Website: www.poppletondentalpractice

Date of inspection visit: 10 April 2017
Date of publication: 26/04/2017

Overall summary

We carried out this announced inspection on 10 April 2017 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

Poppleton Dental Practice is in Poppleton, York and provides private treatment to adults and children.

There is level access for people who use wheelchairs and pushchairs. Car parking spaces are available near the practice.

The dental team includes two dentists (one of which is the principal), four dental nurses (one of which is a trainee), two dental hygienists, a decontamination nurse/cleaner and a receptionist. The practice has three treatment rooms.

Summary of findings

The practice is owned by an individual who is the principal dentist there. They have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run.

On the day of inspection we collected 14 CQC comment cards filled in by patients. This information gave us a positive view of the practice.

During the inspection we spoke with two dentists, three dental nurses and the receptionist. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open:

Monday, Wednesday, Thursday, Friday 9am – 5:30pm

Tuesday 9am – 7pm.

Our key findings were:

- The practice was clean and well maintained.
- The practice had infection control procedures which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The practice had systems to help them manage risk.
- The practice had suitable safeguarding processes and staff knew their responsibilities for safeguarding adults and children.
- The practice had thorough staff recruitment procedures.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- The appointment system met patients' needs.
- The practice had effective leadership. Staff felt involved and supported and worked well as a team.
- The practice asked staff and patients for feedback about the services they provided.
- The practice dealt with complaints positively and efficiently.

Summary of findings

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.

Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns.

Staff were qualified for their roles and the practice completed essential recruitment checks.

Premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had suitable arrangements for dealing with medical and other emergencies.

No action

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentists assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the treatment they received as marvellous, exceptional and caring. The dentists discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The practice supported staff to complete training relevant to their roles and had systems to help them monitor this.

No action

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from 14 people. Patients were positive about all aspects of the service the practice provided. They told us staff were kind, professional and communicated well. They said that they were given information to make informed decisions about their treatment and felt the staff went above and beyond to help out of normal working hours, and they said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

No action

Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

No action

Summary of findings

The practice's appointment system was efficient and met patients' needs. Patients could get an appointment quickly if in pain.

Staff considered patients' different needs. This included providing facilities for disabled patients and families with children. The practice had access to interpreter services and had arrangements to help patients with sight or hearing loss.

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and staff felt supported and appreciated.

The practice team kept complete patient dental care records which were, clearly written or typed and stored securely.

The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

No action

Are services safe?

Our findings

Reporting, learning and improvement from incidents

The practice had policies and procedures to report, investigate, respond and learn from accidents, incidents and significant events. Staff knew about these and understood their role in the process.

The practice recorded, responded to and discussed all incidents to reduce risk and support future learning.

The practice received national patient safety and medicines alerts from the Medicines and Healthcare Products Regulatory Authority (MHRA). Relevant alerts were discussed with staff, acted on and stored for future reference.

Reliable safety systems and processes (including safeguarding)

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns.

The practice had a whistleblowing policy. Staff told us they felt confident they could raise concerns without fear of reprimand.

We looked at the practice's arrangements for safe dental care and treatment. These included risk assessments which staff reviewed every year. The practice followed relevant safety laws when using needles and other sharp dental items. The dentists used rubber dams in line with guidance from the British Endodontic Society when providing root canal treatment and we were told they had started to use this more for other conservation treatments.

The practice had a business continuity plan describing how the practice would deal with events which could disrupt the normal running of the practice.

Medical emergencies

Staff knew what to do in a medical emergency and completed training in emergency resuscitation and basic life support every year.

Emergency equipment and medicines were available as described in recognised guidance. Staff kept records of their checks to make sure these were available, within their expiry date, and in working order.

Staff recruitment

The practice had a staff recruitment policy and procedure to help them employ suitable staff. This reflected the relevant legislation. We looked at three staff recruitment files. These showed the practice followed their recruitment procedure.

Clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

Monitoring health & safety and responding to risks

The practice's health and safety policies and risk assessments were up to date and reviewed to help manage potential risk. These covered general workplace and specific dental topics. The practice had current employer's liability insurance and checked each year that the clinicians' professional indemnity insurance was up to date.

A dental nurse worked with the dentists and dental hygienists when they treated patients.

Infection control

The practice had an infection prevention and control policy and procedures to keep patients safe. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM01-05) published by the Department of Health. Staff completed infection prevention and control training every year.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM01-05. The records showed equipment staff used for cleaning and sterilising instruments was maintained and used in line with the manufacturers' guidance.

Are services safe?

The practice carried out infection prevention and control audits, the most recent was in March 2017. The audit showed the practice was meeting the required standards.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment.

We saw cleaning schedules for the premises. The practice was clean when we inspected and patients confirmed this was usual.

Equipment and medicines

We saw servicing documentation for the equipment used. Staff carried out checks in line with the manufacturers' recommendations.

The practice had suitable systems for prescribing, dispensing and storing medicines.

The practice stored and kept records of prescriptions as described in current guidance.

Radiography (X-rays)

The practice had suitable arrangements to ensure the safety of the X-ray equipment. They met current radiation regulations and had the required information in their radiation protection file.

We saw evidence that the dentists justified, graded and reported on the X-rays they took. The practice carried out X-ray audits six monthly following current guidance and legislation.

Clinical staff completed continuous professional development in respect of dental radiography.

Are services effective?

(for example, treatment is effective)

Our findings

Monitoring and improving outcomes for patients

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentists assessed patients' treatment needs in line with recognised guidance.

We saw that the practice had an external accreditation company whom audited patients' dental care records to check that the dentists recorded the necessary information.

Health promotion & prevention

The practice believed in preventative care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists told us they prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children based on an assessment of the risk of tooth decay for each child.

The dentists told us they discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

Staffing

Staff new to the practice had a period of induction based on a structured induction programme. We confirmed clinical staff completed the continuous professional development required for their registration with the General Dental Council.

Staff told us they discussed training needs at annual appraisals. We saw evidence of completed appraisals. One member of staff had recently completed an impression taking course and this was being used where possible within the practice.

Working with other services

Dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide. These included referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist. The practice monitored urgent referrals to make sure they were dealt with promptly.

The dentists were in the process of being mentored to restore dental implants after they had been placed by a local specialist service. They told us they had been involved with supporting their patients throughout the process.

Consent to care and treatment

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentists told us they gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to Gillick competence and the staff were aware of the need to consider this when treating young people under 16. Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

Are services caring?

Our findings

Respect, dignity, compassion and empathy

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were caring, friendly and listened. We saw that staff treated patients with respect, courtesy and were efficient and were friendly towards patients at the reception desk and over the telephone.

Nervous patients said staff were compassionate and understanding.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas had limited privacy when reception staff were dealing with patients. Staff told us that if a patient asked for more privacy they would take them into another room. The reception computer screens were not visible to patients and staff did not leave personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

The practice provided drinking water and information folders with detailed information and advice sheets for patients to take away if required.

Involvement in decisions about care and treatment

The practice gave patients clear information to help them make informed choices. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them. A dentist described the conversations they had with patients to satisfy themselves they understood their treatment options.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

The practice's website provided patients with information about the range of treatments available at the practice. These included general dentistry and treatments for gum disease and had a bi annual newsletter "toothface" to show the patients what had been improved within the practice or if the team had been involved with local charity work. We saw pictures of staff completing a charity bike ride and we were told they supported the local May Day celebrations by providing a stall with free apples and toothpaste. The practice supported local charity events by sponsorship or by donations.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting patients' needs

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice had an efficient appointment system to respond to patients' needs. Staff told us that patients who requested an urgent appointment were seen the same day. Patients told us they had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

Staff told us that they currently had some patients for whom they needed to make adjustments to enable them to receive treatment. The dentists worked closely with a local nursing home to provide care at the practice due to the accessibility. More time would be booked to ensure the patient had time to be accommodated.

We were told the staff supported local schools and provided information packs and goodie bags to be given out with preventative advice.

Staff told us that they telephoned some older patients on the morning of their appointment to make sure they could get to the practice.

As a result of patient feedback the website now had the ability to book appointments directly at a time and date that met the patient's needs. New patients could choose whom they wished to see and book a new patient exam. A system was introduced to highlight these patients so a follow up call and practice information pack could be sent out. Existing patients received a text or email reminder with a link to the booking system if they wished to use this and the practice told us this was being utilised more and more and they had received positive feedback about the process.

Promoting equality

The practice made reasonable adjustments for patients with disabilities. These included step free access accessible toilet with hand rails and a call bell

Staff said they could provide information in different formats and languages to meet individual patients' needs. They had access to interpreter and translation services which included access to British Sign Language and braille.

Access to the service

The practice displayed its opening hours in the premises, their information leaflet and on their website.

We confirmed the practice kept waiting times and cancellations to a minimum.

The practice was committed to seeing patients experiencing pain on the same day and kept two appointments free for same day appointments with each clinician. The dentists provided their own care for out of hours appointments. The website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

Concerns & complaints

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint. The registered provider was responsible for dealing with these. Staff told us they would tell the registered provider about any formal or informal comments or concerns straight away so patients received a quick response.

The registered provider told us they aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received within the past 12 months. These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

Are services well-led?

Our findings

Governance arrangements

The principal dentist had overall responsibility for the management and clinical leadership of the practice. Staff knew the management arrangements and their roles and responsibilities.

The registered provider had policies, procedures and risk assessments to support the management of the service and to protect patients and staff. These included arrangements to monitor the quality of the service and make improvements.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

Leadership, openness and transparency

Staff were aware of the duty of candour requirements to be open, honest and apologetic to patients if anything went wrong.

Staff told us there was an open, no blame culture at the practice. They said the registered provider encouraged them to raise any issues and felt confident they could do this. They knew who to raise any issues with and told us the registered provider was approachable, would listen to their concerns and act appropriately. The registered provider discussed concerns at staff meetings and it was clear the practice worked as a team and dealt with issues professionally.

The practice held meetings where staff could raise any concerns and discuss clinical and non-clinical updates. Immediate discussions were arranged to share urgent information.

Learning and improvement

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records, X-rays and infection prevention and control. They had clear records of the results of these audits and the resulting action plans and improvements.

The principal dentist showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff. The dental nurses had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

Staff told us they completed mandatory training, including medical emergencies and basic life support, each year. The General Dental Council requires clinical staff to complete continuous professional development. Staff told us the practice provided support and encouragement for them to do so.

Practice seeks and acts on feedback from its patients, the public and staff

The practice used patient surveys, comment cards and verbal comments to obtain staff and patients' views about the service. We saw examples of suggestions from patients and staff the practice had acted on including extended opening hours and an online appointment booking service.

The practice was active with social media and collated feedback from those sites to improve the service.
