Tel: 08444 773031

Date of inspection visit: 7 January 2015
Date of publication: 17/12/2015

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Hockley Farm Medical Practice on 7 January 2015.

Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- Urgent appointments were available the same day.
- The practice had good facilities including disabled access and was found to be clean and tidy.
- Information about services and how to complain was available.
- Patients said they felt the practice offered an excellent service and staff were friendly and caring and treated them with dignity and respect
- There were systems in place to reduce risks to patient safety for example, infection control procedures.

- Patients' needs were assessed and care was planned and delivered following best practice guidance.
- Staff had received training appropriate to their roles.
- Recruitment checks were carried out and the appropriate recruitment checks had been undertaken prior to employment.
- The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage.
- Staff understood and fulfilled their responsibilities to raise concerns and report incidents and near misses.

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Professor Steve Field (CBE FRCP FFPH FRCGP)

Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services. Staff understood and fulfilled their responsibilities to raise concerns, and to report incidents and near misses. Lessons were learned and communicated widely to support improvement. Information about safety was recorded, monitored, appropriately reviewed and addressed. Risks to patients were assessed and well managed. There were enough staff to keep people safe.

Good

Are services effective?

The practice is rated as good for providing effective services. Data showed patient outcomes were at or above average for the locality. Staff referred to guidance from NICE and used it routinely. People's needs were assessed and care was planned and delivered in line with current legislation. This included assessing capacity and promoting good health. Staff had received training appropriate to their roles and any further training needs have been identified and planned. The practice could identify all appraisals and the personal development plans for all staff. Staff worked with multidisciplinary teams.

Good

Are services caring?

The practice is rated as good for providing caring services. Data showed that patients rated the practice higher than others for several aspects of care. Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment. Information to help patients understand the services available was easy to understand. We also saw that staff treated patients with kindness and respect, and maintained confidentiality.

Good

Are services responsive to people's needs?

The practice is rated as good for providing responsive services. It reviewed the needs of its local population and engaged with the NHS Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. Patients said they found it easy to make an appointment with a named GP and that there was continuity of care, with urgent appointments available the same day.

Good

Summary of findings

The practice had good facilities and was well equipped to treat patients and meet their needs. Information about how to complain was available and easy to understand and evidence showed that the practice responded quickly to issues raised. Learning from complaints with staff and other stakeholders.

Are services well-led?

The practice is rated as good for being well-led. It had a clear vision and strategy. Staff were clear about the vision and their responsibilities in relation to this. There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings. There were systems in place to monitor and improve quality and identify risk. The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group (PPG) was active. Staff had received inductions, regular performance reviews and attended staff meetings and events.

Good

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as good for the care of older people. Nationally reported data showed that outcomes for patients were good for conditions commonly found in older people. The practice offered proactive, personalised care to meet the needs of the older people in its population and had a range of enhanced services, for example, in dementia and end of life care. It was responsive to the needs of older people, and offered home visits and rapid access appointments for those with enhanced needs.

Good

People with long term conditions

The practice is rated as good for the care of people with long-term conditions. There were emergency processes in place and referrals were made for patients whose health deteriorated suddenly. Longer appointments and home visits were available when needed. All these patients had a named GP and a structured annual review to check that their health and medication needs were being met. For those people with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

Families, children and young people

The practice is rated as good for the care of families, children and young people. There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations. Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this. Appointments were available outside of school hours and the premises were suitable for children and babies. We saw good examples of joint working with midwives, health visitors and school nurses. Emergency processes were in place and referrals were made for children and pregnant women whose health deteriorated suddenly.

Good

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students). The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered

Good

Summary of findings

to ensure these were accessible, flexible and offered continuity of care. The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable. The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability. It had carried out annual health checks for people with a learning disability and 95% of these patients had received a follow-up. It offered longer appointments for people with a learning disability.

The practice regularly worked with multi-disciplinary teams in the case management of vulnerable people. It had told vulnerable patients about how to access various support groups and voluntary organisations. Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia). The practice regularly worked with multi-disciplinary teams in the case management of people experiencing poor mental health, including those with dementia. It carried out advance care planning for patients with dementia.

The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.

Good

Summary of findings

What people who use the service say

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 50 comment cards which were all positive about the standard of care received. Patients told us that the staff were caring and friendly, respectful and professional and that they felt listened to. They said that the staff were knowledgeable and approachable and received an all-round excellent service.

On the day of the inspection we spoke with six patients that also gave positive feedback and said that they were able to get an appointment on the day if needed.

We also spoke with care homes that used the service for some of their residents and they told us that they had a good relationship with the practice and found the staff to be very good, always come to see patients on the same day and that the reception staff are good and polite.

Hockley Farm Medical Practice

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP.

Background to Hockley Farm Medical Practice

Hockley Farm Medical Practice is a partnership practice in a purpose built building. The practice list size is approximately 10,000 patients.

The practice area covers the Braunstone area of Leicester.

The practice is a GP training practice. The practice consisted of three partners; five salaried GPs, four practice nurses, two minor illness nurses (one trainee), two health care assistants, one phlebotomist and one advanced care planner as well as administrative support staff. The practice had one registrar. GP Registrars are fully qualified doctors who already have experience of hospital medicines and gain valuable experience by being based within the practice. They work full-time in the practice for a period of four or 12 months dependent upon the stage of training they are at.

The surgery is open from 8.30 am until 6.00 pm Monday to Friday. Appointments are available from 8.30am to 11am and from 2pm Monday and Wednesdays, 2.30pm Tuesdays and 3pm on Thursdays until 5.30 pm. Friday afternoon appointments are from 3pm to 5pm.

The practice lies within the Leicester City CCG area. A CCG is an organisation that brings together local GPs and experienced health professionals to take on commissioning responsibilities for local health services.

The practice has a PMS contract.

The practice had not previously been inspected by the Care Quality Commission.

Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. This inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?

Detailed findings

- Is it well-led?

We also looked at how well services are provided for specific groups of people and what good care looks like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable

- People experiencing poor mental health (including people with dementia)

The inspector :-

- Reviewed information available to us from other organisations e.g. NHS England.
- Reviewed information from CQC intelligent monitoring systems.
- Carried out an announced inspection visit on 7 January 2015.
- Spoke to staff, patients and residential care homes in the area.
- Reviewed patient survey information.
- Reviewed the practice's policies and procedures.

Are services safe?

Our findings

Safe track record

The practice used a range of information to identify risks and improve patient safety. For example, reported incidents and national patient safety alerts as well as comments and complaints received from patients. The staff we spoke to were aware of their responsibilities to raise concerns, and knew how to report incidents and near misses.

We reviewed safety records, incident reports and minutes of meetings where these were discussed. This showed the practice had managed these consistently over time and so could show evidence of a safe track record over the long term.

Every significant event was highlighted on a form which was sent to the practice manager and then reviewed with the senior partner. Once learning was identified it was decided which of the meetings it would be best to go to. Clinical Governance is a standing agenda item at clinical meetings, which significant events would fall into.

Learning and improvement from safety incidents

The practice had a system in place for reporting, recording and monitoring significant events, incidents and accidents. There were records of significant events that had occurred and we were able to review these. There was evidence that the practice had learned from these and that the findings were shared with relevant staff. Staff, including receptionists, administrators and nursing staff, knew how to raise an issue for consideration at the meetings and they felt encouraged to do so.

Staff used incident forms on the practice intranet and sent completed forms to the practice manager. She showed us the system she used to manage and monitor incidents. There had been no significant events recorded in the previous 12 months, however we saw that processes were in place for these to be recorded and investigated appropriately.

Reliable safety systems and processes including safeguarding

The practice had systems to manage and review risks to vulnerable children, young people and adults. We looked at training records which showed that all staff had received relevant role specific training on safeguarding. We asked members of medical, nursing and administrative staff

about their most recent training. Staff knew how to recognise signs of abuse in older people, vulnerable adults and children. They were also aware of their responsibilities and knew how to share information, properly record documentation of safeguarding concerns and how to contact the relevant agencies in working hours and out of normal hours. Contact details were easily accessible.

The senior partner was the lead in safeguarding vulnerable adults and children. They had been trained and could demonstrate they had the necessary training to enable them to fulfil this role. All staff we spoke to were aware who these leads were and who to speak to in the practice if they had a safeguarding concern.

There was a system to highlight vulnerable patients on the practice's electronic records. This included information to make staff aware of any relevant issues when patients attended appointments; for example children subject to child protection plans. Although there is not the ability to flag vulnerable adults in this manner, notes are added on the front page of a patient's record .

There was a chaperone policy, which was visible on the waiting room noticeboard and in consulting rooms. All nursing staff, including health care assistants, had been trained to be a chaperone. If nursing staff were not available to act as a chaperone, all of the receptionists had also undertaken training and understood their responsibilities when acting as chaperones, including where to stand to be able to observe the examination.

A member of staff, has the lists that come through from every month for IMS. There was a system for persistent non-attenders. Letters and text messages are sent in advance to remind patients of their appointment. The practice goes through the previous two months to identify who hasn't attended. Reminder letters and text messages are sent if patients do not turn up.

Annual medication reviews looked that everything was ok. System of notifying people for medication reviews, if they don't attend then prescriptions are changed to two weekly rather than monthly. A nurse will carry out annual reviews with patients with long term conditions and task GPs if need be for further advice.

Medicines management

We checked medicines stored in the treatment rooms and medicine refrigerators and found they were stored securely and were only accessible to authorised staff. There was a

Are services safe?

clear policy for ensuring that medicines were kept at the required temperatures, which described the action to take in the event of a potential failure. The practice staff followed the policy.

Processes were in place to check medicines were within their expiry date and suitable for use. All the medicines we checked were within their expiry dates. Expired and unwanted medicines were disposed of in line with waste regulations.

The nurses and the health care assistant administered vaccines using directions that had been produced in line with legal requirements and national guidance. We saw up-to-date copies of both sets of directions and evidence that nurses and the health care assistant had received appropriate training to administer vaccines. A member of the nursing staff was qualified as an independent prescriber and she received regular supervision and support in her role as well as updates in the specific clinical areas of expertise for which she prescribed.

All prescriptions were reviewed and signed by a GP before they were given to the patient. Blank prescription forms were handled in accordance with national guidance as these were tracked through the practice and kept securely at all times.

Cleanliness and infection control

We observed the premises to be clean and tidy. We saw there were cleaning schedules in place and cleaning records were kept. Patients we spoke with told us they always found the practice clean and had no concerns about cleanliness or infection control.

The practice had a lead for infection control who had undertaken further training to enable them to provide advice on the practice infection control policy and carry out staff training. All staff received induction training about infection control specific to their role and received annual updates. We saw evidence that the lead had carried out audits for each of the last three years and that any improvements identified for action were completed on time. Minutes of practice meetings showed that the findings of the audits were discussed.

An infection control policy and supporting procedures were available for staff to refer to, which enabled them to plan and implement measures to control infection. For example, personal protective equipment including disposable

gloves, aprons and coverings were available for staff to use and staff were able to describe how they would use these to comply with the practice's infection control policy. There was also a policy for needle stick injury.

Notices about hand hygiene techniques were displayed in staff and patient toilets. Hand washing sinks with hand soap, hand gel and hand towel dispensers were available in treatment rooms.

The practice had a policy for the management, testing and investigation of legionella (a germ found in the environment which can contaminate water systems in buildings). We saw records that confirmed the practice was carrying out regular checks in line with this policy to reduce the risk of infection to staff and patients.

Equipment

Staff we spoke with told us they had equipment to enable them to carry out diagnostic examinations, assessments and treatments. They told us that all equipment was tested and maintained regularly and we saw equipment maintenance logs and other records that confirmed this. All portable electrical equipment was routinely tested and displayed stickers indicating the last testing date. A schedule of testing was in place. PAT testing was carried out annually. Equipment was calibrated at the same time as PAT testing.

Staffing and recruitment

Records we looked at contained evidence that appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and criminal records checks through the Disclosure and Barring Service (DBS). The practice had a recruitment policy that set out the standards it followed when recruiting clinical and non-clinical staff.

Staff told us about the arrangements for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. We saw there was a rota system in place for all the different staffing groups to ensure that enough staff were on duty. There was also an arrangement in place for members of staff, including nursing and administrative staff, to cover each other's annual leave. Newly appointed staff had this expectation written in their contracts.

Staff told us there were usually enough staff to maintain the smooth running of the practice and there were always

Are services safe?

enough staff on duty to keep patients safe. The practice manager showed us records to demonstrate that actual staffing levels and skill mix were in line with planned staffing requirements.

Monitoring safety and responding to risk

The practice had systems, processes and policies in place to manage and monitor risks to patients, staff and visitors to the practice. These included annual and monthly checks of the building, the environment, medicines management, staffing, dealing with emergencies and equipment. The practice also had a health and safety policy. Health and safety information was displayed for staff to see and there was an identified health and safety representative. Annual walkround carried out by office manager. This is going to be done with a PPG member as one is a former health and safety manager from a local hospital. This is documented. When infection control audits are carried out, this is also looked at.

Identified risks were included on a risk log. Each risk was assessed and rated and mitigating actions recorded to reduce and manage the risk. We saw that any risks were discussed at GP partners' meetings and within team meetings. For example, the practice manager had shared the recent findings from an infection control audit with the team.

We saw that staff were able to identify and respond to changing risks to patients including deteriorating health and well-being or medical emergencies. For example:

- There were emergency processes in place for patients with long-term conditions. Staff gave us examples of referrals made for patients whose health deteriorated suddenly.
- There were emergency processes in place for identifying acutely ill children and young people and staff gave us examples of referrals made.
- Emergency processes were in place for acute pregnancy complications.
- Staff gave examples of how they responded to patients experiencing a mental health crisis, including supporting them to access emergency care and treatment.

- The practice monitored repeat prescribing for people receiving medication for mental ill-health.

Arrangements to deal with emergencies and major incidents

The practice had arrangements in place to manage emergencies. Records showed that all staff had received training in basic life support. Emergency equipment was available including access to oxygen and an automated external defibrillator (used to attempt to restart a person's heart in an emergency). When we asked members of staff, they all knew the location of this equipment and records confirmed that it was checked regularly. The notes of the practice's significant event meetings showed that staff had discussed a medical emergency concerning a patient and that practice had learned from this appropriately.

Emergency medicines were available in a secure area of the practice and all staff knew of their location. These included those for the treatment of cardiac arrest, anaphylaxis and hypoglycaemia. We were assured that a full risk assessment had been undertaken and a protocol was in place to manage this. Processes were also in place to check whether emergency medicines were within their expiry date and suitable for use. All the medicines we checked were in date and fit for use.

A business continuity plan was in place to deal with a range of emergencies that may impact on the daily operation of the practice. Each risk was rated and mitigating actions recorded to reduce and manage the risk. Risks identified included power failure, adverse weather, unplanned sickness and access to the building. The document also contained relevant contact details for staff to refer to. For example, contact details of a heating company to contact if the heating system failed.

The practice had carried out a fire risk assessment that included actions required to maintain fire safety. Records showed that staff were up to date with fire training and that they practised regular fire drills.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The GPs and nursing staff we spoke with could clearly outline the rationale for their approaches to treatment. They were familiar with current best practice guidance, and accessed guidelines from the National Institute for Health and Care Excellence and from local commissioners. We saw minutes of practice meetings where new guidelines were disseminated, the implications for the practice's performance and patients were discussed and required actions agreed. The staff we spoke with and the evidence we reviewed confirmed that these actions were designed to ensure that each patient received support to achieve the best health outcome for them. We found from our discussions with the GPs and nurses that staff completed thorough assessments of patients' needs in line with NICE guidelines, and these were reviewed when appropriate.

The GPs told us they lead in specialist clinical areas such as diabetes, heart disease and asthma and the practice nurses supported this work, which allowed the practice to focus on specific conditions. Clinical staff we spoke with were very open about asking for and providing colleagues with advice and support. For example, GPs told us this supported all staff to continually review and discuss new best practice guidelines for the management of respiratory disorders. Our review of the clinical meeting minutes confirmed that this happened.

The senior GP partner showed us data from the local CCG of the practice's performance for antibiotic prescribing, which was comparable to similar practices.

We saw minutes from meetings where regular reviews of elective and urgent referrals were made, and that improvements to practice were shared with all clinical staff.

We saw no evidence of discrimination when making care and treatment decisions. Interviews with GPs showed that the culture in the practice was that patients were referred on need and that age, sex and race was not taken into account in this decision-making.

Management, monitoring and improving outcomes for people

Staff across the practice had key roles in monitoring and improving outcomes for patients. These roles included data input, scheduling clinical reviews, and managing child

protection alerts and medicines management. The information staff collected was then collated by the practice manager and deputy practice manager to support the practice to carry out clinical audits.

The practice showed us seven clinical audits that had been undertaken in the last 12 months. All of these were completed audits where the practice was able to demonstrate the changes resulting since the initial audit, such as a review of treatment for patients with heart failure or atrial fibrillation.

The GPs told us clinical audits were often linked to medicines management information, safety alerts or as a result of information from the quality and outcomes framework (QOF). QOF is a national performance measurement tool. GPs maintained records showing how they had evaluated the service and documented the success of any changes.

The team was making use of clinical audit tools, clinical supervision and staff meetings to assess the performance of clinical staff. The staff we spoke with discussed how, as a group, they reflected on the outcomes being achieved and areas where this could be improved. Staff spoke positively about the culture in the practice around audit and quality improvement, noting that there was an expectation that all clinical staff should undertake at least one audit a year.

There was a protocol for repeat prescribing which was in line with national guidance. In line with this, staff regularly checked that patients receiving repeat prescriptions had been reviewed by the GP. They also checked that all routine health checks were completed for long-term conditions such as diabetes and that the latest prescribing guidance was being used. The IT system flagged up relevant medicines alerts when the GP was prescribing medicines. We saw evidence to confirm that, after receiving an alert, the GPs had reviewed the use of the medicine in question and, where they continued to prescribe it, outlined the reason why they decided this was necessary. The evidence we saw confirmed that the GPs had oversight and a good understanding of best treatment for each patient's needs.

Effective staffing

Practice staffing included medical, nursing, managerial and administrative staff. We reviewed staff training records and saw that all staff were up to date with attending mandatory courses such as annual basic life support. All GPs were up to date with their yearly continuing professional

Are services effective?

(for example, treatment is effective)

development requirements and all either have been revalidated or had a date for revalidation. (Every GP is appraised annually, and undertakes a fuller assessment called revalidation every five years. Only when revalidation has been confirmed by NHS England can the GP continue to practise and remain on the performers list with the General Medical Council).

All staff undertook annual appraisals that identified learning needs from which action plans were documented. Our interviews with staff confirmed that the practice was proactive in providing training and funding for relevant courses. As the practice was a training practice, doctors who were training to be qualified as GPs were offered extended appointments and had access to a senior GP throughout the day for support. We received positive feedback from the trainee we spoke with.

Working with colleagues and other services

The practice worked with other service providers to meet people's needs and manage complex cases. It received blood test results, X ray results, and letters from the local hospital including discharge summaries, out-of-hours GP services and the 111 service both electronically (majority) and by post. The practice had a policy outlining the responsibilities of all relevant staff in passing on, reading and acting on any issues arising from communications with other care providers on the day they were received. First thing in the morning out of hours tasks were completed before moving on to other tasks. The GP who saw these documents and results was responsible for the action required. All staff we spoke with understood their roles and felt the system in place worked well. There were no instances within the last year of any results or discharge summaries that were not followed up appropriately.

The practice was commissioned for the new enhanced service and had a process in place to follow up patients discharged from hospital. (Enhanced services require an enhanced level of service provision above what is normally required under the core GP contract). We saw that the policy for actioning hospital communications was working well in this respect. The practice undertook a yearly audit of follow-ups to ensure inappropriate follow-ups were documented and that no follow-ups were missed.

The practice held multidisciplinary team meetings to discuss the needs of complex patients, for example those with end of life care needs or children on the at risk register. These meetings were attended by district nurses, social

workers, palliative care nurses and decisions about care planning were documented in a shared care record. Staff felt this system worked well and remarked on the usefulness of the forum as a means of sharing important information.

Information sharing

The practice used several electronic systems to communicate with other providers. For example, there was a shared system with the local GP out-of-hours provider to enable patient data to be shared in a secure and timely manner. Electronic systems were also in place for making referrals through the Choose and Book system. (The Choose and Book system enables patients to choose which hospital they will be seen in and to book their own outpatient appointments in discussion with their chosen hospital). Staff reported that this system was easy to use.

For emergency patients, there was a policy of providing a printed copy of a summary record for the patient to take with them to A&E. One GP showed us how straightforward this task was using the electronic patient record system, and highlighted the importance of this communication with A&E. The practice has also signed up to the electronic Summary Care Record and this is fully implemented, with new requests coming in regularly. (Summary Care Records provide faster access to key clinical information for healthcare staff treating patients in an emergency or out of normal hours).

The practice had systems to provide staff with the information they needed. Staff used an electronic patient record to coordinate, document and manage patients' care. All staff were fully trained on the system, and commented positively about the system's safety and ease of use. This software enabled scanned paper communications, such as those from hospital, to be saved in the system for future reference. We saw evidence that audits had been carried out to assess the completeness of these records and that action had been taken to address any shortcomings identified.

Consent to care and treatment

We found that staff were aware of the Mental Capacity Act 2005, the Children Acts 1989 and 2004 and their duties in fulfilling it. All the clinical staff we spoke to understood the key parts of the legislation and were able to describe how they implemented it in their practice. For some specific scenarios where capacity to make decisions was an issue for a patient, the practice had drawn up a policy to help

Are services effective?

(for example, treatment is effective)

staff, for example with making do not attempt resuscitation orders. This policy highlighted how patients should be supported to make their own decisions and how these should be documented in the medical notes.

Patients with a learning disability and those with dementia were supported to make decisions through the use of care plans, which they were involved in agreeing. These care plans were reviewed annually (or more frequently if changes in clinical circumstances dictated it) and had a section stating the patient's preferences for treatment and decisions. When interviewed, staff gave examples of how a patient's best interests were taken into account if a patient did not have capacity to make a decision. All clinical staff demonstrated a clear understanding of Gillick competencies. (These help clinicians to identify children aged under 16 who have the legal capacity to consent to medical examination and treatment).

Health promotion and prevention

The practice had met with the Public Health team from the local authority and the CCG to discuss the implications and share information about the needs of the practice population identified by the Joint Strategic Needs Assessment (JSNA). The JSNA pulls together information about the health and social care needs of the local area. This information was used to help focus health promotion activity.

It was practice policy to offer a health check with the health care assistant / practice nurse to all new patients

registering with the practice. The GP was informed of all health concerns detected and these were followed up in a timely way. We noted a culture among the GPs to use their contact with patients to help maintain or improve mental, physical health and wellbeing. For example, by offering opportunistic chlamydia screening to patients aged 18-25 and offering smoking cessation advice to smokers.

The practice also offered NHS Health Checks to all its patients aged 40-75. A GP showed us how patients were followed up if they had risk factors for disease identified at the health check and how they scheduled further investigations.

The practice had numerous ways of identifying patients who needed additional support, and it was pro-active in offering additional help. For example, the practice kept a register of all patients with a learning disability and they were offered an annual physical health check. The practice had also identified the smoking status of patients over the age of 16 and actively offered nurse-led smoking cessation clinics to these patients.

The practice offered a full range of immunisations for children, travel vaccines and flu vaccinations in line with current national guidance. Last year's performance for all immunisations was above average for the CCG, and again there was a clear policy for following up non-attenders by the named practice nurse.

Are services caring?

Our findings

Respect, dignity, compassion and empathy

We reviewed the most recent data available for the practice on patient satisfaction. This included information from the national patient survey, a survey of patients undertaken by the practice's patient participation group (PPG) and patient satisfaction questionnaires sent out to patients by each of the practice's partners. The evidence from all these sources showed patients were satisfied with how they were treated and that this was with compassion, dignity and respect. For example, data from the national patient survey showed the practice was rated 'among the best' for patients who rated the practice as good or very good.

Patients completed CQC comment cards to tell us what they thought about the practice. We received 50 completed cards and the majority were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were efficient, helpful and caring. They said staff treated them with dignity and respect. We also spoke with six patients on the day of our inspection. All told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected.

Staff and patients told us that all consultations and treatments were carried out in the privacy of a consulting room. Disposable curtains were provided in consulting rooms and treatment rooms so that patients' privacy and dignity was maintained during examinations, investigations and treatments. We noted that consultation / treatment room doors were closed during consultations and that conversations taking place in these rooms could not be overheard.

We saw that staff were careful to follow the practice's confidentiality policy when discussing patients' treatments so that confidential information was kept private. The practice switchboard was located away from the reception desk and was shielded by glass partitions which helped keep patient information private. In response to patient and staff suggestions, a system had been introduced to allow only one patient at a time to approach the reception desk. This prevented patients overhearing potentially private conversations between patients and reception staff. We saw this system in operation during our inspection and noted that it enabled confidentiality to be maintained.

Staff told us that if they had any concerns or observed any instances of discriminatory behaviour or where patients' privacy and dignity was not being respected, they would raise these with the practice manager. The practice manager told us she would investigate these and any learning identified would be shared with staff. We were shown an example of a report on a recent incident that showed the actions taken had been robust. There was also evidence of learning taking place as staff meeting minutes showed this has been discussed.

There was a clearly visible notice in the patient reception area stating the practice's zero tolerance for abusive behaviour. Receptionists told us that referring to this had helped them diffuse potentially difficult situations.

Care planning and involvement in decisions about care and treatment

The patient survey information we reviewed showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment and generally rated the practice well in these areas. The results from the practice's own satisfaction survey showed that patients said they were sufficiently involved in making decisions about their care.

Patients we spoke to on the day of our inspection told us that health issues were discussed with them and they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment they wished to receive. Patient feedback on the comment cards we received was also positive and aligned with these views.

Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.

Patient/carer support to cope emotionally with care and treatment

The survey information we reviewed showed patients were positive about the emotional support provided by the practice and rated it well in this area. The patients we spoke to on the day of our inspection and the comment

Are services caring?

cards we received were also consistent with this survey information. For example, these highlighted that staff responded compassionately when they needed help and provided support when required.

Notices in the patient waiting room, on the TV screen and patient website also told people how to access a number of support groups and organisations. The practice's computer

system alerted GPs if a patient was also a carer. We were shown the written information available for carers to ensure they understood the various avenues of support available to them such as Dementia cafes, Easybreathe, NHS Choices, various mental health workers and drug/alcohol advisors, Exercise on referral, Contraception and sexual health advice.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

We found the practice was responsive to people's needs and had systems in place to maintain the level of service provided. The needs of the practice population were understood and systems were in place to address identified needs in the way services were delivered.

The NHS Area Team and Clinical Commissioning Group (CCG) told us that the practice engaged regularly with them and other practices to discuss local needs and service improvements that needed to be prioritised. We saw minutes of meetings where this had been discussed and actions agreed to implement service improvements and manage delivery challenges to its population.

Tackling inequity and promoting equality

The practice had recognised the needs of different groups in the planning of its services.

The practice had access to online and telephone translation services.

The practice provided equality and diversity training through e-learning. Staff we spoke with confirmed that they had completed the equality and diversity training in the last 12 months and that equality and diversity was regularly discussed at staff appraisals and team events.

The premises and services had been adapted to meet the needs of people with disabilities with open spaces, automatic opening doors, wide corridors and ground floor treatment rooms.

We saw that the waiting area was large enough to accommodate patients with wheelchairs and prams and allowed for easy access to the treatment and consultation rooms. Accessible toilet facilities were available for all patients attending the practice including baby changing facilities.

People whose circumstances may make them vulnerable. Register of people who may be living in vulnerable circumstances, system for flagging vulnerability in individual records, people are easily able to register with the practice, including those with "no fixed abode" care of the practice's address, people not registered at the practice are able to access appointments through drop in services available and system to communicate with people of "no fixed abode"

Access to the service

Appointments were available daily. There were also arrangements to ensure patients received urgent medical assistance when the practice was closed. If patients called the practice when it was closed, an answerphone message gave the telephone number they should ring depending on the circumstances. Information on the out-of-hours service was provided to patients.

Longer appointments were also available for people who needed them and those with long-term conditions. This also included appointments with a named GP or nurse. Home visits were made to local care homes, by a named GP and to those patients who needed one. Late evening slots are 15 minutes, minor illness 15 minutes. Double appointments are offered when requested if appropriate.

Patients were generally satisfied with the appointments system and commented how it had been improved. They confirmed that they could see a doctor on the same day if they needed to and they could see another doctor if there was a wait to see the doctor of their choice. Comments received from patients showed that patients in urgent need of treatment had often been able to make appointments on the same day of contacting the practice.

Older people and people with long-term conditions – home visits are available where needed and longer appointments when needed.

Appointments available outside of school hours for children and young people, suitable premises for children and young people and joint working with sexual health clinics.

Understanding of student population and working age population and services reflect this and extended opening hours. Online booking system available and easy to use, text message reminder for appointments and test results, online or telephone consultations where appropriate, support to enable people to return to work.

Partnership working to understand the needs of the most vulnerable in the practice population, local health authority public health department, longer appointments for those that need them, flexible services and appointments, including for example, avoiding booking.

Mental health needs of the practice population including within hard to reach groups is monitored and informs

Are services responsive to people's needs?

(for example, to feedback?)

service provision, longer appointments for those that need them, flexible services and appointments, including for example, avoiding booking appointments at busy times for people who may find this stressful.

Listening and learning from concerns and complaints

The practice had a system in place for handling complaints and concerns. Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England. There was a designated responsible person who handled all complaints in the practice.

We saw that information was available to help patients understand the complaints system. Patients we spoke with were aware of the process to follow if they wished to make a complaint. None of the patients we spoke with had ever needed to make a complaint about the practice.

The practice reviewed complaints annually to detect themes or trends. We looked at the report for the last review and no themes had been identified. However, lessons learned from individual complaints had been acted on.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients. We found details of the vision and practice values were part of the practice's strategy and five year business plan.

We spoke with seven members of staff and they all knew and understood the vision and values and knew what their responsibilities were in relation to these.

Governance arrangements

The practice had a number of policies and procedures in place to govern activity and these were available to staff on the desktop on any computer within the practice. We looked at 10 of these policies and procedures and most staff had completed a cover sheet to confirm that they had read the policy and when. All 10 policies and procedures we looked at had been reviewed annually and were up to date.

There was a clear leadership structure with named members of staff in lead roles. For example, there was a lead nurse for infection control and the senior partner was the lead for safeguarding. We spoke with seven members of staff and they were all clear about their own roles and responsibilities. They all told us they felt valued, well supported and knew who to go to in the practice with any concerns.

The practice used the Quality and Outcomes Framework (QOF) to measure its performance. The QOF data for this practice showed it was performing in line with national standards. We saw that QOF data was regularly discussed at monthly team meetings and action plans were produced to maintain or improve outcomes.

The practice had an ongoing programme of clinical audits which it used to monitor quality and systems to identify where action should be taken.

The practice had robust arrangements for identifying, recording and managing risks.

The practice held governance meetings. We looked at minutes from the last three meetings and found that performance, quality and risks had been discussed.

Leadership, openness and transparency

We saw from minutes that team meetings were held regularly, at least monthly. Staff told us that there was an open culture within the practice and they had the opportunity and were happy to raise issues at team meetings. We also noted that team away days were held every six months.

The practice manager was responsible for human resource policies and procedures. We reviewed a number of policies during the inspection.

Seeking and acting on feedback from patients, public and staff

We looked at the results of the annual patient survey and 72% of patients agreed telephone consultations would be useful. We saw as a result of this the practice had introduced telephone consultation appointments. We reviewed a report on comments from patients between January and June 2014, which had a common theme of the waiting room not being very inviting or comfortable. The practice manager showed us improvements that had been made to the waiting area, which included new chairs and redecoration. The practice uses information from the Friends and family test, NHS Choices (the practice manager responds to all comments), through the PPG (PPG also has a virtual PPG for 'younger' members).

The practice had an active patient participation group (PPG) which has steadily increased in size. The PPG had carried out surveys and met regularly. The practice manager showed us the analysis of the last patient survey, which was considered in conjunction with the PPG. The results and actions agreed from these surveys are available on the practice website.

Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. One member of staff told us that they had asked for specific training around chaperoning at the staff away day and this had happened. Staff told us they felt involved and engaged in the practice to improve outcomes for both staff and patients.

The practice had a whistleblowing policy which was available to all staff in the Clinical Governance folder and electronically on any computer within the practice.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Management lead through learning and improvement

Staff told us that the practice supported them to maintain their clinical professional development through training and mentoring. We looked at five staff files and saw that

regular appraisals took place which included a personal development plan. Staff told us that the practice was very supportive of training and that they had staff away days where guest speakers and trainers attended.

The practice was a GP training practice.
