Angel Dental Implant Centre

Inspection Report

92 Chamberlayne Road
Kensal Rise
Kensal Rise
London

Tel: 020 8969 3560

Website: www.angel-implantscentre.co.uk

Date of inspection visit: 6 December 2017

Date of publication: 15/12/2017

Overall summary

We carried out this announced inspection on 6 December 2017 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

We told the NHS England area team that we were inspecting the practice. They had no information of concern.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

Angel Dental Implant Centre is located in the London borough of Brent and provides NHS and private treatment to patients of all ages.

There is access for people who use wheelchairs and those with pushchairs. Car parking spaces are available near the practice.

Practice staffing consists of a principal dentist, two dentists, one hygienist, two dental nurses and a practice manager.

Summary of findings

The practice is owned by a company and as a condition of registration must have a person registered with the Care Quality Commission as the registered manager. Registered managers have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run. The registered manager at Angel Dental Implant Centre was the practice manager

The practice is open Monday to Friday 9am to 5.30pm.

The practice facilities include two treatment room a decontamination room, X-ray room, reception/waiting area, office and a staff room.

On the day of inspection we collected feedback from 46 patients. This information gave us a positive view of the practice.

During the inspection we spoke with the, one dentist, hygienist two dental nurses and the Practice manager. We looked at practice policies and procedures and other records about how the service is managed.

Our key findings were:

- The practice was clean and well maintained.
- The practice had infection control procedures which reflected published guidance.
- The practice had systems to help them manage risk.
- The practice had suitable safeguarding processes and staff knew their responsibilities for safeguarding adults and children.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- The appointment system met patients' needs.
- The practice had effective leadership. Staff felt involved and supported and worked well as a team.
- The practice asked staff and patients for feedback about the services they provided.
- The practice dealt with complaints positively and efficiently.
- Staff knew how to deal with emergencies. However some items of life-saving equipment and medicines as per current national guidelines were not available or were past their expiry date. The practice responded immediately to procure these pieces of equipment.

There were areas where the provider could make improvements. They should:

- Review the protocols and procedures for use of X-ray equipment taking into account Guidance Notes for Dental Practitioners on the Safe Use of X-ray Equipment.
- Review the practice's protocols for the use of rubber dam for root canal treatment taking into account guidelines issued by the British Endodontic Society.
- Review practice's recruitment procedures to ensure that appropriate background checks are completed prior to new staff commencing employment at the practice.
- Review the staff supervision protocols and ensure an effective process is established for the on-going appraisal of all staff

Summary of findings

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.

Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns.

Staff were qualified for their roles and the practice completed essential recruitment checks. However references were not available for all staff members.

Premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had some arrangements in place for dealing with medical and other emergencies.

Improvements were needed to ensure that all of the equipment and medicines were available in

line with national guidelines.

No action

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentist assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the treatment they received as outstanding and painless.

The dentist discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

Improvements were needed so as to ensure there were effective systems to help them monitor staff training.

No action

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from 46 people. Patients were positive about all aspects of the service the practice provided. They told us staff were kind, caring and supportive. They said that they were given helpful, honest explanations about dental treatment, and said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

No action

Summary of findings

Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice's appointment system was efficient and met patients' needs. Patients could get an appointment quickly if in pain.

Staff considered patients' different needs. This included providing facilities for disabled patients and families with children.

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

No action

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and staff felt supported and appreciated.

The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

There were limited arrangements for staff appraisal and for monitoring staff training

No action

Are services safe?

Our findings

Reporting, learning and improvement from incidents

The practice had policies and procedures to report, investigate, respond and learn from accidents, incidents and significant events. Staff knew about these and understood their role in the process.

The practice recorded, responded to and discussed all incidents to reduce risk and support future learning.

The practice received national patient safety and medicines alerts from the Medicines and Healthcare Products Regulatory Authority (MHRA). Relevant alerts were discussed with staff, acted on and stored for future reference.

Reliable safety systems and processes (including safeguarding)

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns. The practice had a whistleblowing policy. Staff told us they felt confident they could raise concerns without fear of recrimination.

We looked at the practice's arrangements for safe dental care and treatment. These included risk assessments which staff reviewed every year. The practice followed relevant safety laws when using needles and other sharp dental items. However one of the dentists didn't always use rubber dams in line with guidance from the British Endodontic Society when providing root canal treatment.

The practice had a business continuity plan describing how the practice would deal events which could disrupt the normal running of the practice

Medical emergencies

Staff knew what to do in a medical emergency and completed training in emergency resuscitation and basic life support every year.

Improvements were needed to ensure that emergency equipment and medicines were available as described in recognised guidance. A number of medicines and equipment items were unavailable including Glucagon, child self-inflating bag with reservoir, syringes and needles.

This was brought to the attention of the manager. They immediately rectified the shortcomings and we were shown confirmation of the order that was placed to procure the items that were missing.

Staff recruitment

The practice had a staff recruitment policy and procedure to help them employ suitable staff. This reflected the relevant legislation. We looked at four staff recruitment records. This showed the practice followed their recruitment procedure. However improvements were needed as references were not taken for two members of staff.

Clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

Monitoring health & safety and responding to risks

The practice's health and safety policies and risk assessments were up to date and reviewed to help manage potential risk. These covered general workplace and specific dental topics. The practice had current employer's liability insurance and checked each year that the clinicians' professional indemnity insurance was up to date.

A dental nurse worked with the dentists, at all times. A dental nurse was also available for the hygienist as and when they required a chair-side support.

Infection control

The practice had an infection prevention and control policy and procedures to keep patients safe. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM01-05) published by the Department of Health. Staff completed infection prevention and control training every year.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in

Are services safe?

line with HTM01-05. The records showed equipment staff used for cleaning and sterilising instruments was maintained and used in line with the manufacturers' guidance.

The practice carried out infection prevention and control audits twice a year. The latest audit showed the practice was meeting the required standards.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment.

We saw cleaning schedules for the premises. The practice was clean when we inspected and patients confirmed this was usual.

Equipment and medicines

We saw servicing documentation for the equipment used. Staff carried out checks in line with the manufacturers' recommendations.

The practice stored and kept records of NHS prescriptions as described in current guidance.

Radiography (X-rays)

We saw evidence that the dentist justified, graded and reported on the X-rays they took. The practice carried out radiograph audits every year following current guidance and legislation.

Clinical staff completed continuous professional development in respect of dental radiography.

Improvements were needed to ensure that the practice arrangements for the safety of the X-ray equipment and monitoring the quality of radiographs were in line with current radiation regulations.

Records were not available to demonstrate that the X-ray equipment was serviced in line with the manufacturer's recommendations.

However this was rectified immediately. The manager made immediate arrangements and we were told that the X-ray equipment would be serviced on the 13th December 2017. They also assured us the X-ray units would not be used until completion of the servicing.

Are services effective?

(for example, treatment is effective)

Our findings

Monitoring and improving outcomes for patients

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentist assessed patients' treatment needs in line with recognised guidance.

We saw that the practice audited patients' dental care records to check that the dentist recorded the necessary information.

The practice carried out conscious sedation for patients who would benefit. This included people who were very nervous of dental treatment and those who needed complex or lengthy treatment. The practice had systems to help them do this safely. These were in accordance with guidelines published by the Royal College of Surgeons and Royal College of Anaesthetists in 2015.

The practice's systems included checks before and after treatment, emergency equipment requirements, medicines management, sedation equipment checks, and staff availability and training. They also included patient checks and information such as consent, monitoring during treatment, discharge and post-operative instructions.

The practice assessed patients appropriately for sedation. The dental care records showed that patients having sedation had important checks carried out first. These included a detailed medical history, blood pressure checks and an assessment of health using the American Society of Anaesthesiologists classification system in accordance with current guidelines. The records showed that staff recorded important checks at regular intervals. These included pulse, blood pressure, breathing rates and the oxygen saturation of the blood.

Health promotion & prevention

The practice was providing preventative care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists told us they prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children based on an assessment of the risk of tooth decay for each child.

The dentists told us that where applicable they discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

Staffing

Staff new to the practice had a period of induction based on a structured induction programme. We confirmed clinical staff completed the continuous professional development required for their registration with the General Dental Council.

Improvements were needed to ensure that staff undertook annual appraisals.

Working with other services

The dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide. This included referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist. The practice monitored urgent referrals to make sure they were dealt with promptly.

Consent to care and treatment

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentists told us they gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to Gillick competence and the dentists were aware of the need to consider this when treating young people under 16. Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

Are services caring?

Our findings

Respect, dignity, compassion and empathy

Staff we spoke with were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were respectful, caring and kind. We saw that staff treated patients respectfully, appropriately and kindly and were friendly towards patients at the reception desk and over the telephone.

Nervous patients said staff were compassionate and understanding.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas

provided privacy when reception staff were dealing with patients. The reception computer screens were not visible to patients and staff did not leave personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

Involvement in decisions about care and treatment

The practice gave patients clear information to help them make informed choices. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting patients' needs

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice had an efficient appointment system to respond to patients' needs. Staff told us that patients who requested an urgent appointment were seen the same day. Patients told us they had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

Staff described an example of a patient who found it unsettling to wait in the waiting room before an appointment. The team kept this in mind to make sure the dentist could see them as soon as possible after they arrived for their appointment.

Promoting equality

The practice had made reasonable adjustments for patients with disabilities. These included step free access and accessible toilet with hand rails and a call bell.

Staff said they could provide information in different formats and languages to meet individual patients' needs. They had access to interpreter/translation services which included British Sign Language and braille.

Access to the service

The practice displayed its opening hours in the premises.

We confirmed the practice kept waiting times and cancellations to a minimum.

The practice was committed to seeing patients experiencing pain on the same day and kept some appointments free for same day appointments. The information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

Concerns & complaints

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint. The practice manager was responsible for dealing with these. Staff told us they would tell the practice manager about any formal or informal comments or concerns straight away so patients received a quick response.

The practice manager told us they aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received. These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

Are services well-led?

Our findings

Governance arrangements

The practice manager and principal dentist had overall responsibility for the management and day to day running of the service and clinical leadership of the practice. Staff knew the management arrangements and their roles and responsibilities.

The practice had policies, procedures and risk assessments to support the management of the service and to protect patients and staff. These included arrangements to monitor the quality of the service and make improvements.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

Leadership, openness and transparency

Staff were aware of the Duty of Candour requirements to be open, honest and to offer an apology to patients if anything went wrong.

Staff told us there was an open, no blame culture at the practice. They said that the principal dentists encouraged them to raise any issues and felt confident they could do this. They knew who to raise any issues with and told us the principal dentist and practice manager were approachable, would listen to their concerns and act appropriately. It was clear the practice worked as a team and dealt with issues professionally.

Learning and improvement

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of radiographs and infection prevention and control. They had clear records of the results of these audits and the resulting action plans and improvements.

The practice manager showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff.

Staff told us they completed mandatory training, including medical emergencies and basic life support, each year. However staff training was not being monitored. The General Dental Council requires clinical staff to complete continuous professional development. Staff told us the practice provided support and encouragement for them to do so.

Practice seeks and acts on feedback from its patients, the public and staff

The practice used patient surveys to obtain patients' views about the service. Results were displayed for patient to view.

Patients were encouraged to complete the NHS Friends and Family Test (FFT). This is a national programme to allow patients to provide feedback on NHS services they have used.
