Perfect Smile Kensington

Inspection Report

Perfect Smile Kensington
25-27 Kew Road
W14 8EZ

Tel: 020 3355 8505

Website: www.perfectsmile-dental.com

Date of inspection visit: 25 June 2018

Date of publication: 03/08/2018

Overall summary

We carried out this announced inspection on 25 June 2018 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

Perfect Smile Kensington is in the Royal Borough of **Kensington** and Chelsea, West London and provides NHS and private treatment to patients of all ages.

There is level access for people who use wheelchairs and those with pushchairs. The practice has nearby parking.

The dental team includes four dentists, a dental hygienist, a dental therapist, a receptionist and an area manager who is undertaking the duties of a practice manager until a recently recruited practice manager takes up their role. The practice has two treatment rooms.

Summary of findings

The practice is owned by an individual who is the principal dentist there. They have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run.

On the day of inspection, we collected 19 CQC comment cards filled in by patients.

During the inspection we spoke with a dentist (who works as a hygienist at the practice), a dental nurse, a receptionist and the area manager. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open:

- Monday 9.00am to 8.00pm
- Tuesday 9.00am to 5pm
- Wednesday 9.00 am to 8.00pm
- Thursday 9.00am to 6.00pm
- Friday 8.00 am to 5.00pm
- Saturday 9.00am to 1.00pm

Our key findings were:

- The practice appeared clean and well maintained.
- The practice had infection control procedures which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The practice had systems to help them manage risk.
- The practice had suitable safeguarding processes and staff knew their responsibilities for safeguarding adults and children.
- The practice had staff recruitment procedures. However, improvements were required.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- The practice was providing preventive care and supporting patients to ensure better oral health.
- The appointment system met patients' needs.
- The practice had good leadership, but improvements were required in regards to developing a culture of continuous improvement.
- Staff felt involved and supported and worked well as a team.
- The practice asked staff and patients for feedback about the services they provided.
- The practice dealt with complaints positively and efficiently.
- The practice had suitable information governance arrangements.

There were areas where the provider could make improvements. They should:

- Review the practice's recruitment policy and procedures to ensure accurate, complete and detailed records are maintained for all staff.
- Review the practice's audit protocols to ensure audits of various aspects of the service, such as radiography and infection prevention have documented learning points that are shared with all relevant staff and the resulting improvements can be demonstrated.
- Review the current staffing arrangements to ensure all dental care professionals are adequately supported by a trained member of the dental team when treating patients in a dental setting considering the guidance issued by the General Dental Council.
- Review the practice's protocols for the use of rubber dam for root canal treatment taking into account guidelines issued by the British Endodontic Society.

Summary of findings

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes to provide safe care and treatment.

They used learning from incidents and complaints to help them improve.

Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns.

Staff were qualified for their roles and the practice completed essential recruitment checks. However, some improvements were required regarding the checks that had been undertaken.

Premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had suitable arrangements for dealing with medical and other emergencies.

No action

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentists assessed patients' needs and provided care and treatment in line with recognized guidance. Patients described the treatment they received as methodical, fantastic and professional. The dentists discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The practice supported staff to complete training relevant to their roles and had systems to help them monitor this.

No action

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from 19 people. Patients were positive about all aspects of the service the practice provided. They told us staff were caring, friendly and brilliant.

They said that they were given helpful and clear explanations about dental treatment and said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

No action

Summary of findings

Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice's appointment system was efficient and met patients' needs. Patients could get an appointment quickly if in pain.

Staff considered patients' different needs. This included providing facilities for disabled patients and families with children. The practice had arrangements to help patients with hearing loss.

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

No action

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. However, some improvements were required in relation to some of the audits undertaken.

There was a clearly defined management structure and staff felt supported and appreciated.

The practice team kept complete patient dental care records which were clearly written or typed and stored securely.

The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

No action

Are services safe?

Our findings

Safety systems and processes (including staff recruitment, Equipment & premises and Radiography (X-rays))

The practice had clear systems to keep patients safe.

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns, including notification to the CQC.

The practice had a whistleblowing policy. Staff told us that they felt confident they could raise concerns without fear of recrimination.

We were told the dentists usually used rubber dams in line with guidance from the British Endodontic Society when providing root canal treatment. However, the rubber dam we were shown had expired in July 2017. In instances where the rubber dam was not used alternatives were not suitably documented in the dental care record and risk assessments were not completed. We spoke with the provider about this and they told us they would purchase new rubber dam and ensure that dentists used them consistently going forward.

The practice had a business continuity plan describing how the practice would deal with events that could disrupt the normal running of the practice.

The practice had a staff recruitment policy and procedure to help them employ suitable staff; and some of the appropriate checks in place. However, there were some gaps. There were no references in three of the five recruitment records we checked. We spoke with the provider about this and they acknowledged that improvements were required regarding the recording of references. They told us that they had sometimes taken verbal references and not recorded them. They also said that a number of the staff worked at the other practices

owned by the same provider and reference information was not always recorded centrally to enable all locations to access the information. They told us they would review their process for recording references going forward.

We noted that clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

The practice ensured that facilities and equipment were safe and that equipment was maintained according to manufacturers' instructions, including electrical and gas appliances.

Records showed that fire detection and firefighting equipment such as fire extinguishers were regularly tested.

The practice had suitable arrangements to ensure the safety of the radiography equipment. They met current radiation regulations and had the required information in their radiation protection file.

We saw evidence that the dentist justified, graded and reported on the radiographs they took.

Clinical staff completed continuing professional development (CPD) in respect of dental radiography.

Risks to patients

There were systems to assess, monitor and manage risks to patient safety.

The practice's health and safety policies, procedures and risk assessments were up to date and reviewed regularly to help manage potential risk. The practice had current employer's liability insurance.

We looked at the practice's arrangements for safe dental care and treatment. The staff followed relevant safety regulation when using needles and other sharp dental items. A sharps risk assessment had been undertaken as part of the practice general risk assessment that was updated annually.

The provider had a system in place to ensure clinical staff had received appropriate vaccinations, including the vaccination to protect them against the Hepatitis B virus, and that the effectiveness of the vaccination was checked. Staff knew how to respond to a medical emergency and had completed training in emergency resuscitation and basic life support (BLS) every year.

Are services safe?

Emergency equipment and medicines were available as described in recognised guidance. Staff kept records of their checks to make sure these were available, within their expiry date, and in working order.

A dental nurse worked with the dentist. The dental hygienist and therapist worked alone but practice staff supported them when required. However, a risk assessment was not in place for when the dental hygienist and therapist worked without chairside support. We spoke with the provider about this and they told us they would review these arrangements.

The provider had suitable risk assessments to minimise the risk that can be caused from substances that are hazardous to health.

The practice had an infection prevention and control policy. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM01-05) published by the Department of Health. Staff completed infection prevention and control training and received updates as required.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM01-05. The records showed equipment used by staff for cleaning and sterilising instruments were validated, maintained and used in line with the manufacturers' guidance.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment. Most of the recommendations had been actioned and records of water testing and dental unit water line management were in place.

We saw cleaning schedules for the premises. The practice was clean when we inspected and patients' feedback confirmed this was usual.

The practice had policies and procedures in place to ensure clinical waste was segregated and stored appropriately in line with guidance.

The practice carried out infection prevention and control audits twice a year. The latest audit showed the practice was meeting the required standards.

Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment to patients.

We looked at a sample of dental care records and noted that individual records were written and managed in a way that kept patients safe. Dental care records we saw were accurate, complete, and legible and were kept securely and complied with data protection requirements.

Patient referrals to other service providers contained specific information which allowed appropriate and timely referrals in line with practice protocols and current guidance.

Safe and appropriate use of medicines

The practice had reliable systems for appropriate and safe handling of medicines.

There was a suitable stock control system of medicines which were held on site. This ensured that medicines did not pass their expiry date and enough medicines were available if required.

The practice stored and kept records of NHS prescriptions as described in current guidance.

The dentist was aware of current guidance with regards to prescribing medicines.

Track record on safety

There were comprehensive risk assessments in relation to safety issues; these were updated regularly. The practice monitored and reviewed safety incidents. All incidents were investigated, documented and discussed with the rest of the dental practice team to prevent such occurrences happening again in the future. This helped it to understand risks that would lead to safety improvements.

Lessons learned and improvements

The practice learned and made improvements when things went wrong.

There were adequate systems for reviewing and investigating when things went wrong. The practice learned and shared lessons, identified themes and acted to improve safety in the practice. For example, we saw that arrangements for public use of toilets were updated following an incident.

Are services safe?

There was a system for receiving and acting on safety alerts. The practice learned from external safety events as well as patient and medicine safety alerts.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment, care and treatment

The practice had systems to keep dental practitioners up to date with current evidence-based practice. We saw that clinicians assessed needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

The practice offered dental implants. These were placed by one of the dentist who had undergone appropriate post-graduate training in this speciality. The provision of dental implants was in accordance with national guidance.

The practice had access to an intra-oral camera to enhance the delivery of care.

Helping patients to live healthier lives

The practice was providing preventive care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentist told us that they prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children based on an assessment of the risk of tooth decay.

The dentist told us that where applicable they discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

The practice was aware of national oral health campaigns and local schemes available in supporting patients to live healthier lives.

Patients with more severe gum disease were recalled at more frequent intervals to review their compliance and to reinforce home care preventative advice.

Consent to care and treatment

The practice obtained consent to care and treatment in line with legislation and guidance.

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentist told us that they gave patients information about

treatment options and the risks and benefits of these so that they could make informed decisions. Patients confirmed that their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to the legal precedent (formerly called the Gillick competence) by which a child under the age of 16 years of age can consent for themselves. The staff were aware of the need to consider this when treating young people under 16 years of age.

Staff described how they involved patients' relatives or carers when appropriate and made sure that they had enough time to explain treatment options clearly.

Monitoring care and treatment

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentist assessed patients' treatment needs in line with recognised guidance.

We saw that the practice audited patients' dental care records to check that the dentist recorded the necessary information. However, improvements were required regarding summarising and sharing learning points from audits.

Effective staffing

Staff had the skills, knowledge and experience to carry out their roles. Staff new to the practice had a period of induction based on a structured induction programme. We confirmed that clinical staff completed the continuing professional development required for their registration with the General Dental Council.

Staff told us that they discussed training needs at annual appraisals. We saw evidence of completed appraisals and how the practice addressed the training requirements of staff.

Co-ordinating care and treatment

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

Are services effective?

(for example, treatment is effective)

The dentist confirmed that they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide.

The practice had systems and processes to identify, manage, follow up and where required refer patients for specialist care when presenting with bacterial infections.

The practice also had systems and processes for referring patients with suspected oral cancer under the national two weeks wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist.

The practice monitored all referrals to make sure they were dealt with promptly.

Are services caring?

Our findings

Kindness, respect and compassion

Staff treated patients with kindness, respect and compassion.

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were caring, friendly and welcoming. We saw that staff treated patients respectfully, appropriately and kindly and were friendly towards patients at the reception desk and over the telephone.

Patients said staff were compassionate and understanding and they told us they could choose whether they saw a male or female dentist.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

Privacy and dignity

The practice respected and promoted patients' privacy and dignity.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas

provided privacy when reception staff were dealing with patients. The reception computer screens were not visible to patients and staff did not leave patients' personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

Involving people in decisions about care and treatment

Staff helped patients be involved in decisions about their care and were aware of the Accessible Information Standards.

- Interpretation services were available for patients who did not have English as a first language.
- Staff communicated with patients in a way that they could understand, for example, communication aids including a hearing loop.

The practice gave patients clear information to help them make informed choices.

The practice website provided patients with information about the range of treatments available at the practice.

The dentist described to us the methods they used to help patients understand treatment options discussed. These included for example an intra-oral camera, models, videos, X-ray images.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

Patients described high levels of satisfaction with the responsive service provided by the practice.

A Disability Access audit had been completed and an action plan formulated to continually improve access for patients.

Timely access to services

Patients could access care and treatment from the practice within an acceptable timescale for their needs.

The practice displayed its opening hours in their practice information folder and on their website.

The practice had an efficient appointment system to respond to patients' needs. Staff told us that patients who requested an urgent appointment were seen the same day. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

They took part in an emergency on-call arrangement with dentist 111 out of hour's service.

The practice website, patient information folder and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open.

Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice information folder explained how to make a complaint.

The area manager was responsible for dealing with these. Staff told us they would tell the area manager about any formal or informal comments or concerns straight away so that patients received a quick response.

The area manager told us that they aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received over a twelve-month period. These showed that the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

Are services well-led?

Our findings

Leadership capacity and capability

The area manager had the experience, capacity and skills to deliver the practice strategy and address risks to it.

They were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.

The area manager was visible and approachable. They worked closely with staff and others to make sure they prioritised compassionate and inclusive leadership.

The practice had effective processes to develop leadership capacity and skills, including planning for the future leadership of the practice.

Vision and strategy

There was a clear vision and set of values. The practice had a realistic strategy and supporting business plans to achieve priorities.

Culture

The practice had a culture of high-quality sustainable care.

Staff stated they felt respected, supported and valued. They were proud to work in the practice.

The practice focused on the needs of patients.

Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the Duty of Candour.

Staff we spoke with told us that they could raise concerns and were encouraged to do so. They had confidence that these would be addressed.

Governance and management

There were clear responsibilities, roles and systems of accountability to support good governance and management.

Two of the dentists had overall responsibility for the management and clinical leadership of the practice. The area manager was responsible for the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities.

The provider had a system of clinical governance in place which included policies, protocols and procedures that were accessible to all members of staff and were reviewed on a regular basis.

There were clear and effective processes for managing risks, issues and performance.

Appropriate and accurate information

The practice acted on appropriate and accurate information.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

The practice used patient surveys to obtain staff and patients' views about the service. We saw the results of the March 2018 survey that showed 100% of patients would recommend the service.

Patients were encouraged to complete the NHS Friends and Family Test (FFT). This is a national programme to allow patients to provide feedback on NHS services they have used.

The practice gathered feedback from staff through meetings and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on.

Continuous improvement and innovation

There were systems and processes for learning, continuous improvement and innovation.

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records, radiographs and infection prevention and control. However, improvements could be made to the quality assurance process regarding the range of audits. For example, some of the audits had not included documented learning points that could be shared with colleagues. We spoke to the provider about these issues and they advised us they would review the quality assurance process.

Are services well-led?

The area manager showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff.

The dental nurses and receptionists had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

Staff told us that they completed 'highly recommended' training as per General Dental Council professional standards. This included undertaking medical emergencies and basic life support training annually.

The General Dental Council also requires clinical staff to complete continuing professional development. Staff told us the practice provided support and encouragement for them to do so.
