Is the service responsive?	Good ●
Is the service well-led?	Good ●

Summary of findings

Overall summary

The inspection was unannounced, which meant the provider did not know we were coming. It took place on 14 July 2016. This was the first inspection since the service was registered.

Autism Plus - Bellwood is a care home for adults with learning disabilities or autistic spectrum disorder. The home has a communal lounge and dining room and people who used the service have their own bedroom and bathrooms. The home can accommodate four people. At the time of our visit four people were living at the home.

The home had a registered manager. A registered manager is a person who has registered with the Care Quality Commission to manage the service. Like registered providers, they are 'registered persons.' Registered persons have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated Regulations about how the service is run.

There was a strong person centred and caring culture in the care and support team. (Person centred means that care is tailored to meet the needs and aspirations of each person, as an individual.) The vision of the service was shared by the management team and staff.

Staff told us they worked as part of a team that was a good place to work and staff were committed to providing care that was centred on people's individual needs. Staff received the training they needed to deliver a high standard of care. They told us that they received a lot of good quality training that was relevant to their job.

Everyone we spoke with, including people's relatives, staff and external professionals said people received individualised care in relation to all of their needs, including their autistic spectrum disorder (ASD). They said the service provided good quality specialist care for people, who at times could present behaviour that may challenge others.

There were systems in place to manage risks, safeguarding matters and medication and this made sure people were kept safe. Where people displayed behaviour that was challenging the training and guidance given to staff helped them to manage situations in a consistent and positive way which protected people's dignity and rights.

People received care and support that was responsive to their needs. Care plans provided detailed information about people so staff knew exactly how they wished to be cared for in a personalised way. People were at the forefront of the service and encouraged to develop and maintain their independence. A wide and varied range of activities was on offer for people to participate in if they wished. Regular outings were also organised and people were encouraged to pursue their interests and hobbies.

CQC is required by law to monitor the operation of the Mental Capacity Act (MCA) 2005 Deprivation of Liberty

Safeguards (DoLS), and to report on what we find. The members of the management team and nurses we spoke with had a full and up to date understanding of the Mental Capacity Act (MCA) 2005 and Deprivation of Liberty Safeguards (DoLS). These safeguards protect the rights of adults by ensuring that if there are restrictions on their freedom and liberty these are assessed by appropriately trained professionals. We found that appropriate DoLS applications had been made, and staff were acting in accordance with DoLS authorisations.

We saw that staff recruited had the right values, and skills to work with people who used the service. Where any issues regarding safety were identified in the recruitment process appropriate safeguards had been put in place. Staff rotas showed that the staffing levels remained at the levels required to make sure all peoples needs were met and helped to keep people safe.

Systems were in place which continuously assessed and monitored the quality of the service, including obtaining feedback from people who used the service and their relatives. Records showed that systems for recording and managing complaints, safeguarding concerns and incidents and accidents were managed well and that management took steps to learn from such events and put measures in place which meant lessons were learnt and they were less likely to happen again.

The five questions we ask about services and what we found

We always ask the following five questions of services.

Is the service safe?

Good ●

The service was safe.

People were protected from harm. Staff knew what action to take if they suspected abuse was taking place.

Risks to people had been identified and assessed and there was guidance for staff on how to keep people safe.

There were sufficient numbers of staff to meet people's needs safely. The service followed safe recruitment practices when employing new staff.

Is the service effective?

Good ●

The service was effective.

Staff were trained to a very high standard, which enabled them to meet people's needs in a person-centred way.

Consent to care and treatment was sought in line with the Mental Capacity Act 2005 legislation and staff understood the requirements of this.

Meals were designed to ensure people received nutritious food which promoted good health and reflected their specific needs and preferences.

People were supported to have access to appropriate healthcare services.

Is the service caring?

Good ●

The service was caring.

Everyone we spoke with told us staff were very caring and provided person centred care.

Staff spoke about the focus on promoting people's wellbeing. Staff were very passionate and enthusiastic about ensuring the care they provided was personalised and individualised. Staff were very respectful of people's privacy and dignity.

People were supported to express their views and were actively involved as much as they were able in making decisions about all aspects of their care.

Is the service responsive?

Good ●

The service was very responsive.

Care plans provided detailed and comprehensive information to staff about people's care needs, their likes, dislikes and preferences.

There was a range of activities on offer. These were enjoyed and were mentally stimulating. People were encouraged to pursue their own hobbies and interests.

People's concerns and complaints were investigated, responded to promptly and used to improve the quality of the service.

Is the service well-led?

Good ●

The service was well led.

Everyone we spoke with was extremely positive about the way the home was managed.

The vision and values of the service were understood by staff and reflected in the way staff delivered care. The registered manager and staff had developed a strong person centred culture in the service and all staff we spoke with were fully supportive of this.

Staff told us the management team were very knowledgeable, caring and led by example.

There was a range of robust audit systems in place to measure the quality and care delivered.

Autism Plus - Bellwood

Detailed findings

Background to this inspection

We carried out this inspection under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. This inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

This inspection took place on 14 July 2016 and was unannounced. The inspection was undertaken by an adult social care inspector.

We looked at the PIR, this is a form that asks the provider to give some key information about the service, what the service does well and improvements they plan to make. We looked at the information received about the service from notifications sent to the Care Quality Commission by the registered manager. We met one person who used the service, as the others were away on holiday. As part of this inspection we spent some time with the person who used the service, talking with them and observing support, this helped us understand their experience of the service. We looked at documents and records that related to two people's care, including people's care and support plans, behaviour strategy plans, risk profiles, a medical file, and person centred plans.

We spoke with one member of support staff, the registered manager and one team leader. We also spoke briefly with the acting managing director and the head of northern services for Autism Plus. We looked at the systems in place for managing medicines in the home. This included the storage, handling and stock of medicines and medication administration records (MARs) that staff completed. We reviewed records in respect of the management of the service, such as the quality assurance systems and staff recruitment, training and support. This included five staff personnel files, and details of staff recruitment kept electronically by the provider.

Following the visit we contacted two staff and three people's relatives by telephone, to seek their views of the service. We also contacted three health and social care professionals, including a specialist community nurse and a social worker.

Is the service safe?

Our findings

We spoke with one person who used the service and they indicated that they felt safe and were well looked after by the staff at the home. People's relatives were very happy with the safety of the service.

The external health and social care professionals told us the service provided a safe environment for people. The files we looked at showed the actions were taken to minimise any risks to people who used the service. The people who were using the service at the time of the inspection had assessments about all risk that were pertinent to their needs and these had been reviewed regularly. The assessment and risk management information was good, clear and showed the involvement of the people who used the service and their relatives.

We saw risk assessments were developed where people displayed behaviour that challenged others. These provided guidance to staff so that they managed situations in a consistent and positive way, which protected people's dignity and rights. These plans were reviewed regularly and where people's behaviour changed in any significant way, we saw that referrals were made for professional assessment in a timely way to make sure risks were managed appropriately.

The provider had safeguarding policies and procedures in place to guide practice. Safeguarding procedures were designed to protect people from abuse and the risk of abuse. Staff told us, and records we saw showed that all staff received training in how to recognise and report abuse. Staff we spoke with had a clear understanding of what may constitute abuse and how to report it. All were confident that any concerns reported would be fully investigated and action would be taken to make sure people were safe. Where concerns had been raised the registered manager had notified the relevant authorities and taken action to make sure people were safe.

Whistleblowing is one way in which a staff member can report suspected wrong doing at work, by telling someone they trust about their concerns. Staff were fully aware of these procedures and said they would not hesitate to report any safeguarding concerns and all felt confident the registered manager would respond appropriately. Some staff we spoke with had been in post for several years and were fully aware of all procedures. They told us that the importance of identifying possible abuse and responding immediately to make sure people were safe was consistently raised in staff meetings and supervisions and they had regular training updates.

The control and prevention of infection was managed well. We saw evidence that staff had been trained in infection control. Cleaning schedules were in place and staff were provided with appropriate personal protective equipment (PPE). Support staff demonstrated a good understanding of their role in relation to maintaining high standards of hygiene, and the prevention and control of infection. The areas of the home we saw were sufficiently clean and well maintained when we visited.

We saw there were sufficient staff to keep people safe and the use of staff was effective. Everyone told us there were sufficient staff to make sure each person was safe and that their chosen activities took place.

Prior to starting work, all new employees had to have a returned Disclosure and Barring Service (DBS) check and two references in place and we saw evidence of this. DBS checks help employers make safer recruitment decisions and prevent unsuitable people from working with vulnerable people. We saw that the recruitment and selection process made sure staff recruited had the right skills and experience to support people who used the service. Discussion with members of the management team showed that where any issues arose as to an applicant's suitability to care for vulnerable people, the risks were carefully considered and appropriate safeguards put in place to ensure people's safety.

We found that people received their medicines as prescribed, and the administration was appropriately recorded on the MAR by staff. We found that the arrangements for storing medicines were safe, if a little cramped. There was clear guidance and protocols in place, and staff were able to explain how they supported people to take any medicines that were prescribed 'as and when' required, for example, for pain relief. Staff were aware of signs when people in pain, discomfort, becoming agitated or in a low mood. This helped to make sure people received their medicines when needed.

Is the service effective?

Our findings

Everyone we spoke with praised the quality of the service. The person we met at the time of the inspection told us the food was very good and staff helped them to have a healthy diet. They told us they chose when, what and where they wanted to eat.

People were supported to do their own shopping. We saw their planned menu in the dining room. This showed the meals people had chosen for that day, with staff support. Each was able to choose something different. The menu included pictures to meet people's specific communication needs. The person we spoke with told us they had the choice of something different from the planned menu, if they changed their mind. We saw a good variety of food and healthy snacks were available, including fruit. Staff told us that people were encouraged to assist with cooking their meals.

We looked at one person's care plan in relation to their diet and found this included detailed information about their dietary needs and the level of support they needed to make sure that they received a balanced diet. We saw people's weight was monitored where they were either assessed as at risk of not receiving adequate nutrition, or at risk of becoming overweight due to medical intervention. This was monitored and professional advice obtained if required.

People's care records showed that their day to day health needs were being met. They had good access to healthcare services such as dentist, optical services and GP's. It was clear that staff sought advice from external professionals to make sure people's needs were met. This included psychology and psychiatry services, speech and language therapy, occupational therapy services, dieticians, GPs and hospital consultants.

The professionals we spoke with told us staff received good training and this helped them to understand people who used the service and be effective in dealing with behaviours that challenged. We saw that support staff were able to use picture exchange cards (PECS) and Makaton, a language programme using signs and symbols to help people to communicate. They were trained in, understood and effectively used strategies to enable each person to calm, and this helped to reduce any episodes of behaviour that challenged.

Most staff had worked at the services for several years, and had received regular training updates throughout that time. We were also made aware that when new staff were appointed they were required to complete the Care Certificate, which is a nationally recognised programme of training for care workers. Staff underwent a formal, six week induction period. The first weeks consisted of 'classroom time' completing essential training, and then they shadowed experienced staff, until they were confident to work alone.

Autism Plus, the provider had its own training department, as well as using external training sources. We saw that essential training had been completed by existing staff in moving and handling, health and safety, infection prevention and control, safeguarding, medicines, food hygiene and first aid. Training was also provided in managing challenging behaviour, nutrition and health, epilepsy, equality and diversity; privacy,

dignity and confidentiality and the Mental Capacity Act (MCA) 2005 and Deprivation of Liberty Safeguards (DoLS).

Members of the core staff team had completed qualifications in health and social care, such as the National Vocational Qualification at Levels 2 and 3. There were opportunities for staff to take additional qualifications and for continual professional development. For example, staff had attended training on communication and working with people with autism to be able to meet the needs of people who used the service. The registered manager said that the provider was very supportive of staff. The training offered to staff enabled them with the skills and knowledge to effectively meet people's needs.

Staff were formally supervised and appraised and confirmed to us that they were happy with the supervision and appraisal process. Staff supervisions made sure that staff received regular support and guidance, and appraisals enabled staff to discuss any personal and professional development needs. Supervisions were undertaken regularly in line with the provider's policy and more frequently if required. The staff we talked with felt well supported in their roles and said they were able to approach the team leader and the registered manager with issues at any time.

The Mental Capacity Act 2005 (MCA) provides a legal framework for making particular decisions on behalf of people who may lack the mental capacity to do so for themselves. The Act requires that as far as possible people make their own decisions and are helped to do so when needed. When they lack mental capacity to take particular decisions, any made on their behalf must be in their best interests and as least restrictive as possible. People can only be deprived of their liberty to receive care and treatment when this is in their best interests and legally authorised under the MCA. The application procedures for this in care homes and hospitals are called the Deprivation of Liberty Safeguards (DoLS).

The registered manager had received managers' level training on the MCA, DoLS and we found that appropriate DoLS applications had been made, and staff were acting in accordance with DoLS authorisations. Where Deprivation of Liberty Safeguards decisions had been approved, we found that the necessary consideration and consultation had taken place. This had included the involvement of families and multi-disciplinary teams.

We also checked records in relation to decision making for people who are unable to give consent. This showed that when decisions had been made about a person's care, where they lacked capacity, these had been made in the person's best interests. The staff we spoke with had a good understanding of the MCA and DoLS and were able to apply this in practice, ensuring people's day to day care and support was appropriate and that their needs were met.

The service provided specialist care for young adults with autism and additional learning disabilities. We checked to see that the environment had been designed to promote people's wellbeing and ensure their safety. People's individual needs were met by the adaptation, design and decoration of the home. The home was well maintained and decorated, and furnished in a style appropriate for the people who used the service.

Each person had their own bedroom. One person told us they had been supported to personalise their room and had chosen how it was decorated. Members of the staff team told us that if people did not have family or friends to help them to personalise their rooms, staff would help them to make their rooms homely. There were different areas in the house for people to use, which meant people could either spend time with others or be on their own, if they wanted calm and quiet.

Is the service caring?

Our findings

There was a stable core staff team, all of whom had worked at the service for a long time and knew the needs of people they supported particularly well. The continuity of staff had led to people developing meaningful relationships with staff.

The person we spoke with was very positive about the staff and the management team and people's relatives were very happy with the staff. For instance, one person's relative said, "The staff are brilliant." They said that their family member had, "Built very good bonds" and had become part of the 'family' at Bellwood. Another person's relative explained the benefits of the staff having supported people for many years. They said their family member had built very close relationships with the staff and trusted them. They added, "It's a marvellous place."

Everyone we spoke with thought staff worked hard to make sure people were happy and well. For instance, one person's relative said, "[The staff] go beyond one hundred per cent. There is nothing I can criticise. [The staff] give respect, and they give out love." We saw that staff were concerned about each person's welfare and held them in genuine affection. They also came across as dedicated to making sure people achieved their potential. One person's relative told us their family member had, "Come on in leaps and bounds." They told us staff helped the person to be as independent as possible and added, "It's like being at home." People were supported to maintain important relationships. They were supported to keep in touch with and spend time with their families. People's relatives all told us they had regular contact.

Staff we spoke with told us that the people they supported responded to different communication methods. We saw that visual communication systems had been devised to help people to communicate. This included picture cards, Makaton and visual aids. We saw staff using these to help people to make decisions. It was clear that a lot of care had been taken to design the various communication aids and pictorial versions of people's plans and meeting minutes, and that these had contributed to people's well-being.

We saw that care delivered was of a kind and sensitive nature. Staff interacted with people positively and used their preferred names. We saw that people's dignity and privacy were respected and people confirmed they always experienced this to be the case. Staff training was arranged to meet people's specific needs and included the promotion of people's privacy, dignity and confidentiality. The registered manager told us the support staff had compassion and respect for people. Staff we spoke with told us that all members of the staff team made sure that people were treated with dignity and that their privacy was maintained.

We saw evidence that staff were consistently reassuring and showed kindness towards people when they were providing support, and in day to day conversation. The interaction between the staff member on duty and the person who used the service was inclusive, and it was clear from how they approached the staff member, that they were happy and confident in their company. The registered manager told us that staffing numbers were configured to allow people to participate in activities in the community, and we saw evidence that staff supported people to participate in activities of their choice. The staffing levels meant the activities could be individualised and meet each person's preferences.

There were high levels of engagement with people throughout our visit. From conversations we heard it was clear staff understood each person's needs; they knew how to approach each person and also recognised if they wanted to be on their own. Staff we spoke with knew the people very well, and described their preferences in detail, and how they wished to be approached and supported.

Staff we spoke were committed to providing high quality care. They showed concern for people's wellbeing in a caring and meaningful way. Staff told us they were listened to and valued by the registered manager and felt that they worked together as a good team which improved the quality of life for people they supported. Staff told us that the management team were very good and they all worked very well as a team, supporting each other. They said the registered manager and the team leader were very knowledgeable and caring.

We found that care plans showed a high degree of involvement from the person with reviewing their care needs, and reflected the involvement of their relatives. People's relatives told us staff kept them informed and they were involved in decisions about their family members' care and support. For instance, one person's relative told us, "They do listen and they are one hundred per cent responsive." Another person's relative told us they attended their family member's reviews three monthly, as well as their annual review. They said of the staff, "I can talk to them about anything."

We saw that people's religious, cultural and personal diversity was recognised, with their care plans outlining their backgrounds and beliefs. For example, staff explained how they balanced each person's preferences and choices, with their family members' beliefs and the person's background, taking these into account and making sure that the person's rights and choices were respected.

Staff had put a lot of work into making sure that people's care files plans, and reviews were very person centred and individualised. They included pictures and photographs of each person, of who and what was important to them, things they liked, and things they had achieved. All of the information about people and their involvement in day to day decisions was in an easy read format with lots of pictures to assist people's understanding and participation.

Is the service responsive?

Our findings

The relatives and the health and social care professionals we spoke with told us the staff were very responsive to each person's needs. People's relatives were pleased with the level of engagement and activities people were provided with. For instance, one person's relative told us, "[My family member] is never in. [My family member] has the most fantastic life." They told us their family member enjoyed going out for meals and doing aerobics, and had plenty of opportunities to do the things they liked. Another person's relative said their family member liked to be active and had an interest in trains and buses. They said, "If [my family member] asks for anything it's done. [My family member] has one to one support and is out and about all day, on trains, buses, and horse riding. They go everywhere."

The registered manager told us people engaged in a range of activities and they went out into the community on a regular basis. Some people had relatively high levels of staff support in the community and there were staff to be able to facilitate this. The activities were designed for each person and we saw that staff actively encouraged and supported them to be involved.

We saw people's activity planners, which had pictures to assist people to understand and make and communicate their decisions. We saw that people engaged in a broad range of activities and interests. These were different for each person and it was clear that holidays were planned around people's individual interests. We saw pictorial records of how people had been involved in choosing what they wanted from their holidays and where they wanted to go. People were also involved in activities to promote their independence, such as housekeeping tasks.

Prior to their admission to the home, a detailed care needs assessment had been carried out for each person. This meant that the registered manager could be sure the needs of the individual would be met, before offering them a place. In addition, the assessment process meant that staff members had some understanding of people's needs when they began living at the home. Following this initial assessment, care plans were developed detailing the care, treatment and support needed to make sure personalised care was provided to people.

The care plan format provided a framework for staff to develop care in a personalised way. The care plan was person centred and had been tailored to the person's individual needs and had been reviewed on a very regular basis to make sure that they remained accurate and up to date. Where changes were identified, the information had been disseminated to staff, who responded quickly when the person's needs changed, which made sure their individual needs were met.

Members of the core staff team demonstrated a very good awareness of how people with complex needs could present with behaviour that challenged others and how this could affect people's wellbeing. The individualised approach to people's needs meant that staff provided flexible and responsive care, recognising that people could live a full life involved in the community and interests. The team leader told us that the staff team had a particularly good knowledge of each person who was using the service, their needs and their triggers, and how to divert and distract them to help prevent episodes of challenging behaviour.

Each person had a helpful and informative communication profile in their care plan and there was a strong emphasis on supporting people to communicate their thoughts and preferences. Various tools were used to help with this, including information boards. For instance, there were photographs of the staff on a staff rota board to assist people to understand who was supporting them each day. The records we saw and information provided by everyone we spoke with showed that the service had been very successful in supporting people to express themselves.

People were actively encouraged to be involved in making sure their house was safe. For example, safety in the home was discussed in service user meetings, using pictures to assist people to understand and to be engaged in the process. Some people who used the service had taken on specific tasks, such as formal 'health and safety walk rounds' and again, pictorial lists help support them to be involved in meaningful ways.

There was a comprehensive complaints policy this was available to everyone who received a service, relatives and visitors. The procedure was on display in the service where everyone was able to access it. The registered manager was able to explain the procedure to make sure any complaints or concerns raised would be acted on to make sure people were listened to.

Discussion with the members of the management team showed that complaints were taken very seriously. The complaints record we saw showed these were investigated thoroughly and promptly. We looked at a complaint that had been received and it had been addressed and resolved. Staff told us they were aware of the complaints procedure and knew how to respond to complaints. The person who used the service told us they would tell staff members if they had any complaints or concerns. They did not have any complaints to tell us about when we spoke.

It was evident from talking with people's relatives that they knew how to complain if they needed to. The relatives we spoke with said any concerns they raised were always dealt with appropriately. One person's relative told us about a concern they had discussed with the managers and senior managers in the company. They said they felt that they were listened to and their concern was taken seriously, that the Chief Executive had taken time to meet with them to discuss their concern and was responsive. They said, "It's a good organisation, and they learn from issues."

Is the service well-led?

Our findings

At the time of our inspection the service had a registered manager who had been registered with the Care Quality Commission. There was positive feedback from everyone we spoke with about the leadership and there was a high degree of confidence in how the service was run. There was a clear management structure in place and staff were aware of their roles and responsibilities. The staff we spoke with said they felt comfortable to approach any one of the members of the management team.

The managers, support staff and the other professionals we spoke with told us the communication in the team was very good. All stakeholders said the service was well managed. For instance, one person's relatives felt the service was very well led. They added, "You wouldn't get better anywhere else."

The staff told us that the members of the management team were caring, very approachable and always put the needs of people who used the service first. It was clear that staff were confident in their role and also knew when to seek advice from their managers. The staff we spoke with told us they received regular supervision and support. They had an annual appraisal of their work, which ensured they could express any views about the service in a private and formal setting.

There were regular staff meetings arranged, to make sure good communication of any changes or new systems. The minutes documented actions required. These were logged as actions to determine who was responsible to follow up the actions and resolve them. Staff told us there were also thorough handovers at each shift change, so they were aware of all that had happened and any changes, to be able to meet people's need.

We also saw there were various forums for people who used the service, providing opportunities for people to express their views. Information was available in an easy to read format to assist people who used the service to understand and be involved. The provider also used service user friendly questionnaires to obtain people's views on the service and the support they received. The acting managing director told us they and the Chief Executive for Autism Plus had been consulting with people's relatives via question and answer sessions that were being held at multiple dates and venues. Autism Plus also produced a newsletter, which outlined the achievements and successes of people who used the service and of staff.

Autism Plus had a clear philosophy and from our observations it was evident that these vision and values had been embedded into the way the service was managed, putting people at the heart of the service.

The provider had signed up to the government's 'Social Care Commitment' which is the adult social care sector's promise to provide people who need care and support with high quality services. We saw evidence that Autism Plus was accredited by 'BILD', the British Institute of Learning Disabilities and by 'Investors in People', which is an organisation providing and assessing best practice in people management.

The organisational governance procedure was designed to keep the performance of the service under regular review and to learn from areas for improvement that were identified. We saw that audits were regularly carried out in all aspects of the service including areas such as the home environment, health and

safety, infection control, records, medication, and staff training. It was clear that timely action was taken to address any improvements required.

We found that recorded accidents and incidents were monitored by the registered manager to make sure any triggers or trends were identified. We saw the records of this, which showed these, were looked at to identify if any systems could be put in place to eliminate the risk. There was also a health and safety manager employed by the provider, who had a remit to monitor accident and incident reporting, to advise on risk management, and support the management team. They carried out data analysis identifying trends and common factors in accidents and incidents, and safeguarding issues.

Systems were in place for recording and managing all complaints and, safeguarding concerns. Documentation showed that the management team monitored, and took steps to learn from these and put measures in place which meant they were less likely to happen again. The head of northern services for Autism Plus was the appointed safeguarding lead, and ensured all safeguarding incidents were logged, and necessary actions completed and reviewed, including the lessons learned and actions taken.
