## Overall summary

### Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Dr Gill on 15 December 2015. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand.

- Patients said they found it easy to make an appointment with a named GP and that there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the Duty of Candour.

The areas where the provider should improve are:

- Ensure the practice records all minutes from staff and multi-disciplinary meetings.

**Professor Steve Field (CBE FRCP FFPH FRCGP)**

Chief Inspector of General Practice

# Summary of findings

## The five questions we ask and what we found

We always ask the following five questions of services.

### Are services safe?

The practice is rated as good for providing safe services.

Good

- There was an effective system in place for reporting and recording significant events.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When there are unintended or unexpected safety incidents, people receive reasonable support, truthful information, a verbal and written apology and are told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep people safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

### Are services effective?

The practice is rated as good for providing effective services.

Good

- Data showed patient outcomes were at or above average for the locality.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with multidisciplinary teams to understand and meet the range and complexity of people's needs.

### Are services caring?

The practice is rated as good for providing caring services.

Good

- Data showed that patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We also saw that staff treated patients with kindness and respect, and maintained confidentiality.

# Summary of findings

## Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- It reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and that there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed that the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

## Are services well-led?

The practice is rated as good for being well-led.

- It had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to this.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

Good

# Summary of findings

## The six population groups and what we found

We always inspect the quality of care for these six population groups.

### Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- It was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.

Good

### People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- The percentage of patients with diabetes, on the register, who have a record of an albumin: creatinine ratio test (The urine albumin test or albumin/creatinine ratio ACR is used to screen people with chronic conditions, such as diabetes) in the preceding 12 months was comparable to the CCG and national average (practice 77%; national 77%).
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check that their health and medicines needs were being met. For those people with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

### Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.

Good

# Summary of findings

- The practice's uptake for the cervical screening programme was 81%, which was comparable to the CCG average of 80% and the national average of 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw good examples of joint working with midwives, health visitors and school nurses.

## Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

Good

## People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- It offered longer appointments for people with a learning disability.
- The practice regularly worked with multi-disciplinary teams in the case management of vulnerable people.
- It had told vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

## People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- < >

Good

# Summary of findings

Performance for mental health related and hypertension indicators was similar to the CCG and national average (practice 85%; national 88%).

- The practice regularly worked with multi-disciplinary teams in the case management of people experiencing poor mental health, including those with dementia.
- It carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- It had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support people with mental health needs and dementia.

# Summary of findings

## What people who use the service say

The national GP patient survey results published on 2 July 2015 for the most recent data showed the practice was performing above the local and national averages. There were 353 surveys distributed with a response of 117 which represent 31% of the practice population who had been asked to complete the national GP survey.

- 92% found it easy to get through to this surgery by phone compared to a CCG average of 72% and a national average of 73%.
- 94% found the receptionists at this surgery helpful (CCG average 84%, national average 87%).
- 88% were able to get an appointment to see or speak to someone the last time they tried (CCG average 80%, national average 85%).
- 95% said the last appointment they got was convenient (CCG average 88%, national average 91%).

- 77% described their experience of making an appointment as good (CCG average 67%, national average 73%).
- 95% usually waited 15 minutes or less after their appointment time to be seen (CCG average 56%, national average 64%).

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 26 comment cards and spoke to 13 patients and three Patient Participation Group (PPG) members who were all positive about the standard of care received. All were complimentary about the practice, staff who worked there and the quality of service and care provided. Patients felt that they were provided with good quality care; they were listened to and had good continuity of care as they normally saw the same GP

## Areas for improvement

### Action the service **SHOULD** take to improve

Ensure the practice records all minutes from staff and multi-disciplinary meetings.

# Dr Parwinder Gill

## Detailed findings

### Our inspection team

#### Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser a practice manager specialist adviser and an Expert by Experience.

## Background to Dr Parwinder Gill

The surgery is located in the London Borough of Hounslow, and provides a general practice service to around 4800 patients from a converted built building.

The practice is registered as a partnership with the Care Quality Commission (CQC) to provide the regulated activities of: treatment of disease, disorder or injury; diagnostic and screening procedures and family planning services; and maternity and midwifery services at one location.

The practice has a Personal Medical Services (PMS) contract and provides a full range of essential, additional and enhanced services including maternity services, child and adult immunisations, family planning, sexual health services and minor surgery.

The practice has one GP partner working eight sessions and three locums GP working a total of eight sessions. There is a good mix of female and male staff. The practice has a part time practice manager; a business manager; the rest of the practice team consists of one a part time practice nurse, one health care assistant and 4 administrative staff consisting of medical secretaries, reception staff, clerks and typist.

The practice is currently open five days a week from 08:00-19:00 on Monday and Tuesday and from 8:00 -18:30 Wednesday-Friday. Consultation times are 08:30 until 11:30 and 15:30 until 18:30. When the practice is closed, the telephone answering service directs patients to contact the out of hours provider.

There were no previous performance issues or concerns about this practice prior to our inspection

## Why we carried out this inspection

We inspected this service as part of our new comprehensive inspection programme.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

## How we carried out this inspection

Before visiting, we reviewed a range of information that we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 15 December 2015. During our visit we:

- Spoke with a range of staff including the GP partner business manager, practice nurse & administrative staff and spoke with patients who used the service.

# Detailed findings

- Observed how people were being cared for and talked with carers and/or family members
- Reviewed the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.'

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services are provided for specific groups of people and what good care looks like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

# Are services safe?

## Our findings

### Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was also a recording form available on the practice's computer system.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports national patient safety alerts and minutes of meetings where these were discussed. Lessons were shared to make sure action was taken to improve safety in the practice. For example, the practice had alerted the local hospital to investigate late patient abnormal results the practice was receiving. The practice staff all knew they had to follow up patient results if they were late to avoid delayed interventions.

When there are unintended or unexpected safety incidents, people received reasonable support, truthful information, a verbal and written apology and are told about any actions to improve processes to prevent the same thing happening again.

### Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep people safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse that reflected relevant legislation and local requirements and policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training relevant to their role. GPs were trained to Safeguarding level 3.
- A notice in the waiting room advised patients that nurses would act as chaperones, if required. All staff who acted as chaperones were trained for the role and had received a disclosure and barring check (DBS

check). (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).

- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency drugs and vaccinations, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing and security). The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Prescription pads were securely stored and there were systems in place to monitor their use. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. The practice had a system for production of Patient Specific Directions to enable Health Care Assistants to administer vaccinations.
- We reviewed eight personnel files and found that appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

### Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were some procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice

## Are services safe?

also had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella.

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure that enough staff were on duty.

•

### **Arrangements to deal with emergencies and major incidents**

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.

- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had oxygen on site but did not have a defibrillator on the premises. On the day of our inspection both the practice manager and the senior GP told us that they had carried out an informal risk assessment and were in the process of purchasing AED. However the day following our inspection we received a formalised risk assessment.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and fit for use.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Effective needs assessment

The practice assessed needs and delivered care in line relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met peoples' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

### Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 97% of the total number of points available, with 4% exception reporting. This practice was an outlier for QOF data relating to

- The ratio of reported versus expected prevalence for Coronary Heart Disease (CHD).
- The ratio of reported versus expected prevalence for Chronic Obstructive Pulmonary Disease (COPD).

The data showed very large variations. The practice were aware of this and had requested the CCG conduct an investigation for them. Following our inspection the practice provided us with further information following the CCG analysis of their data. This exercise identified that 15 patients had been wrongly identified or did not meet the criteria to be on the register and were therefore removed. This left the practice with 10 patients on the register who were correctly identified and receiving all the necessary care and checks.

- The percentage of patients with hypertension having regular blood pressure tests was similar to the CCG and national average. (practice 88%; national 83%)
- Performance for mental health related and hypertension indicators was similar to the CCG and national average (practice 85%; national 88%).
- The dementia diagnosis rate was comparable to the CCG and national average (practice 82%; national 84%).
- The percentage of patients with diabetes, on the register, who have a record of an albumin: creatinine ratio test (The urine albumin test or albumin/creatinine ratio ACR is used to screen people with chronic conditions, such as diabetes) in the preceding 12 months was comparable to the CCG and national average (practice 77%; national 77%).

Clinical audits demonstrated quality improvement.

- There had been two clinical audits completed in the last two years, both of these were completed audits where the improvements made were implemented and monitored.
- The practice participated in applicable local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result included benchmarking for antibiotic prescribing that was in line with current recommendations.

### Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for newly appointed non-clinical members of staff that covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff e.g. for those reviewing patients with long-term conditions, administering vaccinations and taking samples for the cervical screening programme.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet these learning needs and to cover the

# Are services effective?

## (for example, treatment is effective)

scope of their work. This included ongoing support during sessions, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and facilitation and support for the revalidation of doctors. All staff had had an appraisal within the last 12 months.

- Staff received training that included: safeguarding, basic life support and information governance awareness. However the practice had recognised that staff required to have formal fire training as opposed to in-house sessions and had booked this for 6 January 2016. Staff had access to and made use of e-learning training modules and in-house training.

### Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results. Information such as NHS patient information leaflets were also available.
- The practice shared relevant information with other services in a timely way, for example when referring people to other services.

Staff worked together and with other health and social care services to understand and meet the range and complexity of people's needs and to assess and plan ongoing care and treatment. This included when people moved between services, including when they were referred, or after they are discharged from hospital. We saw evidence that multi-disciplinary team meetings took place on a monthly basis and that care plans were routinely reviewed and updated. However the practice did not routinely record discussions and decisions in the minutes of these meetings.

### Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.

When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.

- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, where appropriate, recorded the outcome of the assessment.
- The process for seeking consent was monitored through records audits to ensure it met the practices responsibilities within legislation and followed relevant national guidance.

### Health promotion and prevention

The practice identified patients who may be in need of extra support.

- These included patients in the last 12 months of their lives, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation. Patients were then signposted to the relevant service.
- A dietician was available within the local community and smoking cessation advice was available from a local support group.

The practice had a failsafe system for ensuring results were received for every sample sent as part of the cervical screening programme. The practice's uptake for the cervical screening programme was 81%, which was comparable to the CCG average of 78% and the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 76% to 98% and five year olds from 87% to 98%. Flu vaccination rates for the over 65s were 71%, and at risk groups 36%. These were comparable to CCG and national averages.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and

# Are services effective?

(for example, treatment is effective)

NHS health checks for people aged 40–74. Appropriate follow-ups on the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

# Are services caring?

## Our findings

### Respect, dignity, compassion and empathy

We observed that members of staff were courteous and very helpful to patients and treated people dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations and that conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 26 patient CQC comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We also spoke with three members of the patient participation group. They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was in line with CCG and National averages for most of its satisfaction scores on consultations with doctors and nurses. For example:

- 77% said the GP was good at listening to them compared to the CCG average of 83% and national average of 86%.
- 74% said the GP gave them enough time (CCG average 80%, national average 86%).
- 94% said they had confidence and trust in the last GP they saw (CCG average 92%, national average 95%)
- 70% said the last GP they spoke to was good at treating them with care and concern (CCG average 79%, national average 85%).

- 82% said the last nurse they spoke to was good at treating them with care and concern (CCG average 86%, national average 90%).
- 94% said they found the receptionists at the practice helpful (CCG average 83%, national average 86%)

### Care planning and involvement in decisions about care and treatment

Patients told us that they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback on the comment cards we received was also positive and aligned with these views.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 79% said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 80% and national average of 86%.
- 67% said the last GP they saw was good at involving them in decisions about their care (CCG average 74%, national average 84%)

Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.

### Patient and carer support to cope emotionally with care and treatment

Notices in the patient waiting room told patients how to access a number of support groups and organisations.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified a list of carers and had developed a comprehensive leaflet that provided support information. Written information was also available to direct carers to the various avenues of support available to them.

## Are services caring?

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified.

- The practice offered a late clinic on Monday and Tuesdays evening until 19:00hrs for working patients who could not attend during normal opening hours.
- There were longer appointments available for people with a learning disability.
- Home visits were available for older patients / patients who would benefit from these.
- Same day appointments were available for children and those with serious medical conditions.
- There were disabled facilities and translation services available.
- The practice had been given planning permission and received an improvement grant to build one more consultation room on the ground floor. Therefore improving access for patients.

### Access to the service

The practice is currently open five days a week from 08:00-19:00 on Monday and Tuesday and from 8:00 -18:30 Wednesday-Friday. Consultation times are 08:30 until 11:30 and 15:30 until 18:30. When the practice is closed, the telephone answering service directs patients to contact the out of hours provider. In addition to pre-bookable appointments that could be booked up to four weeks in advance, urgent appointments were also available for people that needed them.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to local and national averages. People told us on the day that they were able to get appointments when they needed them.

- 76% of patients were satisfied with the practice's opening hours compared to the CCG average of 73% and national average of 74%.
- 92% patients said they could get through easily to the surgery by phone (CCG average 71%, national average 73%).
- 77% patients described their experience of making an appointment as good (CCG average 67%, national average 73%).
- 96% patients said they usually waited 15 minutes or less after their appointment time (CCG average 56%, national average 64%).

### Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system. This was included in the practice information leaflet and displayed in the reception area. Patients we spoke with were aware of the process to follow if they wished to make a complaint.

However the practice had not received any formal complaints in the last 12 months. Lessons were learnt from concerns and complaints and action was taken as a result to improve the quality of care where these had been reported in the previous years.

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

## Our findings

### Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

### Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities
- Practice specific policies were implemented and were available to all staff. However we noted that the practice was in the process of ensuring that all policies were specific and adapted to reflect their practice.
- A comprehensive understanding of the performance of the practice
- A programme of continuous clinical and internal audit which is used to monitor quality and to make improvements
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions

### Leadership, openness and transparency

The partners in the practice have the experience, capacity and capability to run the practice and ensure high quality care. They prioritise safe, high quality and compassionate care. The partners were visible in the practice and staff told us that they were approachable and always take the time to listen to all members of staff.

The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents

When there were unexpected or unintended safety incidents:

- the practice gives affected people reasonable support, truthful information and a verbal and written apology
- They kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us that the practice held regular team meetings though improvements were required in the recording of these minutes.
- Staff told us that there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and confident in doing so and felt supported if they did. We also noted that the team held recreational away days for birthdays and special occasions as part of their team building.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

### Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- It had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. There was an active PPG which met on a regular basis, carried out patient surveys and submitted proposals for improvements to the practice management team. For example, the PPG had identified the need to ensure the online appointments booking system was simple to use.

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

- The practice had also gathered feedback from staff through staff meetings, appraisals and discussion. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

## Continuous improvement

There was a strong focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area. The GP partner worked closely with other practices in the area to share how they had improved patient access as they had the lowest number of patients who were accessing accident and emergency service as well as the out of hours services.
