

## Brandling Park Dental Practice

# Brandling Park Dental Practice

### Inspection Report

6 Brandling Park  
Newcastle Upon Tyne  
Tyne And Wear  
NE2 4QA  
Tel: 01912811470  
Website: [www.aesdent.com](http://www.aesdent.com)

Date of inspection visit: 2 Jul 2019  
Date of publication: 22/07/2019

### Overall summary

We carried out this announced inspection on 2 July 2019 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

#### **Our findings were:**

#### **Are services safe?**

We found that this practice was providing safe care in accordance with the relevant regulations.

#### **Are services effective?**

We found that this practice was providing effective care in accordance with the relevant regulations.

#### **Are services caring?**

We found that this practice was providing caring services in accordance with the relevant regulations.

#### **Are services responsive?**

We found that this practice was providing responsive care in accordance with the relevant regulations.

#### **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

#### **Background**

Brandling Park Dental Practice is in Newcastle Upon Tyne and provides private treatment to adults and children.

The practice occupies the ground floor of a building. There are steps at the front entrance, with hand rails to aid people who need support and a portable ramp for people who use wheelchairs or those with pushchairs.

# Summary of findings

Car parking spaces are available near the practice; these are restricted to permit-holders. The provider has parking permits for patients to use for the duration of their treatment.

The dental team includes a principal dentist, a visiting implantologist, three dental nurses, one dental hygienist and one dental therapist. The dental therapist oversees the practice management and governance systems. The practice has two treatment rooms.

The practice is owned by a partnership between the principal dentist and dental therapist and as a condition of registration must have a person registered with the Care Quality Commission as the registered manager. Registered managers have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run. The registered manager at Brandling Park Dental Practice is the principal dentist.

On the day of inspection, we collected 20 CQC comment cards filled in by patients. These provided a positive view of the care provided by the practice.

During the inspection we spoke with the principal dentist, three dental nurses and the dental therapist / practice manager. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open:

Monday 8.30am-7.00pm

Tuesday, Wednesday and Friday 8.30am-5.00pm

Thursday 8.30am-1.30pm

## **Our key findings were:**

- The practice appeared clean and well maintained.
- The provider had infection control procedures which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The provider had systems to help them manage risk to patients and staff.
- The provider had suitable safeguarding processes and staff knew their responsibilities for safeguarding vulnerable adults and children.

- The provider had thorough staff recruitment procedures.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- Staff provided preventive care and supporting patients to ensure better oral health.
- The appointment system took account of patients' needs.
- The provider had effective leadership and culture of continuous improvement.
- Staff felt involved and supported and worked well as a team.
- The provider asked staff and patients for feedback about the services they provided.
- The provider dealt with complaints positively and efficiently.
- The provider had suitable information governance arrangements.

There were areas where the provider could make improvements. They should:

- Review the practice's policy for the control and storage of substances hazardous to health identified by the Control of Substances Hazardous to Health Regulations 2002, to ensure risk assessments are undertaken for all hazardous substances in the practice.
- Review the practice's protocols for ensuring that all clinical staff have adequate immunity for vaccine preventable infectious diseases.
- Review the practice's arrangements for receiving and responding to patient safety alerts, recalls and rapid response reports issued by the Medicines and Healthcare products Regulatory Agency, the Central Alerting System and other relevant bodies, such as Public Health England.
- Review the practice's systems for assessing, monitoring and mitigating the various risks arising from the undertaking of the regulated activities. In particular, risk assess the need for the dental hygienist to work without chairside support.

# Summary of findings

## The five questions we ask about services and what we found

We always ask the following five questions of services.

<b>Are services safe?</b>	<b>No action</b>	✓
<b>Are services effective?</b>	<b>No action</b>	✓
<b>Are services caring?</b>	<b>No action</b>	✓
<b>Are services responsive to people's needs?</b>	<b>No action</b>	✓
<b>Are services well-led?</b>	<b>No action</b>	✓

# Are services safe?

## Our findings

We found that this practice was providing safe care in accordance with the relevant regulations.

### **Safety systems and processes, including staff recruitment, equipment and premises and radiography (X-rays)**

Staff had clear systems to keep patients safe.

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The provider had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns, including notification to the CQC.

The provider had a system to highlight vulnerable patients and patients who required other support such as with mobility or communication within dental care records.

The provider also had a system to identify adults that were in other vulnerable situations e.g. those who were known to have experienced modern-day slavery or female genital mutilation.

The provider had a whistleblowing policy. Staff felt confident they could raise concerns without fear of recrimination.

The dentists used dental dams in line with guidance from the British Endodontic Society when providing root canal treatment. In instances where the dental dam was not used, such as for example refusal by the patient, and where other methods were used to protect the airway, we saw this was documented in the dental care record and a risk assessment completed.

The provider had a business continuity plan describing how they would deal with events that could disrupt the normal running of the practice.

The provider had a recruitment policy and procedure to help them employ suitable staff and had checks in place for agency and locum staff. These reflected the relevant legislation. We looked at two staff recruitment records. These showed the provider followed their recruitment procedure.

We noted that clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

Staff ensured that facilities and equipment were safe, and that equipment was maintained according to manufacturers' instructions, including electrical and gas appliances.

The provider had undertaken a fire risk assessment of the premises. We noted this did not take into consideration the steps at the rear fire exit which some patient groups could find difficult in evacuation procedures. They assured us they would seek advice in relation to this. Records showed that fire detection and firefighting equipment were regularly tested and serviced.

The practice had suitable arrangements to ensure the safety of the X-ray equipment and we saw the required information was in their radiation protection file.

We saw evidence that the dentists justified, graded and reported on the radiographs they took. The provider carried out radiography audits every year following current guidance and legislation.

Clinical staff completed continuing professional development (CPD) in respect of dental radiography.

### **Risks to patients**

There were systems to assess, monitor and manage risks to patient safety.

The practice's health and safety policies, procedures and risk assessments were reviewed regularly to help manage potential risk. The provider had current employer's liability insurance.

We looked at the practice's arrangements for safe dental care and treatment. The staff followed relevant safety regulation when using needles and other sharp dental items. A sharps risk assessment had been undertaken and was updated annually. We discussed the precautions that dental nurses should undertake when removing used matrix bands. The provider assured us they would review their systems in relation to this.

The provider had a system in place to ensure clinical staff had received appropriate vaccinations, including the vaccination to protect them against the Hepatitis B virus however for two members of staff they did not have any evidence that the effectiveness of the vaccination was

# Are services safe?

checked. The practice manager assured us they would review their protocols and we saw staff took appropriate action on the inspection day by arranging for blood tests and completing risk assessments.

Staff knew how to respond to a medical emergency and completed training in emergency resuscitation and basic life support (BLS) every year.

Emergency equipment and medicines were available as described in recognised guidance. We found staff kept records of their checks of these to make sure these were available, within their expiry date, and in working order. We noted the Glucagon medicine (for diabetic emergencies) was stored in the fridge and the temperatures were checked weekly, rather than daily. A log was implemented on the inspection day.

A dental nurse worked with the dentists and the dental therapists when they treated patients in line with General Dental Council (GDC) Standards for the Dental Team. A risk assessment was not in place for when the dental hygienist worked without chairside support. The practice manager assured us this would be carried out following the inspection.

There were suitable numbers of dental instruments available for the clinical staff and measures were in place to ensure they were decontaminated and sterilised appropriately.

The provider had some suitable risk assessments to minimise the risk that can be caused from substances that are hazardous to health. The provider assured us they would complete risk assessments for all other hazardous substances on site, in line with the Control of Substances Hazardous to Health (COSHH) Regulations 2002.

The provider had an infection prevention and control policy and procedures. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM 01-05) published by the Department of Health and Social Care. Staff completed infection prevention and control training and received updates as required.

The provider had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM 01-05. The records showed equipment used by staff for cleaning and sterilising instruments was validated, maintained and used in line with the

manufacturers' guidance. We found there could be improvements made to the ventilation within the decontamination room and discussed this with the provider. They confirmed a plan would be introduced to address this.

We found staff had systems in place to ensure that any work was disinfected prior to being sent to a dental laboratory and before treatment was completed.

We saw staff had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment. All recommendations had been actioned and records of water testing and dental unit water line management were in place.

We saw cleaning schedules for the premises. The practice was visibly clean when we inspected.

The provider had policies and procedures in place to ensure clinical waste was segregated and stored appropriately in line with guidance.

The provider carried out infection prevention and control audits twice a year. The latest audit showed the practice was meeting the required standards.

## **Information to deliver safe care and treatment**

Staff had the information they needed to deliver safe care and treatment to patients.

We discussed with the dentist how information to deliver safe care and treatment was handled and recorded. We looked at a sample of dental care records to confirm our findings and noted that individual records were written and managed in a way that kept patients safe. Dental care records we saw were complete, legible, were kept securely and complied with General Data Protection Regulation (GDPR) requirements.

Patient referrals to other service providers contained specific information which allowed appropriate and timely referrals in line with practice protocols and current guidance.

## **Safe and appropriate use of medicines**

The provider had reliable systems for appropriate and safe handling of medicines.

## Are services safe?

There was a suitable stock control system of medicines which were held on site. This ensured that medicines did not pass their expiry date and enough medicines were available if required.

We saw staff stored and kept records of prescriptions as described in current guidance.

The dentists were aware of current guidance with regards to prescribing medicines.

### **Track record on safety and Lessons learned and improvements**

There were comprehensive risk assessments in relation to safety issues. Staff monitored and reviewed incidents. This helped staff to understand risks, give a clear, accurate and current picture that led to safety improvements.

In the previous 12 months there had been no safety incidents.

There were adequate systems for reviewing and investigating when things went wrong. The practice learned, and shared lessons identified themes and acted to improve safety in the practice.

There was a system for receiving and acting on safety alerts. Staff learned from external safety events as well as patient and medicine safety alerts. We saw they were shared with the team and acted upon if required. We found the practice had not been receiving, and were unaware of, all recent relevant safety alerts. We spoke with the practice manager about reviewing their registration for safety alerts to ensure all alerts are received. They also assured us they would check previous alerts and recalls to see if any affected their practice.

# Are services effective?

(for example, treatment is effective)

## Our findings

We found that this practice was providing effective care in accordance with the relevant regulations.

### **Effective needs assessment, care and treatment**

The practice had systems to keep dental practitioners up to date with current evidence-based practice. We saw that clinicians assessed patients' needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

The practice offered dental implants. These were placed by the principal dentist and a visiting clinician who had undergone appropriate post-graduate training in this speciality. The provision of dental implants was in accordance with national guidance.

The staff were involved in quality improvement initiatives including informal peer review as part of their approach in providing high quality care.

### **Helping patients to live healthier lives**

The practice was providing preventive care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for patients based on an assessment of the risk of tooth decay.

The dental professionals, where applicable, discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

Staff were aware of national oral health campaigns and local schemes in supporting patients to live healthier lives. For example, local stop smoking services. They directed patients to these schemes when necessary and information was available in a folder in the waiting room.

The dentist described to us the procedures they used to improve the outcomes for patients with gum disease. This involved providing patients preventative advice, taking plaque and gum bleeding scores and recording detailed charts of the patient's gum condition

Records showed patients with more severe gum disease were recalled at more frequent intervals for review and to reinforce home care preventative advice.

### **Consent to care and treatment**

Staff obtained consent to care and treatment in line with legislation and guidance.

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentist gave patients information about treatment options and the risks and benefits of these, so they could make informed decisions and we saw this documented in-patient records. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who might not be able to make informed decisions. The policy also referred to Gillick competence, by which a child under the age of 16 years of age may give consent for themselves. Staff were aware of the need to consider this when treating young people under 16 years of age.

Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

### **Monitoring care and treatment**

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentists assessed patients' treatment needs in line with recognised guidance.

We saw the practice audited patients' dental care records to check that the dentists/clinicians recorded the necessary information.

### **Effective staffing**

Staff had the skills, knowledge and experience to carry out their roles. The principal dentist had undergone dental implant training and a dental nurse was trained in taking impressions for patients.

Staff new to the practice had a period of induction based on a structured programme. We confirmed clinical staff completed the continuing professional development required for their registration with the General Dental Council.

# Are services effective?

(for example, treatment is effective)

Staff discussed their training needs at annual appraisals and during clinical supervision. We saw evidence of completed appraisals and how the practice addressed the training requirements of staff.

## **Co-ordinating care and treatment**

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

The dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide.

Staff had systems to identify, manage, follow up and where required refer patients for specialist care when presenting with dental infections. Sepsis awareness was evident amongst staff, including it's importance in relation to implant provision.

The provider also had systems for referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist.

Staff monitored all referrals to make sure they were dealt with promptly.

# Are services caring?

## Our findings

We found that this practice was providing caring services in accordance with the relevant regulations.

### **Kindness, respect and compassion**

Staff treated patients with kindness, respect and compassion.

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were polite, friendly and professional. We saw that staff treated patients respectfully, appropriately and kindly and were friendly towards patients at the reception desk and over the telephone.

Patients said staff were compassionate and understanding.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

Information folders, patient survey results and thank you cards were available for patients to read.

### **Privacy and dignity**

Staff respected and promoted patients' privacy and dignity.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided privacy when reception staff were dealing with patients. If a patient asked for more privacy, staff would take them into another room. The reception computer screens were not visible to patients and staff did not leave patients' personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

### **Involving people in decisions about care and treatment**

Staff helped patients to be involved in decisions about their care and were aware of the

requirements under the Equality Act.

We saw:

- Interpretation services were available for patients who did speak or understand English. We saw notices in the reception areas and were told there was little need in the area.
- Staff communicated with patients in a way that they could understand, and communication aids and easy read materials were available. We saw magnifying glasses were available at reception and large print information leaflets were in the patient folder.

Staff helped patients and their carers find further information and access community and advocacy services. They helped them ask questions about their care and treatment. Information was available for patients in the waiting room, for example stop smoking services.

Staff gave patients clear information to help them make informed choices about their treatment. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them. A dentist described the conversations they had with patients to satisfy themselves they understood their treatment options.

The practice's website and information leaflet provided patients with information about the range of treatments available at the practice.

The dentist described to us the methods they used to help patients understand treatment options discussed. These included for example photographs, models and X-ray images.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

We found that this practice was providing responsive care in accordance with the relevant regulations.

### Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

Staff were clear on the importance of emotional support needed by patients when delivering care.

The practice met the needs of more vulnerable patients, for example, by arranging appointments at times convenient to the patient and ensuring a sufficient appointment length was provided. For example, for patients with dental phobia, appointments were offered where waiting time would be kept to an absolute minimum. Any vulnerable people, for example, those with learning difficulties and any patients with dementia or other long-term conditions, continuity of care was prioritised, double or treble appointment slots were booked and patient records were annotated to ensure patient preferences were recorded.

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice currently had some patients for whom they needed to make adjustments to enable them to receive treatment.

A disability access assessment was in place and detailed how the practice would consider various patient's needs. The practice had made reasonable adjustments for patients with disabilities. These included

- A portable ramp for the entrance.
- Hand rails at the entrance and alongside any steps in the corridor.
- Ground floor treatment rooms.
- A toilet large enough to accommodate a wheelchair.
- Induction hearing loop.

### Timely access to services

Patients could access care and treatment from the practice within an acceptable timescale for their needs.

The practice displayed its opening hours in the premises and included it in their information leaflet and on their website.

The practice had an appointment system to respond to patients' needs. Patients who requested an urgent appointment were seen the same day. Patients had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

The staff took part in an emergency on-call arrangement with some other local practices and also provided their mobile phone number to patients.

The practice's website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

### Listening and learning from concerns and complaints

The provider took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

The provider had a policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint.

The provider was responsible for dealing with these. Staff would tell the provider about any formal or informal comments or concerns straight away so patients received a quick response.

The provider aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the provider had dealt with their concerns.

We looked at comments, compliments and complaints the practice received.

These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

# Are services well-led?

## Our findings

We found that this practice was providing well-led care in accordance with the relevant regulations.

### Leadership capacity and capability

We found the partners had the capacity and skills to deliver high-quality, sustainable care. The partners had the experience, capacity and skills to deliver the practice strategy and address risks to it.

The partners were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.

Leaders at all levels were visible and approachable. Staff told us they worked closely with them and others to make sure they prioritised compassionate and inclusive leadership.

We saw the provider had effective processes to develop leadership capacity and skills, including planning for the future leadership of the practice.

### Culture

The practice had a culture of high-quality sustainable care.

Staff stated they felt respected, supported and valued. They were proud to work in the practice.

The staff focused on the needs of patients.

We saw the provider took effective action to deal with staff poor performance.

Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the Duty of Candour.

Staff could raise concerns and were encouraged to do so, and they had confidence that these would be addressed.

### Governance and management

There were clear responsibilities, roles and systems of accountability to support good governance and management.

The partners had overall responsibility for the management and clinical leadership of the practice and were also responsible for the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities.

The provider had a system of clinical governance in place which included policies, protocols and procedures that were accessible to all members of staff and were reviewed on a regular basis.

We saw there were clear and effective processes for managing risks, issues and performance.

### Appropriate and accurate information

Staff acted on appropriate and accurate information.

Quality and operational information was used to ensure and improve performance. Performance information was combined with the views of patients.

The provider had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

### Engagement with patients, the public, staff and external partners

Staff involved patients, the public, staff and external partners to support high-quality sustainable services.

The provider used patient surveys, comment books and verbal comments to obtain staff and patients' views about the service. We saw examples of suggestions the practice had acted on, including providing a heater in the waiting room for the winter months and parking permits for patients.

The provider gathered feedback from staff through meetings, surveys, and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on.

### Continuous improvement and innovation

There were systems and processes for learning, continuous improvement and innovation.

The provider had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records, radiographs and infection

## Are services well-led?

prevention and control. They had clear records of the results of these audits and the resulting action plans and improvements. Audit cycles were displayed at reception to remind staff when these were due.

The partners showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff. A training matrix was displayed on the notice board, for staff to regularly review and update. The partners had a system to monitor the matrix and review original certificates every few months.

The whole staff team had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

Staff completed 'highly recommended' training as per General Dental Council professional standards. This included undertaking medical emergencies and basic life support training annually. The provider supported and encouraged staff to complete CPD, including by providing subscription to an on-line dental CPD package for the entire dental team.
