#### Overall summary

## Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at The Falcon Road Medical Centre on 28 July 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.

- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on
- The provider was aware of and complied with the requirements of the duty of candour.

We saw one area of outstanding practice:

 We found that the practice vision and values were embedded in the organisations culture and prioritised good quality patient care. The practice had a mission statement with a clear vision and set of values for the practice. This had been developed with all staff, who had shown their support and commitment to the values by signing a copy on display in the staff break area. The mission statement and vision and values were also clearly

displayed on the practice website, in the reception area, and throughout the practice including on documents, information leaflets and posters produced by the practice.

The areas where the provider should make improvement are:

 Review how patients with caring responsibilities are identified and recorded on the clinical system to ensure information, advice and support is made available to them.

#### **Professor Steve Field CBE FRCP FFPH FRCGP**

Chief Inspector of General Practice

#### The five questions we ask and what we found

We always ask the following five questions of services.

#### Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

#### Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were at or above average compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

#### Are services caring?

The practice is rated as good for providing caring services.

- Data from the national GP patient survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

#### Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

#### Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care.
   This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active
- There was a strong focus on continuous learning and improvement at all levels.

#### The six population groups and what we found

We always inspect the quality of care for these six population groups.

#### Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- All older people had a named GP responsible for their care.

#### People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Performance for diabetes related indicators was comparable to the local and national average.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

#### Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The practice's uptake for the cervical screening programme was 78%, which was comparable to the CCG average of 81% and the national average of 82%.

Good

Good

- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives and health visitors.

#### Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

#### People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability, a named GP and reception staff member available through a designated phoneline and conducted consultations using appropriate language and information for this group including easy read information leaflets.
- The practice demonstrated that over time their engagement with patients with learning difficulties had led to improvements for several health indicators for example, an increase in the number of patients receiving breast and cervical screening, an increase in the number of patients with normal blood pressure
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

## People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- Performance for mental health related indicators was comparable to the local and national averages.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

#### What people who use the service say

The national GP patient survey results were published July 2016. The results showed the practice was performing in line with national averages. Three hundred and fifty nine survey forms were distributed and one hundred and two were returned. This represented 1% of the practice's patient list.

- 87% of patients found it easy to get through to this practice by phone compared to the national average of 73%.
- 74% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the national average of 76%.
- 92% of patients described the overall experience of this GP practice as good compared to the national average of 85%.

• 88% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 41 comment cards which were all positive about the standard of care received. Patients described the service provided as caring, friendly and professional, with specific staff mentioned by name for their contribution to this.

We spoke with ten patients during the inspection. All ten patients said they were satisfied with the care they received and thought staff were approachable, committed and caring. The practice actively encouraged patients to complete their friends and family test and showed us that 90% of patients would recommend the practice to a friend or family member.

# The Falcon Road Medical Centre

**Detailed findings** 

## Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser, a practice manager specialist adviser and an Expert by Experience.

## Background to The Falcon Road Medical Centre

Falcon Road Medical Centre provides primary medical services in Wandsworth to approximately 9050 patients and is one of 44 member practices in the NHS Wandsworth Clinical Commissioning Group (CCG). The practice operates under a Personal Medical Services (PMS) contract and provides a number of local and national enhanced services (enhanced services require an increased level of service provision above that which is normally required under the core GP contract).

Wandsworth has 50% more 20 to 40 year olds, but 33% fewer older people than other south west London boroughs, reflected in the patient demographics for the practice with 9% of patients aged 65 or over, 71% of patients aged 18-65 years old and 20% aged 18 or younger.

The practice population is in the fourth more deprived decile with income deprivation affecting children and adults higher than national averages.

The practice operates from the ground floor of a purpose built property with eight consultation rooms, three

treatment rooms, a patient reception and waiting area and administrative facilities. The practice is wheelchair accessible throughout, with disabled access facilities, a breast feeding room, and babychange facilities.

The practice clinical team is made up of six GP partners and two salaried GPs, four GPs are male and four are female, providing 44 GP sessions per week. The GPs are supported by a part time physicians assistant. There are two female part time practice nurses and one female healthcare assistant. The practice is a training and a teaching practice for GP registrars and student doctors. The non-clinical team consists of one practice manager, nine reception staff and two administrative staff.

The practice opens between 8.30am and 6.30pm Monday to Friday. Telephone lines are operational between the hours of 8.30am and 6.30pm Monday to Friday.

Appointments are available between 8.30am and 12.30am and between 1.30pm and 6.30pm Monday to Friday.

Extended hours are available Monday to Thursday from 6.30pm until 7.00pm for pre booked appointments.

Saturday morning pre booked appointments are available between 9.00am and 12.00pm once or twice a month depending on availability of staff and demand from patients.

The provider has opted out of providing out-of-hours (OOH) services to their own patients between 6.30pm and 8.30am when the practice directs patients to seek assistance from the locally agreed out of hours provider.

The practice is registered with the Care Quality Commission (CQC) to provide the regulated activities of maternity and midwifery services, treatment of disease, disorder or injury, family planning, surgical procedures and Diagnostic and screening procedures.

## **Detailed findings**

The practice has not previously been inspected by CQC.

## Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

## How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 8 October 2015. During our visit we:

- Spoke with a range of staff including GPs, nurses, the practice manager, receptionists and administrative staff.
- Spoke with patients who used the service.
- Observed how patients were being cared for and talked with carers and family members.
- Reviewed an anonymised sample of the personal care or treatment records of patients.

 Reviewed comment cards where patients and members of the public shared their views and experiences of the service

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

#### Are services safe?

## **Our findings**

#### Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available in reception. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, the practice received an email from what was thought to be a trusted source, however when a link was opened, part of the practice computer system was encrypted by malicious software. The issue was resolved by a computer engineer and no patient information was lost. The practice reviewed the incident, sharing the review with all staff including actions to prevent the same thing happening again and to minimise the impact of similar events. Measures included having new software installed, ensuring all staff had received up to date information governance training, and ensuring that a person was responsible for making back up copies of practice data on a daily, instead of monthly, basis.

#### Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

• Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements

- reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained to child protection or child safeguarding level 3, Nurses were trained to level 3 or level 2 and non-clinical staff were trained to level 1.
- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result. For example, the practice had changed the plastic boxes used to store vaccines in fridges with plastic baskets which allowed better airflow and therefore vaccines were more likely to be kept at a suitable temperature.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored and there were systems in place to monitor their use. One of

## Are services safe?

the nurses had qualified as an Independent Prescriber and could therefore prescribe medicines for specific clinical conditions. They received mentorship and support from the medical staff for this extended role. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. Health Care Assistants were trained to administer vaccines and medicines against a patient specific prescription or direction from a prescriber. (PGDs are written instructions for the supply or administration of medicines to groups of patients who may not be individually identified before presentation for treatment. PSDs are written instructions from a qualified and registered prescriber for a medicine including the dose, route and frequency or appliance to be supplied or administered to a named patient after the prescriber has assessed the patient on an individual basis).

 We reviewed four personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

#### Monitoring risks to patients

Risks to patients were assessed and well managed.

• There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of

- substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).
- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty.

## Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency. The practice had under desk emergency alarm points and an intercom system via the practice phones which were used in emergency situations to alert staff and obtain help.
- All staff received annual basic life support training and there were emergency medicines and equipment available in the Nurses room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available in reception.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.
- The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

#### Are services effective?

(for example, treatment is effective)

## **Our findings**

#### **Effective needs assessment**

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

## Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 97% of the total number of points available, with an exception reporting rate of 6%. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/2015 showed:

Performance for diabetes related indicators was comparable to the local and national average. For example:

- The percentage of patients on the diabetes register, in whom the last IFCC-HbA1c (a specific blood glucose level test) is 64 mmol/mol or less in the preceding 12 months was 67%, compared to the local clinical commissioning group (CCG) average of 75% and the national average of 78%.
- The percentage of patients on the diabetes register, in whom the last blood pressure reading (measured in the preceding 12 months) is 140/80 mmHg or less was 80% (CCG 75%, national 78%).

- The percentage of patients on the diabetes register, who have had influenza immunisation in the preceding 1 August to 31 March was 91% (CCG 92%, national 94%).
- The percentage of patients with diabetes, on the register, whose last measured total cholesterol (measured within the preceding 12 months) is 5 mmol/l or less was 81% (CCG 78%, national 81%).
- The percentage of patients on the diabetes register, with a record of a foot examination and risk classification within the preceding 12 months was 90% (CCG 88%, national 88%).

Performance for mental health related indicators was comparable to the local and national averages. For example:

- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive, agreed care plan documented in the record, in the preceding 12 months was 93% compared to the CCG average of 91% and the national average of 88%.
- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses whose alcohol consumption has been recorded in the preceding 12 months was 94% (CCG 89%, national 90%).
- The percentage of patients diagnosed with dementia whose care has been reviewed in a face-to-face review in the preceding 12 months was 94% (CCG 87%, national 84%).

There was evidence of quality improvement including clinical audit. We saw examples of four clinical audits carried out in the last two years, three of these were completed audits where the improvements made were implemented and monitored. Findings were used by the practice to improve services. For example:

The practice carried out an audit to review all patients with a diagnosis or history of atrial fibrillation (AF, a heart condition) to ensure that they were receiving appropriate treatment in accordance with local and national guidelines. Data collected was intended to show if patients had CHA2DS2-VASc scores and HAS-BLED scores (used in the management of AF) documented, and the numbers of patients with documented reasons for not being prescribed anticoagulation medicine (used to treat AF) or referred

#### Are services effective?

(for example, treatment is effective)

to anticoagulation services. The first audit cycle showed that of 28 patients identified, 63% had their CHA2DS2-VASc scores documented and 0% had their HAS-BLED scores documented and that 82% of patients did not have reasons documented for not being prescribed anticoagulation medicine or referred to anticoagulation services. The practice discussed the results and put in place actions to bring the results in line with guidelines. Actions included documenting risk scores for each patient in their notes, providing face to face discussions with patients about their risks associated with AF and anticoagulation medicine, and to ensure that if patients cannot be referred to anticoagulation services or prescribed the appropriate medicine that this was fully documented. In the second audit cycle, 100% of patients had both their CHA2DS2-VASc scores and HAS-BLED risk scores documented and 3% of patients did not have reasons documented in their notes for not being prescribed anticoagulation medicine or referred to appropriate services.

Information about patients' outcomes was used to make improvements. For example:

 A patient at the practice developed a condition after being prescribed an antipsychotic medicine. The condition was diagnosed after blood tests were carried out before the patient started taking the medicine and then two weeks later. The practice discussed the case at a clinical meeting and decided to carry out an audit to ensure that other patients taking antipsychotic medicine had their blood tested at regular intervals in line with guidelines, so that any potentially dangerous side effects could be identified, monitored and treated. In the first audit cycle, the practice found that of 81 patients, 36% had the appropriate blood tests taken at the appropriate intervals. The practice put in place a monitoring programme which included calling in any patient who hadn't had the appropriate tests carried out, annual patient reviews and opportunistic reviews for example if patients were attending the practice for a repeat prescription review. The second audit cycle showed that 68% of patients were being monitored in line with guidelines. The results were shared with relevant staff and the audit was planned to continue to improve further and expand to cover other health checks as well as blood tests.

#### **Effective staffing**

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, four staff had attained a diploma in the management of diabetes patients in a primary care setting, and other staff had been trained in spirometry used for reviewing and diagnosing respiratory conditions such as asthma and chronic obstructive pulmonary disease.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

#### **Coordinating patient care and information sharing**

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

 This included care and risk assessments, care plans, medical records and investigation and test results.

#### Are services effective?

#### (for example, treatment is effective)

 The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

#### **Consent to care and treatment**

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.
   When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

#### Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation.
   Patients were signposted to the relevant service.
- Smoking cessation and diet and lifestyle advice was available on site with further support from local services.

The practice's uptake for the cervical screening programme was 78%, which was comparable to the CCG average of 81% and the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available.. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening.

Childhood immunisation rates for the vaccinations given were comparable to CCG and national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 17% to 93% (CCG 5% to 93%, national 73% to 95%) and five year olds from 73% to 95% (CCG 67% to 93%, national 81% to 95%).

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

## Are services caring?

## **Our findings**

#### Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 41 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We spoke with three members of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was comparable with other practices locally and nationally for its satisfaction scores on consultations with GPs and nurses. For example:

- 91% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 90% and the national average of 89%.
- 91% of patients said the GP gave them enough time compared to the CCG average of 87% and the national average of 87%.
- 95% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 96% and the national average of 95%.

- 85% of patients said the last GP they spoke to was good at treating them with care and concern compared to the national average of 85%.
- 95% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the national average of 91%.
- 90% of patients said they found the receptionists at the practice helpful compared to the CCG average of 87% and the national average of 87%.

## Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 86% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 86% and the national average of 86%.
- 74% of patients said the last GP they saw was good at involving them in decisions about their care compared to the national average of 82%.
- 85% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

 Staff told us that translation services were available for patients who did not have English as a first language.
 We saw notices in the reception areas informing patients this service was available. Staff also told us that they would use their own language skills to speak to patients at reception as most reception staff spoke more than one language.

## Are services caring?

• Information leaflets were available in easy read format and in other languages.

## Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 60 patients as

carers (0.6% of the practice list). Carers were offered extended appointments and an annual health review which had high uptake. Written information was available to direct carers to the various avenues of support available to them via a carers notice board in reception.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

## Are services responsive to people's needs?

(for example, to feedback?)

## **Our findings**

#### Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. For example, the practice offered on site phlebotomy, physiotherapy and chiropody services.

- The practice offered a 'Commuter's Clinic' on a Monday to Thursday from 6.30pm until 7.00pm for working patients who could not attend during normal opening hours. Saturday morning appointments were available between 9.00am and 12.00pm once or twice a month depending on availability of staff and demand from patients.
- The practice provided longer appointments for patients with a learning disability automatically, a named GP and reception staff member were available through a designated telephone line and conducted consultations using appropriate language and information for this group. Patients were introduced to the practice by letter in 'easy read' English with photographs and pictures of staff and the practice to help people understand the practice and the services on offer.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately.
- There were disabled facilities, a hearing loop and translation services available.

#### Access to the service

The practice was open between 8.00am and 6.30pm Monday to Friday. Appointments were available during two daily sessions, one in the morning and one in the afternoon. Extended hours appointments were offered on a Monday to Thursday from 6.30pm until 7.00pm and every

Saturday. In addition to pre-bookable appointments that could be booked up to six weeks in advance, urgent appointments were also available for people that needed them.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to national averages.

- 84% of patients were satisfied with the practice's opening hours compared to the national average of 79%.
- 87% of patients said they could get through easily to the practice by phone compared to the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- · whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

The on duty GP would telephone the patient or carer in advance to gather information to allow for an informed decision to be made on prioritisation according to clinical need. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

#### Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system such as posters in the waiting room and on the practice website.

We looked at 8 complaints received in the last 12 months and found these were satisfactorily handled, dealt with in a timely way, and with openness and transparency. Lessons were learnt from individual concerns and complaints and

## Are services responsive to people's needs?

(for example, to feedback?)

also from analysis of trends and action was taken to as a result to improve the quality of care. For example, a patient booked an appointment for a specific procedure. An appointment was made with the nurse however the nurse could not perform the specific procedure as this needed to be done by a GP. The patient complained and the practice

investigated, wrote to the patient and explained that reception staff would be reminded of nurses scope of practice to prevent a similar situation occurring in the future. We saw evidence of this in meeting minutes and interviews with staff.

#### Are services well-led?

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

## **Our findings**

#### Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement with a clear vision and set of values for the practice. This had been developed with all staff, who had shown their support and commitment to the values by signing a copy on display in the staff break area. The mission statement and vision and values were also clearly displayed on the practice website, in the reception area, and throughout the practice including on documents, information leaflets and posters produced by the practice.
- Staff we spoke to knew and understood the values and we found that they were embedded in the organisations culture
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

#### **Governance arrangements**

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

#### Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included support training for all staff on communicating with patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology.
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings and we saw minutes to support this.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so. We noted informal team away days were held every six months.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

## Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

 The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The PPG met regularly, carried out patient surveys and submitted

## Are services well-led?

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

proposals for improvements to the practice management team. For example, the PPG recommended that more should be done to promote online appointment booking to increase awareness and ease congestion on the phone lines during busy periods. The practice responded by increasing the number of online bookable appointments from 5% to 20% and increased awareness of the service to patients. The practice has seen an increase in people using the online service (around 500 patients, 6% of the patient list) and had more appointments to offer for urgent appointments required the same day.

• The practice had gathered feedback from staff through staff meetings, appraisals and discussion. Staff told us

they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

#### **Continuous improvement**

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area. For example, the practice was working with a local hospice to develop and trial a questionnaire for those patients receiving end of life care to evaluate the performance of the practice and identify areas to improve care for this patient group.
