

Mr. David Trent

# South Bank Dental Care

## Inspection Report

**164 Jamaica Road,  
Bermondsey,  
London,  
SE16 4RT**

Tel: 020 7237 3413

Website: [www.southbankdentalcare.co.uk/](http://www.southbankdentalcare.co.uk/)

Date of inspection visit: 4 July 2016

Date of publication: 17/08/2016

### Overall summary

We carried out an announced comprehensive inspection on 4 July 2016 to ask the practice the following key questions; Are services safe, effective, caring, responsive and well-led?

#### **Our findings were:**

##### **Are services safe?**

We found that this practice was providing safe care in accordance with the relevant regulations.

##### **Are services effective?**

We found that this practice was providing effective care in accordance with the relevant regulations.

##### **Are services caring?**

We found that this practice was providing caring services in accordance with the relevant regulations.

##### **Are services responsive?**

We found that this practice was providing responsive care in accordance with the relevant regulations.

##### **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

#### **Background**

South Bank Dental Cares located in the London Borough of Southwark and provides both general private and NHS dental services. The practice also provides minor oral surgery. The opening hours for the practice were Monday, Wednesday and Thursday 9am to 5pm, Tuesday 9am to 7.45pm and Friday 9am to 2pm.

The premises consists of three treatment rooms, a decontamination room and a waiting area.

The practice comprises of a principal dentist, three dentists, three dental nurses, a trainee nurse and a receptionist.

The principal dentist is registered with the Care Quality Commission (CQC) as an individual. Like registered providers, they are 'registered persons'. Registered persons have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated Regulations about how the practice is run.

During the inspection we asked patients to complete CQC comment cards. We received 31 comment cards back from patients and spoke with three patients on the day of the inspection. The patients who provided feedback were positive about the care and treatment they received at the practice. They told us they were involved in all aspects of their care and found the staff to be caring, friendly and helpful and they were treated with care, dignity and respect.

#### **Our key findings were:**

# Summary of findings

- There were effective processes in place to reduce and minimise the risk and spread of infection.
- Patients' needs were assessed and care was planned in line with best practice guidance such as from the National Institute for Health and Care Excellence (NICE). Patients were involved in their care and treatment planning.
- There was appropriate equipment for staff to undertake their duties and equipment was well maintained.
- Staff were trained in and there was appropriate equipment for them to respond to medical emergencies.
- Patients told us that staff were caring and treated them with dignity and respect.
- Patients indicated that they felt they were listened to and that they received good care from a helpful and caring practice team.

- There were processes in place for patients to give their comments and feedback about the service including making complaints and compliments.
- There were good governance arrangements and an effective management structure.

There were areas where the provider could make improvements and should:

- Review the protocols for obtaining and maintaining accurate, complete and detailed records relating to staff employed for the purpose of carrying on the regulated activities, giving due regard to current legislation and guidance.

# Summary of findings

## The five questions we ask about services and what we found

We always ask the following five questions of services.

### Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

There were systems in place to help ensure the safety of staff and patients. These included policies for safeguarding children from abuse, maintaining the required standards of infection prevention and control and maintenance of equipment used at the practice.

The practice assessed risks to patients and managed these well. We found that staff were trained and there was appropriate equipment to respond to medical emergencies. In the event of an incident or accident occurring, the practice had a system in place to document, investigate and learn from it.

The practice followed procedures for the safe recruitment of staff which included carrying out criminal record checks and obtaining references. However improvements could be made in regards to the recording of references.

No action

### Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The practice followed guidance, such as that issued by National Institute for Health and Care Excellence (NICE). Patients were given appropriate information to support them to make decisions about the treatment they received. The practice kept detailed dental care records of treatments carried out and monitored any changes in the patient's' medical and oral health. Records showed patients were given health promotion advice appropriate to their individual oral health needs such as oral health advice.

Staff were supported by the practice in maintaining their continuing professional development (CPD) and were meeting the requirements of their professional registration.

No action

### Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

The patient feedback we received was very positive about the service provided by the practice. We observed that staff treated patients with dignity and respect. We found that dental care records were stored securely, and patient confidentiality was well maintained.

No action

### Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

No action

# Summary of findings

Patients had good access to routine and emergency appointments at the practice. There was sufficient well maintained equipment to meet the dental needs of their patient population. There was a complaints policy. Patients were given the opportunity to give feedback through the practices own feedback forms and the NHS friend and family test. There were arrangements to meet the needs of patients whose first language was not English.

## **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

There was a clear vision for the practice that was shared with the staff. There were good governance arrangements and an effective management structure. Appropriate policies and procedures were in place, and there was effective monitoring of various aspects of care delivery. Patients were given the opportunity to provide feedback about the practice through their own feedback forms.

**No action**

# South Bank Dental Care

## Detailed findings

### Background to this inspection

We carried out this inspection under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. This inspection was planned to check whether the practice was meeting the legal requirements and regulations associated with the Health and Social Care Act 2008.

We carried out an announced comprehensive inspection on 4 July 2016. The inspection was led by a CQC inspector. They were accompanied by a dental specialist advisor.

We received feedback from 34 patients. We also spoke with five members of staff. We reviewed the policies, toured the premises and examined the cleaning and decontamination of dental equipment.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions therefore formed the framework for the areas we looked at during the inspection.

# Are services safe?

## Our findings

### Reporting, learning and improvement from incidents

The practice had suitable processes around reporting and discussion of incidents. We saw there was a system in place for learning from incidents. Staff told us this would mainly be through team meetings if an incident ever occurred. Staff were able to describe the type of incidents that would be recorded and the incident logging process. There had been one adverse incidents over the past 12 months and it had been dealt with appropriately.

Staff we spoke with understood the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 2013 (RIDDOR). Staff were able to describe the type of incidents that would need to be recorded under these requirements. There had been one RIDDOR incident over the past 12 months and it had been dealt with appropriately.

Staff understood the importance of the Duty of Candour and the need to inform the appropriate bodies and patients affected of any relevant incidents [Duty of candour is a requirement under The Health and Social Care Act 2008 (Regulated Activities) Regulations 2014 on a registered person who must act in an open and transparent way with relevant persons in relation to care and treatment provided to service users in carrying on a regulated activity].

### Reliable safety systems and processes (including safeguarding)

One of the dentists was the safeguarding lead and staff knew who they should go to if they had a safeguarding concern. There was a child safeguarding policy that had last been reviewed in September 2015. The practice had details of what should be considered abuse and the practice was aware of the relevant people to contact in the local safeguarding team if they had any safeguarding concerns. Staff had completed safeguarding training that was updated on a regular basis. They were able to explain their understanding of safeguarding issues. There had been no safeguarding incident that needed to be referred to the local safeguarding teams.

The practice had a system in place for receiving and responding to patient safety alerts issued from the Medicines and Healthcare products Regulatory Agency (MHRA). The practice manager told us relevant information would be discussed with staff during team meetings.

The practice had safety systems in place to help ensure the safety of staff and patients. This included for example having a COSHH (Control of Substances Hazardous to Health, 2002 Regulations) file, infection control protocols, procedures for the safe use of sharps, health and safety process, procedures and risk assessments.

Risk assessments had been undertaken for issues affecting the health and safety of staff and patients using the service. This included for example risks associated with radiography, fire, and Legionella, health and safety and infection control.

During our visit we found that the dental care and treatment of patients was planned and delivered in a way that ensured patients' safety and welfare. During the course of our inspection we checked dental care records to confirm the findings. Dental care records contained patient's medical history that was obtained when patients first registered with the practice and was updated when they returned. The dental care records we saw were well structured and contained sufficient detail enabling another dentist to know how to safely treat a patient.

Practice staff showed us a rubber dam kit and told us they used a rubber dam for root canal treatments in line with current guidance. [A rubber dam is a thin, rectangular sheet, usually latex rubber, used in dentistry to isolate the operative site from the rest of the mouth and protect the airway. Rubber dams should be used when endodontic treatment is being provided. On the rare occasions when it is not possible to use rubber dam the reasons should be recorded in the patient's dental care records giving details as to how the patient's safety was assured.]

### Medical emergencies

There were arrangements in place to deal with on-site medical emergencies. Staff had received basic life support training which included cardiopulmonary resuscitation (CPR) training. The practice had a medical emergency kit which included emergency medicines and equipment in line with Resuscitation Council (UK) and British National Formulary guidance. The kit contained the recommended medicines. We checked the medicines that were in the kit and we found that all the medicines were within their expiry date. The emergency equipment included oxygen and an automated external defibrillator (AED), in line with

# Are services safe?

Resuscitation Council UK guidance. (An AED is a portable electronic device that analyses life threatening irregularities of the heart and delivers an electrical shock to attempt to restore a normal heart rhythm).

## Staff recruitment

The practice had a policy for the safe recruitment of staff. In order to reduce the risks of employing unsuitable staff the provider is required to complete a number of checks. They must obtain a full employment history, check the authenticity of qualifications, obtain references, including one from the most recent employer, and complete an up to date Disclosure and Barring Service (DBS) checks. We saw that the provider had satisfactorily carried out the necessary required checks for staff who worked in the practice.

However, we found that improvements could be made in the maintenance of staff records in relation to recording of references obtained for staff. For example we found that no new references had been taken for an employee who had been re-employed by the practice after a two year gap in service. We pointed this out to the practice manager and they advised us that checks on any gaps would be made in the future.

## Monitoring health & safety and responding to risks

The practice had arrangements in place to deal with foreseeable emergencies. A Health and Safety Policy was in place. The practice had a risk management process which was updated and reviewed to ensure the safety of patients and staff members. For example, we saw risk assessments for fire, radiation and infection control. The assessments included the controls and actions to manage risks. For example a September 2015 risk assessment for hepatitis B highlighted the importance of infection control policies.

## Infection control

The practice had an infection control policy that outlined the procedure for issues relating to minimising the risk and spread of infections. This included procedures for hand hygiene, clinical waste management and personal protective equipment. The practice had followed the guidance on decontamination and infection control issued by the Department of Health namely, Health Technical Memorandum 01-05: Decontamination in primary care dental practices.

One of the nurses was the infection control lead. There was a clear flow from dirty to clean areas to minimise the risks of cross contamination. Staff gave a demonstration of the decontamination process which was in line with HTM 01-05 published guidance. This included carrying used instruments in a lidded box from the surgery, cleaning instruments suitably cleaned and using an illuminated magnifying glass to visually check for any remaining contamination (and re-washed if required); placing in the autoclave, pouching and then date stamping.

Staff told us about the daily, weekly and monthly checks that were carried out on equipment used in the practice including the autoclave, to ensure they were working effectively. We saw records that confirmed these checks were carried out.

We saw evidence that staff had been vaccinated against Hepatitis B to protect patients from the risks of contracting the infection. (People who are likely to come into contact with blood products, or are at increased risk of needle-stick injuries should receive these vaccinations to minimise risks of blood borne infections.)

There was a contract in place for the safe disposal of clinical waste and sharps instruments. Clinical waste was stored appropriately and in lockable bins. Bins were collected fortnightly. The bins were appropriately stored safely away from public access while awaiting collection.

The practice was visibly clean and tidy. There were stocks of PPE (personal protective equipment) such as gloves and aprons for both staff and patients. We saw that staff wore appropriate PPE.

A Legionella risk assessment had been completed by an external organisation in June 2015 and the results were negative for bacterium [Legionella is a bacterium found in the environment which can contaminate water systems in buildings].

There was a cleaning plan, schedule and checklist, which was regularly checked by the practice staff. The practice employed a cleaner to carry out the environmental cleaning.

## Equipment and medicines

We found the equipment used in the practice was maintained in accordance with the manufacturer's instructions. This included the equipment used to clean and sterilise the instruments and X-ray equipment.

## Are services safe?

Portable appliance testing (PAT) had been undertaken in November 2015. PAT is the name of a process where electrical appliances are routinely checked for safety. We saw evidence that staff at the practice had undertaken visual checks of electrical appliance on a yearly basis.

The practice had clear guidance regarding the prescribing, recording and stock control of the medicines used in the practice. There were no medicines stored at the practice outside of those found in the medical emergencies kit.

### **Radiography (X-rays)**

The principal dentist was the Radiation Protection Supervisor (RPS). An external organisation covered the role of Radiation Protection Adviser (RPA). The practice kept a radiation protection file in relation to the use and maintenance of X-ray equipment. There were suitable arrangements in place to ensure the safety of the equipment. The local rules relating to the equipment were held in the file and displayed in clinical areas where X-rays were used. Evidence was seen of radiation training for staff undertaking X-rays. X-rays were graded and audited as they were taken. A comprehensive radiograph audit had been carried out in November 2015.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Monitoring and improving outcomes for patients

Patients' needs were assessed and care and treatment was delivered in line with current guidance. This included following the National Institute for Health and Care Excellence (NICE) guidance, for example in regards to recalls. The practice also showed awareness of the Delivering Better Oral Health Tool-kit. ('Delivering better oral health' is an evidence based toolkit used by dental teams for the prevention of dental disease in a primary and secondary care setting).

During the course of our inspection we spoke with three of the dentists and checked dental care records to confirm the findings. We saw evidence of comprehensive, detailed assessments that were individualised. This included having an up to date medical history visit, details of the reason for visit, medical alerts, details of examinations undertaken and treatment plans.

Information about the cost of treatment and some information of treatment options available were on the practice website and the reception area of the practice.

### Health promotion & prevention

Patients' medical histories were updated regularly which included questions about diet. Appropriate advice was provided by staff to patients based on their medical histories. We saw they provided preventive care advice on tooth brushing and oral health. We saw that oral health advice was available on a screen in the reception area and in leaflets kept in the practice waiting area.

### Staffing

Staff told us they had received appropriate professional development and training and the records we saw reflected this. The practice maintained a programme of professional development to ensure that staff were up to date with the latest practices. Examples of staff training included topics such as safeguarding, medical emergencies and infection

control. We reviewed the system in place for recording training that had been attended by staff working within the practice. We also reviewed information about continuing professional development (CPD) and saw there was a system in place to monitor the number of CPD hours staff had completed.

### Working with other services

The practice worked, where appropriate with other professionals in delivering care of their patients. This included for example referrals to hospitals for periodontic and endodontic work. The practice also received referrals from other dentists who referred patients to them for oral surgery. Dental care records we looked at contained details of the referrals made and information that was shared between the practice and the referring organisations. The records showed the practice worked well with other services.

### Consent to care and treatment

Patients who used the service were given appropriate information and support regarding their dental care and treatment. We received feedback from 34 patients. Patients said they were given clear treatment options which were discussed in an easy to understand language by practice staff. Patients understood and consented to treatment. This was confirmed when we checked dental care records and noted evidence that dentists discussed treatment options including risks and benefits, as well as costs with patients.

Staff were aware of how they would support a patient who lacked the capacity to consent to dental treatment. They explained how they would involve the patient and carers to ensure that the best interests of the patient were met. The practice manager received MCA training and ran sessions on the MCA for staff. Staff showed an understanding of the Mental Capacity Act (MCA) 2005. (MCA 2005 provides a legal framework for health and care professionals to act and make decisions on behalf of adults who lack the capacity to make particular decisions for themselves).

# Are services caring?

## Our findings

### **Respect, dignity, compassion & empathy**

We received feedback from 34 patients. The feedback we received was positive. Staff were described as, caring and helpful. Patients said staff treated them with dignity and respect during consultations. We observed staff interaction with patients and saw that staff interacted well with patients, speaking to them in a respectful and considerate manner.

### **Involvement in decisions about care and treatment**

The practice displayed information in the waiting area that gave details of fees. Information was also available on the practice website. We spoke with the principal dentist, two dentists, a nurse, a receptionist and the practice manager on the day of our visit. There was a culture of promoting patient involvement in treatment planning which meant that all staff ensured patients were given clear explanations about treatment. Staff told us that treatments, costs, risks and benefits were discussed with each patient to ensure that patients understood what treatment was available so they were able to make an informed choice.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting patients' needs

The practice had a system in place to schedule enough time to assess and meet patients' needs. Staff told us there was enough time to treat patients, and that patients could generally book an appointment in good time to see a dentist. Feedback from patients confirmed that patients felt they could get appointments when they needed them. There were arrangements in place for out of hours appointments. These arrangements were advertised on the practice telephone answering machine and the practice website.

### Tackling inequity and promoting equality

The practice had recognised the needs of different groups in the planning of its services. They would advise patients who could not speak English to be accompanied by people who could speak English but the practice staff spoke a number of different languages if patients could not bring someone with them. If necessary they would contact an interpreter for them. We saw the practice had patients leaflets in other languages. .

### Access to the service

The opening hours for the practice were Monday, Wednesday and Thursday 9am to 5pm, Tuesday 9am to 7.45pm and Friday 9am to 2pm. We saw there were arrangements for emergency appointments. For example one patient we spoke with had rang for an appointment on the day of the inspection and was seen the same day.

There were out of hours arrangements in place to deal with emergencies that took place when the practice was closed, these were advertised on the practice website.

### Concerns & complaints

The practice had effective arrangements in place for handling complaints and concerns. There was a complaints policy, and information for patients about how to complain was available in the reception area. The policy had last been reviewed in September 2015. There had been seven complaints logged in the last year, and one was still in the process of being investigated. They had been dealt with appropriately. The policy included contact details of two external organisations that patients could contact if they were not happy with the practice's response to a complaint. This included the Dental Complaints Service and the General Dental Council.

# Are services well-led?

## Our findings

### Governance arrangements

The provider had governance arrangements in place for the effective management of the service. This included having a range of policies and procedures in place including health and safety, employment policies and infection control. There was a clear management structure in place with identified staff leading on specific roles such as on infection control and safeguarding. Staff told us they felt supported and were clear about their areas of responsibility.

The practice manager told us regular informal meetings were held to discuss issues in the practice and update on things affecting the practice. Staff we spoke with confirmed that regular meeting took place and we saw notes of these meetings. For example we saw that safeguarding had been discussed during a June 2016 meeting.

The quality audits undertaken at the practice included infection control, dental and radiography audits.

### Leadership, openness and transparency

Staff we spoke with said they felt the owner of the practice was open and transparent. Staff told us they were comfortable about raising concerns with the owners. They felt they were listened to and responded to when they did so. They described the culture encouraged candour, openness and honesty.

The practice was also keen to ensure that all of their staff provided highly-skilled care.

### Learning and improvement

Staff told us they had good access to training. There was a system in place to monitor staff training to ensure essential training was completed each year. Staff working at the practice were supported to maintain their continuing professional development (CPD) as required by the General Dental Council (GDC).

### Practice seeks and acts on feedback from its patients, the public and staff

The practice had gathered feedback from staff and patients through their own surveys, and through the NHS Friends and family test surveys. They also obtained feedback from dentist who referred patients to their minor oral surgery service. We reviewed the NHS Friends and Family data for April and May 2016 and found all the patients said they would be extremely likely or likely to recommend the service. We saw that feedback received from patients on the practices own forms had been analysed and discussed with staff. We saw they had also responded to comments made on the NHS choices website. The majority of the feedback left on the site was positive.

Comments received from external dentists were very positive about the service and we saw that the practice responded to any issues raised by those dentists.
