# Byways Dental Practice

## Inspection Report

The Forge  
Checkendon  
Reading  
RG8 0SP

Telephone: 01491 680412

Website: [www.bywaysdental.co.uk](http://www.bywaysdental.co.uk)

Date of inspection visit: 17/06/2019

Date of publication: 04/07/2019

### Overall summary

We carried out this announced inspection on 17th June 2019 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

#### **Our findings were:**

##### **Are services safe?**

We found that this practice was providing safe care in accordance with the relevant regulations.

##### **Are services effective?**

We found that this practice was providing effective care in accordance with the relevant regulations.

##### **Are services caring?**

We found that this practice was providing caring services in accordance with the relevant regulations.

##### **Are services responsive?**

We found that this practice was providing responsive care in accordance with the relevant regulations.

##### **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

##### **Background**

Byways Dental Practice is in Checkendon and provides NHS and private treatment to patients of all ages.

There is level access for people who use wheelchairs and those with pushchairs. Car parking spaces, including a parking space for blue badge holders, are available outside the practice.

The dental team includes two dentists, one trainee dental nurse, two dental hygienists, two receptionists and a practice manager who is also a qualified nurse. The practice has three treatment rooms.

# Summary of findings

The practice is owned by an organisation and as a condition of registration must have a person registered with the Care Quality Commission as the registered manager. Registered managers have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run. The registered manager at Byways Dental Practice was the principal dentist.

On the day of our inspection we collected 85 CQC comment cards filled in by patients and spoke with 13 other patients.

During the inspection we spoke with two dentists, one trainee dental nurses, one dental hygienist, one receptionist and the practice manager. We looked at practice policies and procedures and other records about how the service is managed.

## **The practice is open:**

- Monday 8.00am - 6.30pm
- Tuesday 8.00am - 4.30pm
- Wednesday 8.00am - 4.30pm
- Thursday 8.00am - 7.00pm
- Friday 8.00am - 2.00pm
- Saturday closed
- Sunday closed

## **Our key findings were:**

- The practice appeared clean and well maintained.
- The practice had infection control procedures.
- Staff knew how to deal with emergencies.
- The practice had systems to help them manage risk.
- The practice had suitable safeguarding processes and staff knew their responsibilities for safeguarding adults and children.
- The practice had thorough staff recruitment procedures.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- The practice was providing preventive care and supporting patients to ensure better oral health.
- The appointment system met patients' needs.
- The practice had effective leadership and culture of continuous improvement.
- Staff felt involved and supported and worked well as a team.
- The practice asked staff and patients for feedback about the services they provided.
- The practice dealt with complaints positively and efficiently.
- The practice had suitable information governance arrangements.

# Summary of findings

## The five questions we ask about services and what we found

We always ask the following five questions of services.

### Are services safe?

The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.

Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns.

Staff were qualified for their roles and the practice completed essential recruitment checks.

Premises and equipment appeared clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments but improvements were needed to the frequency of infection control audits. We have since been provided evidence to confirm this oversight has been addressed.

The practice had suitable arrangements for dealing with medical and other emergencies. Improvements were needed to ensure the availability of emergency equipment. We have since received evidence to confirm his shortfall has been addressed.

No action

### Are services effective?

The dentists assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the treatment they received as efficient, helpful and caring. The dentists discussed treatment with patients, so they could give informed consent and recorded this in their records.

The practice did not carry out audits of patient care records for the hygienists and implantologist to check that necessary information was recorded. We have since received evidence to confirm his shortfall has been addressed.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The practice supported staff to complete training relevant to their roles and had systems to help them monitor this.

No action

### Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from 98 people. Patients were positive about all aspects of the service the practice provided. They told us staff were kind, respectful and patient.

They said that they were given clear explanations, offered multiple options and said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

No action

# Summary of findings

## Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice's appointment system was efficient and met patients' needs. Patients could get an appointment quickly if in pain.

Staff considered patients' different needs. This included providing facilities for disabled patients and families with children. The practice had access to telephone interpreter services and had arrangements to help patients with sight or hearing loss.

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

No action

## Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and staff felt supported and appreciated.

The practice team kept complete patient dental care records which were, clearly typed and stored securely.

The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

No action

# Are services safe?

## Our findings

### **Safety systems and processes including staff recruitment, Equipment & premises and Radiography (X-rays)**

The practice had clear systems to keep patients safe.

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns, including notification to the CQC.

There was a system to highlight vulnerable patients on records e.g. children with child protection plans, adults where there were safeguarding concerns, people with a learning disability or a mental health condition, or who require other support such as with mobility or communication.

The practice also had a system to identify adults that were in other vulnerable situations e.g. those who were known to have experienced modern-day slavery.

The practice had a whistleblowing policy. Staff told us they felt confident they could raise concerns without fear of reprimand.

The dentists used rubber dams in line with guidance from the British Endodontic Society when providing root canal treatment. In instances where the rubber dam was not used, such as for example refusal by the patient, and where other methods were used to protect the airway, this was suitably documented in the dental care record and a risk assessment completed.

The practice had a business continuity plan describing how the practice would deal with events that could disrupt the normal running of the practice.

The practice had a staff recruitment policy and procedure to help them employ suitable staff and also had checks in place for agency and locum staff. These reflected the relevant legislation. We looked at three staff recruitment records. These showed the practice followed their recruitment procedure.

We noted that clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

The practice ensured that facilities and equipment were safe and that equipment was maintained according to manufacturers' instructions, including electrical and gas appliances.

Records showed that fire detection equipment, such as smoke detectors and emergency lighting, were regularly tested and firefighting equipment, such as fire extinguishers, were regularly serviced.

The practice had suitable arrangements to ensure the safety of the X-ray equipment. They met current radiation regulations and had the required information in their radiation protection file.

We saw evidence that the dentists justified, graded and reported on the radiographs they took. The practice carried out radiography audits every year following current guidance and legislation.

Clinical staff completed continuing professional development (CPD) in respect of dental radiography.

### **Risks to patients**

There were systems to assess, monitor and manage risks to patient safety.

The practice's health and safety policies, procedures and risk assessments were up to date and reviewed regularly to help manage potential risk. The practice had current employer's liability insurance.

We looked at the practice's arrangements for safe dental care and treatment. The staff followed relevant safety regulation when using needles and other sharp dental items. A sharps risk assessment had been undertaken and was updated annually.

The provider had a system in place to ensure clinical staff had received appropriate vaccinations, including the vaccination to protect them against the Hepatitis B virus, and that the effectiveness of the vaccination was checked.

Staff knew how to respond to a medical emergency and completed training in emergency resuscitation and basic life support (BLS) every year.

# Are services safe?

The oxygen cylinder available was not the recommended capacity of 460 litres. Several pieces of emergency equipment were missing from the emergency bag. These pieces of equipment have since been located and an oxygen cylinder of the recommended size purchased.

A dental nurse worked with the dentists when they treated patients in line with GDC Standards for the Dental Team. A risk assessment was in place for when the dental hygienist worked without chairside support.

The provider had suitable risk assessments to minimise the risk that can be caused from substances that are hazardous to health.

The practice occasionally used agency staff. We were told staff received an induction to ensure that they were familiar with the practice's procedures, but records of induction were not kept. We have since received evidence to confirm his shortfall has been addressed.

The practice had an infection prevention and control policy and procedures. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM01-05) published by the Department of Health. Staff completed infection prevention and control training and received updates as required.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM01-05. The records showed equipment used by staff for cleaning and sterilising instruments were validated, maintained and used in line with the manufacturers' guidance.

The practice carried out manual cleaning of instruments before they were sterilised. We wish to note that whilst manual cleaning meets the national cleaning standard it is the least effective recognised cleaning method as it is the hardest to validate. It also carries an increased risk of sharps injury.

The practice had in place systems and protocols to ensure that any dental laboratory work was disinfected prior to being sent to a dental laboratory and before the dental laboratory work was fitted in a patient's mouth.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water

systems, in line with a risk assessment. All recommendations had been actioned and records of water testing and dental unit water line management were in place.

We saw cleaning schedules for the premises. The practice appeared to be clean when we inspected, and patients confirmed that this was usual.

The practice had policies and procedures in place to ensure clinical waste was segregated and stored appropriately in line with guidance.

The practice carried out infection prevention and control audits. The latest audit was overdue. The practice assured us they would address this as soon as practicably possible. We have since received evidence to confirm his shortfall has been addressed.

## **Information to deliver safe care and treatment**

Staff had the information they needed to deliver safe care and treatment to patients.

We discussed with the dentist how information to deliver safe care and treatment was handled and recorded. We looked at a sample of dental care records to confirm our findings and noted that individual records were written and managed in a way that kept patients safe. Dental care records we saw were accurate, complete, and legible and were kept securely and complied with General Data Protection Regulation (GDPR) requirements.

Patient referrals to other service providers contained specific information which allowed appropriate and timely referrals in line with practice protocols and current guidance.

## **Safe and appropriate use of medicines**

The practice had reliable systems for appropriate and safe handling of medicines.

There was a suitable stock control system of medicines which were held on site. This ensured that medicines did not pass their expiry date and enough medicines were available if required.

The practice stored and kept records of NHS prescriptions as described in current guidance.

The dentists were aware of current guidance with regards to prescribing medicines.

# Are services safe?

Antimicrobial prescribing audits were carried out. The most recent audit demonstrated the dentists were following current guidelines.

## **Track record on safety**

The practice had a good safety record.

There were comprehensive risk assessments in relation to safety issues. The practice had systems in place to monitor and review incidents to help them to understand risks and give a clear, accurate and current picture that would lead to safety improvements.

In the previous 12 months there had been no safety incidents.

## **Lessons learned and improvements**

The practice learned and made improvements when things went wrong.

The staff were aware of the Serious Incident Framework and recorded, responded to and discussed all incidents to reduce risk and support future learning in line with the framework.

There was a system for receiving and acting on safety alerts. The practice learned from external safety events as well as patient and medicine safety alerts.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Effective needs assessment, care and treatment

The practice had systems to keep dental practitioners up to date with current evidence-based practice. We saw that clinicians assessed needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

### Dental implants

The practice offered dental implants. These were placed by a visiting specialist who had undergone appropriate post-graduate training in this speciality. The provision of dental implants was in accordance with national guidance.

### Helping patients to live healthier lives

The practice was providing preventive care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists told us they prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children based on an assessment of the risk of tooth decay.

The dentists told us that where applicable they discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

The practice was aware of national oral health campaigns and local schemes available in supporting patients to live healthier lives. For example, local stop smoking services.

We spoke with the dentist who described to us the procedures they used to improve the outcome of periodontal treatment. This involved preventative advice, taking plaque and gum bleeding scores and detailed charts of the patient's gum condition

Patients with more severe gum disease were recalled at more frequent intervals to review their compliance and to reinforce home care preventative advice.

### Consent to care and treatment

The practice obtained consent to care and treatment in line with legislation and guidance.

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentists told us they gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to Gillick competence, by which a child under the age of 16 years of age can consent for themselves. The staff were aware of the need to consider this when treating young people under 16 years of age.

Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

### Monitoring care and treatment

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentists assessed patients' treatment needs in line with recognised guidance.

We saw that the dentists audited patients' dental care records to check that they recorded the necessary information. We noted audits were not carried out for the hygienists and visiting implantologist. We have since received evidence to confirm his shortfall has been addressed.

### Effective staffing

Staff had the skills, knowledge and experience to carry out their roles.

Staff new to the practice had a period of induction based on a structured induction programme. We confirmed clinical staff completed the continuing professional development required for their registration with the General Dental Council.

Staff told us they discussed training needs at annual appraisals. We saw evidence of completed appraisals and how the practice addressed the training requirements of staff.

# Are services effective?

(for example, treatment is effective)

## **Co-ordinating care and treatment**

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

Dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide.

The practice had systems and processes to identify, manage, follow up and where required refer patients for specialist care when presenting with bacterial infections.

The practice also had systems and processes for referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist.

The practice monitored all referrals to make sure they were dealt with promptly.

# Are services caring?

## Our findings

### **Kindness, respect and compassion**

Staff treated patients with kindness, respect and compassion

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were caring and gentle. We saw that staff treated patients respectfully, appropriately and kindly and were friendly towards patients at the reception desk and over the telephone.

Patients said staff were compassionate and understanding and they told us they could choose whether they saw a male or female dentist.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

Information, patient feedback results were available for patients to read.

### **Privacy and dignity**

The practice respected and promoted patients' privacy and dignity.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided privacy when reception staff were dealing with patients. Staff told us that if a patient asked for more

privacy they would take them into another room. The reception computer screens were not visible to patients and staff did not leave patients' personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

### **Involving people in decisions about care and treatment**

Staff helped patients be involved in decisions about their care and were aware of the requirements under the Equality Act (a requirement to make sure that patients and their carers can access and understand the information they are given):

Interpretation services were available for patients who did not have English as a first language.

The practice gave patients clear information to help them make informed choices. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them. A dentist described the conversations they had with patients to satisfy themselves they understood their treatment options.

The practice's website provided patients with information about the range of treatments available at the practice.

The dentists described to us the methods they used to help patients understand treatment options discussed. These included for example, photographs, models, X-ray images and an intra-oral camera.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

Staff were clear on the importance of emotional support needed by patients when delivering care.

Patients described high levels of satisfaction with the responsive service provided by the practice.

Staff told us that they currently had some patients for whom they needed to make adjustments to enable them to receive treatment.

The practice had made reasonable adjustments for disabled patients. This included step free access, a hearing loop, a magnifying electronic pad to record consent, medical history update and service feedback, an accessible toilet with hand rails and a call bell. A Disability Access audit had been completed and an action plan formulated in order to continually improve access for patients.

Staff told us that they telephoned some older patients on the morning of their appointment to make sure they could get to the practice.

### Timely access to services

Patients were able to access care and treatment from the practice within an acceptable timescale for their needs.

The practice displayed its opening hours in the premises, included it in their practice information leaflet and on their website.

The practice had an efficient appointment system to respond to patients' needs. Staff told us that patients who requested an urgent appointment were seen the same day.

Patients told us they had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

They took part in an emergency on-call arrangement with the 111 out of hours service.

The practice website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

### Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint.

The practice manager was responsible for dealing with these. Staff told us they would tell the practice manager about any formal or informal comments or concerns straight away so patients received a quick response.

The practice manager told us they aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received. Information for patients showed that a complaint would be acknowledged within three days and investigated within a reasonable time.

These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

# Are services well-led?

## Our findings

### Leadership capacity and capability

Leaders had the capacity and skills to deliver high-quality, sustainable care and had the experience, capacity and skills to deliver the practice strategy and address risks to it.

They were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.

Leaders at all levels were visible and approachable. They worked closely with staff and others to make sure they prioritised compassionate and inclusive leadership.

The practice had effective processes to develop leadership capacity and skills, including planning for the future leadership of the practice.

### Vision and strategy

There was a clear vision and set of values. The practice had a realistic strategy and supporting business plans to achieve priorities.

### Culture

The practice had a culture of high-quality sustainable care.

Staff stated they felt respected, supported and valued. They were proud to work in the practice.

The practice focused on the needs of patients.

Leaders and the practice manager acted on behaviour and performance inconsistent with the vision and values.

Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the Duty of Candour.

Staff we spoke with told us they were able to raise concerns and were encouraged to do so. They had confidence that these would be addressed.

### Governance and management

There were clear responsibilities, roles and systems of accountability to support good governance and management.

The principal dentists had overall responsibility for the clinical leadership of the practice. The practice manager was responsible for the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities.

The provider had a system of clinical governance in place which included policies, protocols and procedures that were accessible to all members of staff and were reviewed on a regular basis.

There were clear and effective processes for managing risks, issues and performance.

### Appropriate and accurate information

The practice acted on appropriate and accurate information.

Quality and operational information was used to ensure and improve performance. Performance information was combined with the views of patients.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

### Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

The practice used continuous feedback to obtain staff and patients' views about the service. We saw examples of suggestions from patients/staff the practice had acted on. As a result of patient feedback, the practice reviewed the reading material in the waiting room.

The practice gathered feedback from staff through meetings, surveys, and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on. As a result of staff feedback, the practice updated the patient consent form.

### Continuous improvement and innovation

There were systems and processes for learning, continuous improvement and innovation.

The practice had quality assurance processes to encourage learning and continuous improvement. These included

## Are services well-led?

audits of dental care records, radiographs and infection prevention and control. They had clear records of the results of these audits and the resulting action plans and improvements.

The principal dentists showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff.

The whole team, with the exception of the visiting specialist had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

Staff told us they completed 'highly recommended' training as per General Dental Council professional standards. This included undertaking medical emergencies and basic life support training annually.

The General Dental Council also requires clinical staff to complete continuing professional development. Staff told us the practice provided support and encouragement for them to do so.
