### Our findings

#### Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified.

- The practice offered an early evening clinic every Tuesday evening until 8.00pm for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately.
- There were disabled facilities and translation services available.

#### Access to the service

The practice was open between 8.00am to 1.00pm and 2.00pm to 6.30pm Monday to Friday. Extended hours appointments were offered from 6.30 pm to 8.00pm on Tuesday. In addition, there were appointments that could be booked up to six weeks in advance, as well as urgent appointments available for people that needed them. Patients could also sign up to receive text reminders of dates and times of appointments.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to local and national averages.

- 77% of patients were satisfied with the practice's opening hours compared to the CCG average of 77% and the national average of 78%.
- 93% of patients said they could get through easily to the practice by phone compared to the CCG average of 75% and the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them and they found the text reminder system very useful, in order to help ensure they did not fail to attend an appointment.

The practice had a system to assess:

- Whether a home visit was clinically necessary; and
- The urgency of the need for medical attention. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

#### Listening and learning from concerns and complaints

The practice had an effective system for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system in the practice and on the practices website.

We looked at eight complaints received in the last 12 months and found that they had been dealt with in a timely, open and transparent way. Records demonstrated that complaints were investigated, the complainants had received a response, the practice had learned from the complaint and had implemented appropriate changes. Lessons were learnt from individual concerns and complaints and also from analysis of trends and action was taken to as a result to improve the quality of care. For example, improving processes and response times for attending the death of a patient in a care home setting. Documentary evidence showed that all changes made were discussed with the staff team before, during and after process changes were being implemented.

### Are services well-led?

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

### Our findings

#### Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

#### **Governance arrangements**

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

#### Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).This included support training for all staff on communicating with patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure and staff felt supported by management.

- There were high levels of staff satisfaction. Staff were proud of the practice as a place to work and spoke highly of the culture. There were consistently high levels of constructive staff engagement.
- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice.
- Staff we spoke with told us they felt involved and engaged to improve how the practice was run. There was a very low staff turnover at the practice. Staff told us they came to the practice and have stayed because they felt included and integral in the running of

the practice.

• All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

### Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It sought patients' feedback and engaged patients in the delivery of the service.

• The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The PPG was made up of a combination of a group of patients, as well

### Are services well-led?

### (for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

as virtual group members. They met regularly, carried out patient surveys and submitted proposals for improvements to the practice management team. For example, in response to a PPG request the practice had implemented the text reminder service. The PPG had also established walking clubs and had been supported by the practice to provide private podiatrist services for both patients of the practice and those from neighbouring practices, at a significantly reduced cost.

• The practice had gathered feedback from staff through staff meetings, appraisals and discussions. Staff told us

they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

#### **Continuous improvement**

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area.
