## Overall summary

### Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Cambridge Medical Group on 10 November 2015. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand.
- Patients said they found it easy to make an appointment with a named GP and that there was continuity of care, with urgent appointments available the same day.

- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the Duty of Candour.

We saw some areas of outstanding practice including:

Cambridge Medical Group is a well-established training practice for registrars and third year and fifth year medical students. One of the GPs in the practice achieved trainer of the year for registrars for Durham and Tees Valley in 2014.

Training is also given to second year nursing students. One student at a time works at the practice over one or two weeks. These secondments continue over ten weeks in the practice. During this time the student observes the GPs during consultations and similarly with the nurse practitioner. The student then carries out some nursing tasks under the supervision of the nurse practitioner. An

# Summary of findings

evaluation is completed by the student and those evaluations seen showed that the students had enjoyed their time at the practice and felt they had learnt a lot about general practice.

**Professor Steve Field (CBE FRCP FFPH FRCGP)**  
Chief Inspector of General Practice

# Summary of findings

## The five questions we ask and what we found

We always ask the following five questions of services.

### Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information, a verbal and written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Good

### Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework showed patient outcomes were at or above average for the locality and compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with multidisciplinary teams to understand and meet the range and complexity of patients' needs.

Good

### Are services caring?

The practice is rated as good for providing caring services.

- Data from the National GP Patient Survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

# Summary of findings

## Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

## Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to this.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

Good

# Summary of findings

## The six population groups and what we found

We always inspect the quality of care for these six population groups.

### Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.

Good

### People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Nationally reported data for 2014/2015 showed that outcomes for patients with long term conditions were good.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

### Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Nationally reported data for 2014/2015 showed that outcomes for patients with long term conditions such as asthma were good.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- Appointments were available outside of school hours and the premises were suitable for children and babies.

Good

# Summary of findings

- We saw positive examples of joint working with midwives, health visitors and school nurses.

## **Working age people (including those recently retired and students)**

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- The practice worked collaboratively with other agencies to offer further services such as physiotherapy and alcohol counselling.
- Extended hours were provided on a Monday, Tuesday and Wednesday mornings between 7.00am and 8.00am and Monday evenings from 6.30pm to 8.00pm.

**Good**

## **People whose circumstances may make them vulnerable**

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with multi-disciplinary teams in the case management of vulnerable people.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

**Good**

## **People experiencing poor mental health (including people with dementia)**

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

**Good**

# Summary of findings

- Nationally reported dThis was 11.4% above the local CCG average and 5.5% above the national average.
- The practice regularly worked with multi-disciplinary teams in the case management of people experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

# Summary of findings

## What people who use the service say

The national GP patient survey results published on 2 July 2015. The results showed the practice was performing in line with local and national averages. 287 survey forms were distributed and 128 were returned. This represented 47% response rate.

- 80% find it easy to get through to this surgery by phone compared to a CCG average of 77% and a national average of 73%.
- 86% find the receptionists at this surgery helpful compared to a CCG average of 89% and a national average of 87%.
- 90% were able to get an appointment to see or speak to someone the last time they tried compared to a CCG average of 87% and a national average of 85%.
- 92% say the last appointment they got was convenient compared to a CCG average of 93% and a national average of 92%.

- 82% describe their experience of making an appointment as good compared to a CCG average of 76% and a national average of 73%.
- 86% usually wait 15 minutes or less after their appointment time to be seen compared to a CCG average of 72% and a national average of 65%.

Feedback on the comments cards and from patients we spoke with reflected the results of the national survey.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 23 comment cards which were all positive about the standard of care received. Patients commented on the friendliness and respect given to them and also how staff were approachable and spent time listening to them.

We spoke with five patients during the inspection. All of patients said they were happy with the care they received and thought staff were approachable, committed and caring.

# Cambridge Medical Group

## Detailed findings

### Our inspection team

#### Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser, and a practice manager specialist adviser.

## Background to Cambridge Medical Group

Cambridge Medical Group is situated in Linthorpe in Middlesbrough and provides services under a General Medical Services (GMS) contract with NHS England, Durham, Darlington And Tees Area Team to the practice population of 7257 covering patients of all ages.

The practice has four GP partners (two male and two female) and a nurse practitioner partner. There are also two salaried GPs, both female. The practice also has a practice manager, two practice nurses and two health care assistants. There is also a team of secretarial, administration and reception staff.

The practice is open between 8.00am and 6.00pm Monday to Friday. Appointments are from 8.10am to 5.00pm daily for a GP and from 9.00am to 5.30pm for a nurse practitioner or practice nurse. Extended surgery hours are offered on Monday evenings between 6.30pm and 8.00pm and Monday, Tuesday and Wednesday mornings between 7.00am and 8.00am.

The practice has opted out of providing out of hours services (OOHs) for their patients. When the practice is closed patients use the 111 service to contact the OOHs

provider. The Out of Hours service is provided by NDUC. Information for patients requiring urgent medical attention out of hours is available in the waiting area, in the practice information leaflet and on the practice website.

## Why we carried out this inspection

We inspected this service as part of our comprehensive inspection programme.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

## How we carried out this inspection

For example:

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 10 November 2015.

During our visit we:

- Spoke with a range of staff, GPs, a nurse practitioner, a practice nurse, the practice manager, administration and reception staff and also spoke with patients who used the service.

# Detailed findings

- Observed how patients were being cared for and talked with carers and/or family members
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.'

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

# Are services safe?

## Our findings

### Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports national patient safety alerts and minutes of meetings where these were discussed. Lessons were shared to make sure action was taken to improve safety in the practice. For example, a patient had been discharged from hospital without a discharge letter or sufficient medication. The patient ran out of medication and rang the practice. From this the GP needed to contact a Consultant at the hospital regarding the patient's admission and discharge and their medication changes. As a result of this incident the case history was made anonymous and used in the teaching of junior doctors at the trust induction.

When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information, a verbal and written apology and were told about any actions to improve processes to prevent the same thing happening again.

### Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse that reflected relevant legislation and local requirements and policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training relevant to their role. GPs were trained to Safeguarding level 3.

- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service check (DBS check). (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The nurse practitioner was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency drugs and vaccinations, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing and security). The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Prescription pads were securely stored and there were systems in place to monitor their use. One of the nurses had qualified as an Independent Prescriber and could therefore prescribe medicines for specific clinical conditions. They received mentorship and support from the medical staff for this extended role.
- We reviewed four personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.
- There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

### Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a

## Are services safe?

health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure that enough staff were on duty.

### **Arrangements to deal with emergencies and major incidents**

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and fit for use.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met peoples' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

### Management, monitoring and improving outcomes for people

The practice participated in the Quality and Outcomes Framework (QOF). (This is a system intended to improve the quality of general practice and reward good practice). The practice used the information collected for the QOF and performance against national screening programmes to monitor outcomes for patients. Results from 2014/2015 showed the practice achieved 98.4% of the total number of points available. Practices can exclude patients which is known as 'exception reporting', lower exception reporting rates are more positive. The practice exception reporting rate was 11% which was 2% above the local CCG and national average. This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/15 showed;

- Performance for diabetes related indicators was 88.4% which was 0.8% below the local CCG and 0.8% below the national average.
- Performance for mental health related indicators was 100% which was 7.9% above the CCG and 9.2% above the national average.
- The percentage of patients with COPD who have had a review, undertaken by a healthcare professional, including an assessment of breathlessness in the preceding 12 months was 80.5%. This was 5.5% above the local CCG and 0.6% above the national average.

- The percentage of patients with asthma who have had an asthma review in the preceding 12 months that included an assessment of asthma control, was 84.1%. This was 18.3% above the local CCG and 14.4% above the national average.

Clinical audits demonstrated quality improvement.

- There had been four clinical audits completed in the last two years, two of these were completed audits where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result of an audit following family planning guidance included the reduction of a contraceptive medication where patients Body Mass Index (BMI) were over 35.

### Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. It covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff for example, for those reviewing patients with long-term conditions. Staff administering vaccinations and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccinations could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support during sessions, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had had an appraisal within the last 12 months.

# Are services effective?

## (for example, treatment is effective)

- Staff received training that included: safeguarding, fire procedures, basic life support and information governance awareness. Staff had access to and made use of e-learning training modules and in-house training.

### Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results. Information such as NHS patient information leaflets were also available.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care services to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. We saw evidence that multi-disciplinary team meetings took place on a monthly basis and that care plans were routinely reviewed and updated.

### Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.

- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through records audits.

### Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support.

- These included patients in the last 12 months of their lives, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation. Patients were then signposted to the relevant service.

The practice's uptake for the cervical screening programme was 100%, which was above the CCG average of 1.8% and the national average of 2.4%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 81% to 100% and five year olds from 96.4% to 98.8%.

Flu vaccination rates for the over 65s were 81%, compared to the national average of 73%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for people aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

# Are services caring?

## Our findings

### Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 23 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients we spoke with told us that health issues were discussed with them and they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was above average for its satisfaction scores on consultations with GPs and nurses. For example:

- 93% said the GP gave them enough time compared to the CCG average of 88% and national average of 87%.
- 93% said the GP was good at listening to them compared to the CCG average of 89% and national average of 89%.
- 92% said the last GP they spoke to was good at treating them with care and concern compared to the CCG average of 86% and national average of 85%.
- 97% said they had confidence and trust in the last GP they saw compared to the CCG average of 95% and national average of 95%.
- 89% said the nurse gave them enough time compared to the CCG average of 93% and national average of 92%.

- 87% said the nurse was good at listening to them compared to the CCG average of 93% and national average of 91%.
- 90% said the last nurse they spoke to was good at treating them with care and concern compared to the CCG average of 92% and national average of 90%.
- 98% said they had confidence and trust in the last nurse they saw compared to the CCG average of 97% and national average of 97%.
- 86% patients said they found the receptionists at the practice helpful compared to the CCG average of 89% and national average of 87%.

### Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback on the comment cards we received was also positive and aligned with these views.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 86% said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 87% and national average of 86%.
- 79% said the last GP they saw was good at involving them in decisions about their care compared to the CCG average of 82% and national average of 81%.
- 92% said the last nurse they saw was good at explaining tests and treatments compared to the CCG average of 91% and national average of 90%.
- 85% said the last nurse they saw was good at involving them in decisions about their care compared to the CCG average of 87% and national average of 85%.

Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.

## Are services caring?

### **Patient and carer support to cope emotionally with care and treatment**

Notices in the patient waiting room told patients how to access a number of support groups and organisations.

The practice's computer system alerted GPs if a patient was also a carer. There was a practice register of all people who were carers. Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified.

- The practice offered early and late appointments for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who would benefit from these.
- Same day appointments were available for children and those with serious medical conditions.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately/were referred to other clinics for vaccines available privately.
- There were disabled facilities, a hearing loop and translation services available.

### Access to the service

The practice was open between 8.00am and 6.00pm Monday to Friday. Appointments were from 8.10am to 5.00pm daily for a GP and from 9.00am to 5.30pm for a nurse practitioner or practice nurse. Extended surgery hours were offered at the following times on Mondays between 6.30pm and 8.00pm and Monday, Tuesday and Wednesday mornings between 7.00am and 8.00am. There were pre-bookable appointments that could be booked up to six weeks in advance; urgent appointments were also available for people that needed them.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to local and national averages.

- 86% of patients were satisfied with the practice's opening hours compared to the CCG average of 79% and national average of 75%.
- 80% patients said they could get through easily to the surgery by phone compared to the CCG average of 77% and national average of 73%.
- 82% patients described their experience of making an appointment as good compared to the CCG average of 76% and national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

### Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system.

We looked at four complaints received in the last 12 months and found they were satisfactorily handled, and dealt with in a timely way, with openness and transparency. Lessons were learnt from concerns and complaints and action was taken to as a result to improve the quality of care.

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

## Our findings

### Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

### Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit which was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

### Leadership and culture

The partners in the practice had the experience, capacity and capability to run the practice and ensure high quality care. They prioritise safe, high quality and compassionate care. The partners were visible in the practice and staff told us they were approachable and always took the time to listen to all members of staff.

The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents

When there were unexpected or unintended safety incidents:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology
- They kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident in doing so and felt supported if they did.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

### Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through surveys. There was a virtual patient participation group PPG which assisted with surveys but the practice manager was in the process of setting up regular meetings in the practice. Staff told us they would not hesitate to discuss any concerns or issues with colleagues and management. They told us they felt involved and engaged to improve how the practice was run.

### Continuous improvement

There was a strong focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area.
