Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Supreme Medical Centre on the 29 November 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and a system in place for reporting and recording significant events. However, reviews and investigations were not thorough enough.
- The practice had clearly defined and embedded systems to minimise risks to patient safety.
- Staff were aware of current evidence based guidance. Staff had been trained to provide them with the skills and knowledge to deliver effective care and treatment.
- Results from the national GP patient survey showed patients were treated with compassion, dignity and respect and were involved in their care and decisions about their treatment.

- Information about services and how to complain was available. Improvements were made to the quality of care as a result of complaints and concerns.
- Patients we spoke with said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of the requirements of the duty of candour. Examples we reviewed showed the practice complied with these requirements.

The areas where the provider should make improvement are:

- Make arrangements to ensure appropriate security and monitoring of prescription pads.
- Improving the uptake of the Childhood Immunisation programme.

Summary of findings

- Introduce a broader programme of clinical audits including re-audits to ensure that improvements are measurable.

Ensure significant events were investigated, analysed and learnings shared. Assess, monitor and improve the timing of appointments in view of the low national patient survey results for waiting times.

Professor Steve Field (CBE FRCP FFPH FRCGP)

Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

Good

- From the sample of documented examples we reviewed, we found there was a system for reporting and significant events. However the recording of them needed to be more detailed; lessons were shared to make sure action was taken to improve safety in the practice. When things went wrong patients were informed as soon as practicable, received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices to minimise risks to patient safety.
- Blank prescription forms and pads were securely stored but the numbers were not recorded.
- Staff demonstrated that they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role.
- The practice had adequate arrangements to respond to emergencies and major incidents.

Are services effective?

The practice is rated as good for providing effective services.

Good

- Data from the Quality and Outcomes Framework showed patient outcomes were at or above average compared to the national average.
- Staff were aware of current evidence based guidance such as NICE.
- Clinical audits did not always demonstrate quality improvement.
- Staff had the skills and knowledge to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.
- End of life care was coordinated with other services involved.

Are services caring?

The practice is rated as good for providing caring services.

Good

Summary of findings

- Data from the national GP patient survey showed patients rated the practice higher than others for several aspects of care.
- Survey information we reviewed showed that patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

Good

- The practice understood its population profile and had used this understanding to meet the needs of its population.
- The practice took account of the needs and preferences of patients with life-limiting conditions, including patients with a condition other than cancer and patients living with dementia.
- Patients we spoke with said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and evidence from three examples reviewed showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Are services well-led?

The practice is rated as good for being well-led.

Good

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had policies and procedures to govern activity and held regular governance meetings.
- An overarching governance framework supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- Staff had received inductions, annual performance reviews and attended staff meetings and training opportunities.
- The provider was aware of the requirements of the duty of candour. The three examples we reviewed demonstrated that the practice complied with these requirements.

Summary of findings

- The partners encouraged a culture of openness and honesty. The practice had systems for being aware of notifiable safety incidents and sharing the information with staff and ensuring appropriate action was taken.
- The practice proactively sought feedback from staff and patients and we saw examples where feedback had been acted on. The practice engaged with the patient participation group.
- There was a focus on continuous learning and improvement at all levels. Staff training was a priority and was built into staff rotas.
- GPs who were skilled in specialist areas used their expertise to offer additional services to patients. For example one of the GPs had a particular interest in patients with musculoskeletal problems and chronic pain and used this expertise to help reduce referrals.

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

Good

The practice is rated as good for the care of older people.

- Staff were able to recognise the signs of abuse in older patients and knew how to escalate any concerns.
- The practice offered proactive, personalised care to meet the needs of the older patients in its population.
- The practice was responsive to the needs of older patients, and offered home visits and urgent appointments for those with enhanced needs.
- The practice identified at an early stage older patients who may need palliative care as they were approaching the end of life. It involved older patients in planning and making decisions about their care, including their end of life care.
- The practice followed up on older patients discharged from hospital and ensured that their care plans were updated to reflect any extra needs.
- Where older patients had complex needs, the practice shared summary care records with local care services, such as the intermediate care team, district nurses and the rapid response team.
- All the patients in this group have a named GP.

People with long term conditions

Good

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in long-term disease management and patients at risk of hospital admission were identified as a priority.
- The percentage of patients with diabetes, on the register, in whom the last blood pressure reading (measured in the preceding 12 months) is 140/80 mmHg or less was 85% which was better than both the CCG average of 76% and the national average of 78%.
- The practice followed up on patients with long-term conditions discharged from hospital and ensured that their care plans were updated to reflect any additional needs.
- There were emergency processes for patients with long-term conditions who experienced a sudden deterioration in health.
- All these patients had a named GP and there was a system to recall patients for a structured annual review to check their

Summary of findings

health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Families, children and young people

The practice is rated as good for the care of families, children and young people.

- From the sample of documented examples we reviewed we found there were systems to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of accident and emergency (A&E) attendances.
- Immunisation rates were relatively low for all standard childhood immunisations.
- Patients told us, on the day of inspection, that children and young people were treated in an age-appropriate way and were recognised as individuals.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- The practice worked with midwives, health visitors and school nurses to support this population group. For example, in the provision of ante-natal, post-natal checks for mum, and 6 weeks check for new born baby–combined triple appointments offered with a GP.
- The practice had emergency processes for acutely ill children and young people and for acute pregnancy complications.

Good

Working age people (including those recently retired and students)

The practice is rated as good for the care of working age people (including those recently retired and students).

- The needs of these populations had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care, for example, extended opening hours and Saturday appointments.
- Telephone consultations during lunch time hours from 1 to 2 pm.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- The practice offered temporary registration or immediate and necessary registration to students.

Good

Summary of findings

- Pre-bookable and opportunistic NHS Health Checks appointments.
- Extended hour's appointments with 2 GPs on Mondays for 1 hour/week from 6:30pm to 7:30pm (totalling 12 appointments).

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

Good

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- End of life care was delivered in a coordinated way which took into account the needs of those whose circumstances may make them vulnerable.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice had information available for vulnerable patients about how to access various support groups and voluntary organisations.
- For patients who had complex care needs such as; physical, social, psychiatric they were referred to Network-led Community Mental Health Services or Complex Care Team, Medical Foundation for Victim of Torture.
- Staff interviewed knew how to recognise signs of abuse in children, young people and adults whose circumstances may make them vulnerable. They were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

Good

- The practice carried out advance care planning for patients living with dementia.
- The practice specifically considered the physical health needs of patients with poor mental health and dementia, for example those with mental health issues had annual health check and reviews of blood pressure, alcohol intake, and smears tests for women.

Summary of findings

- The practice had a system for monitoring repeat prescribing for patients receiving medicines for mental health needs.
- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses whose alcohol consumption has been recorded in the preceding 12 months was 90% which was comparable to the CCG average of 91% and the national average of 89%.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those living with dementia.
- Patients at risk of dementia were identified and offered an assessment.
- The practice had information available for patients experiencing poor mental health about how they could access various support groups and voluntary organisations.
- The practice had a system to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff interviewed had a good understanding of how to support patients with mental health needs and dementia.

Summary of findings

What people who use the service say

The national GP patient survey results were published in July 2016. The results showed the practice was performing in line with local and national averages. Two hundred and sixty seven survey forms were distributed and 112 were returned. This represented three percent of the practice's patient list.

- 81% of patients described the overall experience of this GP practice as good compared with the CCG average of 82% and the national average of 85%.
- 77% of patients described their experience of making an appointment as good compared with the CCG average of 70% and the national average of 73%.
- 75% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 42 comment cards which were all positive about the standard of care received. Patients said they were satisfied with the care they received, felt involved in their care and thought staff were approachable, committed and caring.

We spoke with three patients during the inspection. All the patients said they were satisfied with the care they received and thought staff were approachable, committed and caring. The friends and family test results showed that 72% (73% nationally) of patients found it easy to get through on the phone and 71% (78% nationally) said they would recommend the surgery to someone new to the area. 96% (95% Nationally) had confidence and trust in the last GP they saw or spoke to.

Areas for improvement

Action the service **SHOULD** take to improve

- Make arrangements to ensure appropriate security and monitoring of prescription pads.
- Improving the uptake of the Childhood Immunisation programme.
- Introduce a broader programme of clinical audits including re-audits to ensure that improvements are measurable.
- Ensure significant events were investigated, analysed and learnings shared.
- Assess, monitor and improve the timing of appointments in view of the low national patient survey results for waiting times.

Supreme Medical Centre

Detailed findings

Our inspection team

Our inspection team was led by:

The team was led by a CQC Lead Inspector and a GP specialist adviser.

Background to Supreme Medical Centre

Supreme Medical Centre is located on Regents Park Road in North Finchley. It is well served by Finchley Central underground station and local buses. The practice is on the ground floor in a purpose built property. The building is owned by a private landlord, however the practice is responsible for the maintenance and upkeep of the premises.

The premises have step free access and an accessible toilet with baby changing facilities.

The practice provides NHS primary medical services to approximately 4351 patients through a General Medical Services (GMS) contract (a GMS contract is the contract between general practices and NHS England for delivering primary care services to local communities) with NHS Barnet Clinical Commissioning Group (CCG). The practice provides a range of enhanced services including, child and travel vaccination, the removal of sutures and ambulatory blood pressure monitoring.

It is registered with the Care Quality Commission to carry on the regulated activities of maternity and midwifery services, family planning services, treatment of disease, disorder or injury and diagnostic and screening procedures.

There are two GP partners (female) both working eight sessions per week, a salaried GP (female) working seven sessions per week and a sessional GP (male) working two sessions per week. The practice nurse (female) works three sessions per week. The clinical team are supported by a full time practice manager and three reception staff.

The practice is open from;

- Monday: 8:30am – 6pm
- Tuesday: 8:30am – 6pm
- Wednesday: 8:30am – 6pm
- Thursday: 8:30am – 1pm
- Friday: 8:30am – 6pm

Appointments were from;

- Monday: 9am – 11:30pm and 4pm to 6pm
- Tuesday: 9am – 12:30pm and 3:45pm to 6pm
- Wednesday: 9am – 11:30am and 3:45pm to 6pm
- Thursday: 9am – 12pm
- Friday: 9am – 11:30pm and 3pm to 5pm

Extended hours appointments were offered between 6:30pm to 7:30pm on Mondays. The practice also provides telephone consultations and home visits; the home visits are carried out between morning and evening surgery. Out of hour's services including weekends are covered by Barndoc (who provide telephone consultations, home visits or patients can be seen at the local hospital from 6:00pm to 08:30am Monday, Tuesday, Wednesday and Friday and 1:00pm to 8:00am on Thursday) and the 111 service.

Data showed that the practice population is 47% white English and at 18% the next largest group is white other. The practice has 58% of its patient population in the working age group and 24% over 60. At 82 years for males and 86 years for females, the average life expectancy is higher than the England averages of 79 and 83 years, respectively. Information published by Public Health

Detailed findings

England rates the level of deprivation within the practice population group as eight on a scale of one to ten. Level one represents the highest levels of deprivation and level ten the lowest.

Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 29 November 2016. During our visit we:

- Spoke with a range of staff (GPs, nurse, practice manager and reception staff) and spoke with patients who used the service.
- Observed how patients were being cared for in the reception area and talked with carers and/or family members
- Reviewed a sample of the personal care or treatment records of patients.

- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.
- Visited all practice locations
- Looked at information the practice used to deliver care and treatment plans.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- older people
- people with long-term conditions
- families, children and young people
- working age people (including those recently retired and students)
- people whose circumstances may make them vulnerable
- people experiencing poor mental health (including people living with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was a system for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- From the sample of three documented significant events we reviewed we found that when things went wrong with care and treatment, patients were informed of the incident as soon as reasonably practicable, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where significant events were discussed. However the practice did not carry out thorough analysis of the significant events there was no evidence of discussion or learning and meeting notes were brief
- We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, when the local hospital instructed the practice to change a patient's medication, the patient queried this which prompted the practice to check with the hospital. It was found that the hospital had sent the details for the wrong patient. The patient was informed and apologised to and the event was discussed at the next practice meeting. The practice decided to obtain telephone verification before changing patient's medicines.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to minimise risks to patient safety.

- Arrangements for safeguarding reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. One of the GP partners was the lead for safeguarding and attended meetings when possible or provided reports where necessary for other agencies.
- Staff interviewed demonstrated they understood their responsibilities regarding safeguarding and had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained to child protection or child safeguarding level three the nurse to level two and administration staff level one.
- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).

The practice maintained appropriate standards of cleanliness and hygiene.

- We observed the premises to be clean and tidy. There were cleaning schedules and monitoring systems in place.
- The practice nurse was the infection prevention and control (IPC) clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an IPC protocol and staff had received up to date training. Annual IPC audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.

The arrangements for managing medicines, including emergency medicines and vaccines, in the practice minimised risks to patient safety (including obtaining, prescribing, recording, handling, storing, security and disposal).

- There were processes for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local clinical commissioning group pharmacy teams, to ensure prescribing was in line with

Are services safe?

best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored but the numbers were not recorded so there was no system to monitor use. Patient Group Directions (PGD) had been adopted by the practice to allow the nurse to administer medicines in line with legislation (PGDs are written instructions for the supply or administration of medicines to groups of patients who may not be individually identified before presentation for treatment).

We reviewed three personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, evidence of satisfactory conduct in previous employments in the form of references, qualifications, registration with the appropriate professional body and the appropriate checks through the DBS.

Monitoring risks to patients

There were procedures for assessing, monitoring and managing risks to patient and staff safety.

- There was a health and safety policy available.
- The practice had an up to date fire risk assessment and carried out regular fire drills. There were designated fire marshals within the practice. There was a fire evacuation plan which identified how staff could support patients with mobility problems to vacate the premises.
- All electrical and clinical equipment was checked and calibrated to ensure it was safe to use and was in good working order.
- The practice had a variety of other risk assessments to monitor safety of the premises such as control of

substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- There were arrangements for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system to ensure enough staff were on duty to meet the needs of patients.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.
- The practice had a comprehensive business continuity plan for major incidents such as a power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

Clinicians were aware of relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 92% of the total number of points available compared with the clinical commissioning group (CCG) average of 94% and national average of 95%. The practice exception reporting rate was 9% which was comparable to the CCG average of 8% and the national average of 10% (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2015/16 showed:

- Performance for diabetes related indicators was similar to national averages. For example, the percentage of patients on the diabetes register with a record of a foot examination and risk classification within the preceding 12 months was 89% which was higher than the national average of 81%. Over all exception reporting for diabetes indicators was 10% compared with 12% nationally.
- The percentage of patients with hypertension having regular blood pressure tests was 87%, which was better

than both the CCG average of 81% and the national average of 83%. Overall exception reporting for hypertension was 2% better than the CCG and the national average of 4%.

- Performance for mental health related indicators was similar to the national average. For example, the percentage of patients diagnosed with a mental health condition who had a comprehensive, agreed care plan documented in the record in the preceding 12 months was 91% which was the same as the CCG average and comparable to the national average of 89%.
- The percentage of patients diagnosed with dementia whose care plan has been reviewed in a face-to-face review in the preceding 12 months was 82% which was comparable to the CCG average of 85% and the national average of 84%. Exception reporting was 3% compared to 4% within the CCG and 7% nationally.

There was evidence of quality improvement including clinical audit:

- There had been four clinical audits commenced in the last two years, none of these were completed two cycle audits where the improvements made were implemented and monitored. Findings from the single cycle audits were used by the practice to make quality improvements to services. For example, the practice noticed that their prescribing of Non-steroidal anti-inflammatory drugs (NSAIDs) was lower than other practices (NSAIDs are medications widely used to relieve pain, reduce inflammation, and bring down a high temperature (fever)). The practice decided to monitor their prescribing, consulted with patients about the change and all new patients were put on NSAIDs. Their target was to get 71% needing these medicines on NSAIDs and over a 12 month period the prescribing went from 44% to 72%. This meant that the patients taking these medicines had a reduced risk of cardiovascular problems.

Effective staffing

Evidence reviewed showed that staff had the skills and knowledge to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.

Are services effective?

(for example, treatment is effective)

- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, the nurse reviewing patients with long-term conditions had regular update training in asthma and diabetes.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs and nurses. All staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- From the examples we reviewed we found that the practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Information was shared between services, with patients'

consent using a shared care record. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

The practice ensured that end of life care was delivered in a coordinated way which took into account the needs of different patients, including those who may be vulnerable because of their circumstances.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support and signposted them to relevant services. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation.
- A dietetic advice was available on the premises and smoking cessation advice was available from a local support group.
- Pre-bookable and opportunistic NHS Health Checks appointments.

The practice's uptake for the cervical screening programme was 72%, which was lower than the CCG average of 78% and the national average of 81%.

Childhood immunisations were carried out in line with the national childhood vaccination programme. Uptake rates for the vaccines given were lower than the CCG/national

Are services effective?

(for example, treatment is effective)

averages. For example, rates for the vaccines given to under two year olds ranged from 53% to 81% (78% to 89% for the CCG and 73% to 95% nationally) and five year olds from 50% to 89% (62% to 92% for the CCG and 81% to 95% nationally).

There was a policy to offer telephone or written reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national

screening programmes for bowel and breast cancer. There were failsafe systems to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

During our inspection we observed that members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- Consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew that if patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.
- Patients could request to be treated by a clinician of the same sex.

All of the 42 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We spoke with three patients including two members of the patient participation group (PPG). They told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comments highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was above average for its satisfaction scores on consultations with GPs and nurses. For example:

- 93% of patients said the GP was good at listening to them compared with the clinical commissioning group (CCG) average of 88% and the national average of 89%.
- 88% of patients said the GP gave them enough time compared to the CCG average of 84% and the national average of 87%.
- 94% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 91% and the national average of 92%.

- 87% of patients said the last GP they spoke to was good at treating them with care and concern compared to the national average of 85%.
- 95% of patients said the nurse was good at listening to them compared with the clinical commissioning group (CCG) average of 87% and the national average of 91%.
- 96% of patients said the nurse gave them enough time compared with the CCG average of 87% and the national average of 92%.
- 100% of patients said they had confidence and trust in the last nurse they saw compared with the CCG average of 96% and the national average of 97%.
- 94% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the national average of 91%.
- 85% of patients said they found the receptionists at the practice helpful compared with the CCG average of 84% and the national average of 87%.

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 84% of patients said the last GP they saw was good at explaining tests and treatments compared with the CCG average of 85% and the national average of 86%.
- 84% of patients said the last GP they saw was good at involving them in decisions about their care compared to the national average of 85%.

Are services caring?

- 94% of patients said the last nurse they saw was good at explaining tests and treatments which was higher than the CCG average of 85% and comparable to the national average of 90%.
- 94% of patients said the last nurse they saw was good at involving them in decisions about their care which was higher than the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that interpretation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available. Patients were also told about multi-lingual staff who might be able to support them with languages such as Italian, Hindi and Swahili.
- Information leaflets were available in easy read format.
- The Choose and Book service was used by patients when appropriate. (Choose and Book is a national electronic referral service which gives patients a choice of place, date and time for their first outpatient appointment in a hospital).

Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website. Support for isolated or house-bound patients included signposting to relevant support and volunteer services.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 81 patients as carers (2% of the practice list). Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had experienced bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice understood its population profile and had used this understanding to meet the needs of its population:

- The practice offered extended hours on a Monday from 6:30pm to 7:30pm for working patients who could not attend during normal opening hours.
- Telephone consultations during lunch time hours from 1pm to 2 pm.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- The practice took account of the needs and preferences of patients with life-limiting progressive conditions. There were early and ongoing conversations with these patients about their end of life care as part of their wider treatment and care planning.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccines available on the NHS and were referred to other clinics for vaccines available privately.
- There were accessible facilities and interpretation services available.
- The practice has considered and implemented the NHS England Accessible Information Standard to ensure that disabled patients receive information in formats that they can understand and receive appropriate support to help them to communicate.
- One of the GPs had a particular interest in patients with musculoskeletal problems and chronic pain and used this expertise to help reduce referrals. For patients who had complex care needs such as physical, social, psychiatric they were referred to Network-led Community Mental Health Services or Complex Care Team, Medical Foundation for Victim of Torture.

Access to the service

The practice was open from;

- Monday: 8:30am – 6pm

- Tuesday: 8:30am – 6pm
- Wednesday: 8:30am – 6pm
- Thursday: 8:30am – 1pm
- Friday: 8:30am – 6pm

Appointments were from;

- Monday: 9am – 11:30pm and 4pm to 6pm
- Tuesday: 9am – 12:30pm and 3:45pm to 6pm
- Wednesday: 9am – 11:30am and 3:45 to 6pm
- Thursday: 9am – 12pm
- Friday: 9am – 11:30pm and 3pm to 5pm

Extended hours appointments were 6:30pm to 7:30pm on Mondays. In addition to pre-bookable appointments that could be booked up to four weeks in advance, urgent appointments were also available for patients that needed them. Telephone consultations during lunch time hours from 1pm to 2pm.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to local and national averages.

- 69% of patients were satisfied with the practice's opening hours compared with the clinical commissioning group (CCG) average of 72% and the national average of 76%.
- 72% of patients said they could get through easily to the practice by phone compared to the national average of 73%.
- 79% of patients said that the last time they wanted to speak to a GP or nurse they were able to get an appointment compared with the CCG average of 72% and the national average of 76%.
- 94% of patients said their last appointment was convenient compared with the CCG average of 89% and the national average of 92%.
- 77% of patients described their experience of making an appointment as good compared with the CCG average of 70% and the national average of 73%.
- 38% of patients said they don't normally have to wait too long to be seen which was lower than the CCG average of 54% and the national average of 58%.

Patients told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system to assess:

Are services responsive to people's needs?

(for example, to feedback?)

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

For home visits patients had to call in the morning before 10:00am and the GPs triaged the calls to make an informed decision on prioritisation according to clinical need. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

Listening and learning from concerns and complaints

The practice had a system for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.

- We saw that information was available to help patients understand the complaints system, there was a posters displayed and a summary leaflet explaining the process.

We looked at three complaints received in the last 12 months and found that these were satisfactorily handled, dealt with in a timely way, with openness and transparency with dealing with the complaint. Lessons were learned from individual concerns and complaints and also from analysis of trends and action was taken to as a result to improve the quality of care. For example, a patient came to collect a prescription which could not be located within the practice. The patient was unhappy about waiting for another one. It was found that the prescription had been stapled to another one which was no longer at the practice, this was picked up by the pharmacist, the patient received an apology and a new prescription was issued. The practice reviewed their processes and added in extra checks which ensured that the filing system for prescriptions was more effective.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a clear strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities. GPs and nurses had lead roles in key areas, for example, the practice nurse was the infection control lead and the practice manager was the fire safety lead.
- Practice specific policies were implemented and were available to all staff. These were updated and reviewed regularly.
- A comprehensive understanding of the performance of the practice was maintained. Practice meetings were held monthly which provided an opportunity for staff to learn about the performance of the practice. The practice did not have a programme of continuous clinical and internal audit that was used to monitor quality and to make improvements.
- There were appropriate arrangements for identifying, recording and managing risks, issues and implementing mitigating actions such as legionella, fire and health and safety risk assessments.
- We saw evidence from minutes of a meetings structure that allowed for lessons to be learned and shared following significant events and complaints.

Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and

capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included support training for all staff on communicating with patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. From the sample of three documented examples we reviewed we found that the practice had systems to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology.
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure and staff felt supported by management.

- The practice held and minuted a range of multi-disciplinary meetings including meetings with district nurses and social workers to monitor vulnerable patients. GPs, where required, met with health visitors to monitor vulnerable families and safeguarding concerns.
- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so. Minutes were comprehensive and were available for practice staff to view.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients and staff. It proactively sought feedback from:

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

- patients through the patient participation group (PPG) and through surveys and complaints received. The PPG met regularly, carried out patient surveys and submitted proposals for improvements to the practice management team.
- the NHS Friends and Family test, complaints and compliments and suggestions received.
- staff through staff meetings, appraisals and discussion. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run and the practice worked well together as a team.
