

# Chiswick Family Doctors Practice

## Quality Report

Chiswick Health Centre  
Fishers Lane  
W4 1RX

Tel: 020 8630 3551

Website: <http://www.chiswickfamilydoctorspractice.com>

Date of inspection visit: 2 February 2016

Date of publication: 12/04/2016

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

## Ratings

### Overall rating for this service

## Overall summary

### Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Chiswick Family Doctors Practice on 2 February 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events. However though the practice carried out an analysis of the significant events these were not always consistently recorded or documented.
- Most risks to patients were assessed and well managed, with the exception of dealing with emergencies.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had the skills, knowledge and experience to deliver effective care and treatment.

- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand.
- Patients said they found it easy to make an appointment with a named GP and that there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the Duty of Candour.

The areas where the provider must make improvement are:

- Ensure availability of oxygen used in medical emergencies.

# Summary of findings

The areas where the provider should make improvement are:

- Ensure that all incidents analysis are consistently documented.

- Ensure recruitment arrangements include all necessary employment checks for all staff.

**Professor Steve Field (CBE FRCP FFPH FRCGP)**  
Chief Inspector of General Practice

# Summary of findings

## The five questions we ask and what we found

We always ask the following five questions of services.

### Are services safe?

The practice is rated as requires improvement for providing safe services.

Requires improvement

- There was a system in place for reporting and recording significant events however improvements are required as incident analysis was not always documented.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information, a verbal and written apology. The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- However the practice did not have oxygen available for use in medical emergencies.

### Are services effective?

- Data from the Quality and Outcomes Framework showed patient outcomes were at or above average for the locality and compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with multidisciplinary teams to understand and meet the range and complexity of patients' needs.

Good

### Are services caring?

- Data from the National GP Patient Survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

# Summary of findings

## Are services responsive to people's needs?

Good

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

## Are services well-led?

Good

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to this.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

# Summary of findings

## The six population groups and what we found

We always inspect the quality of care for these six population groups.

### Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.

Good

### People with long term conditions

The practice is rated as good for the care of people with long-term conditions

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

### Families, children and young people

The provider was rated as good for the care of families, children and young people

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- 76% of patients diagnosed with asthma, on the register, who had an asthma review in the last 12 months was comparable to the national average.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The practice's uptake for the cervical screening programme was 81%, which was comparable to the national average of 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies.

Good

# Summary of findings

- We saw positive examples of joint working with midwives, health visitors and school nurses.

## **Working age people (including those recently retired and students)**

The provider was rated as good for the care of working age people (including those recently retired and students)

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

Good

## **People whose circumstances may make them vulnerable**

The provider was rated as good for the care of people whose circumstances may make them vulnerable

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with multi-disciplinary teams in the case management of vulnerable people.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

## **People experiencing poor mental health (including people with dementia)**

The provider was rated as good for the care of people experiencing poor mental health (including people with dementia).

- 94% of patients diagnosed with dementia who had had their care reviewed in a face to face meeting in the last 12 months, which is comparable to the national average.
- 94% of patients diagnosed with schizophrenia, bipolar and other mental health conditions had a care plan reviewed in the last 12 months, which was higher than the national average.

Good

# Summary of findings

- The practice regularly worked with multi-disciplinary teams in the case management of people experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

# Summary of findings

## What people who use the service say

The national GP patient survey results published on 2 July 2015 for the most recent data showed the practice was performing above the local and national averages. There were 434 surveys distributed with a response of 95 which represents 22% of the practice population who had been asked to complete the national GP survey.

- 92% found it easy to get through to this surgery by phone compared to a CCG average of 72% and a national average of 73%).
- 97% found the receptionists at this surgery helpful (CCG average 84%, national average 87%).
- 89% were able to get an appointment to see or speak to someone the last time they tried (CCG average 80%, national average 85%).

- 94% said the last appointment they got was convenient (CCG average 88%, national average 91%).
- 82% described their experience of making an appointment as good (CCG average 67%, national average 73%).
- 72% usually waited 15 minutes or less after their appointment time to be seen (CCG average 56%, national average 64%).

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 40 comment cards which were all positive about the standard of care received. Patients said they were happy as they always saw the same GPs and they could easily see a GP.

## Areas for improvement

### Action the service **MUST** take to improve

- Ensure availability of oxygen used in medical emergencies.

### Action the service **SHOULD** take to improve

- Ensure that all incidents analysis are consistently documented.
- Ensure recruitment arrangements include all necessary employment checks for all staff.

# Chiswick Family Doctors Practice

## Detailed findings

### Our inspection team

#### Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector and a GP specialist adviser.

## Background to Chiswick Family Doctors Practice

The Chiswick Family Practice is located in the London Borough of Hounslow, and provides a general practice service to around 3500 patients from a shared community health centre.

The practice is registered as a partnership with the Care Quality Commission (CQC) to provide the regulated activities of: treatment of disease, disorder or injury; surgical procedures; diagnostic and screening procedures; family planning services; and maternity and midwifery services at one location.

The practice has a General Medical Services (GMS) contract and provides a full range of essential, additional and enhanced services including maternity services, child and adult immunisations, family planning, sexual health services and minor surgery.

The practice has two GP partners working eight sessions, a salaried GP working five sessions and a locum GP covering four sessions. There is a good mix of female and male staff.

There is a good mix of female and male staff. The practice has a part time practice manager. The rest of the practice

team consists of one part time practice nurse, one part time health care assistant and four administrative staff consisting of medical secretaries', reception staff, clerks and typist.

The Practice is open five days a week. Mondays and Fridays 8:00am to 6:30pm, Tuesdays from 8:00am to 7:00pm, Wednesdays from 8:00am to 8:00pm and Thursdays from 8:00am to 12:30pm. Face to Face consultations in the mornings are from 8:30am to 11:30am and in the afternoons from 2:30pm to 6:30pm on Mondays and Fridays and until 7:00pm on Tuesdays, and 7:30pm on Wednesdays.

When the Practice is closed, the telephone answering service directs patients to contact the out of hours provider.

There were no previous performance issues or concerns about this practice prior to our inspection.

## Why we carried out this inspection

We inspected this service as part of our new comprehensive inspection programme.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

# Detailed findings

## How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 2 February 2016. During our visit we:

- Spoke with a range of staff including the GP partners, practice manager, practice nurse, health care assistant & administrative staff and spoke with patients who used the service.
- Observed how patients were being cared for and talked with carers and/or family members.
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.'

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?

- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

# Are services safe?

## Our findings

### Safe track record and learning

There was a system in place for reporting and recording significant events. However this required improvements.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system.
- However although the practice carried out an analysis of the significant events these were not always consistently recorded or documented.

When there were unintended or unexpected safety incidents, patients received reasonable support, truthful information, a verbal and written apology and were told about any actions to improve processes to prevent the same thing happening again.

### Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse that reflected relevant legislation and local requirements and policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training relevant to their role. GPs were trained to Safeguarding level 3 and one GP who had just returned from maternity leave was due to attend training in April 2016.
- A notice in the waiting room advised patients that chaperones were available if required. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service check (DBS check). (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).

- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency drugs and vaccinations, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing and security). The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Prescription pads were securely stored and there were systems in place to monitor their use. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. (PGDs are written instructions for the supply or administration of medicines to groups of patients who may not be individually identified before presentation for treatment). The practice had a system for production of Patient Specific Directions to enable Health Care Assistants to administer vaccinations after specific training when a doctor or nurse were on the premises. (PSDs are written instructions from a qualified and registered prescriber for a medicine including the dose, route and frequency or appliance to be supplied or administered to a named patient after the prescriber has assessed the patient on an individual basis).
- We reviewed six personnel files and found appropriate recruitment checks had been undertaken prior to employment for most staff. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.
- However the practice had recruited a locum GP to work on a regular basis. They had undertaken some checks in respect of this appointment, but had not followed up on employment references. When we spoke to the practice they advised that the person was known to them

## Are services safe?

personally and had reassurances that the person was fit to work from telephone conversations they had with the other practices they worked for. However no records of this telephone check was available.

- There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

### Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).
- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure that enough staff were on duty.

### Arrangements to deal with emergencies and major incidents

The practice had some arrangements in place to respond to emergencies and major incidents. However improvements are required.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had the use of a defibrillator available on the premises. This was owned by another practice in the building. However the practice did not have access to oxygen required for medical emergencies.
- A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and fit for use.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met peoples' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

### Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 98% of the total number of points available, with 8% exception reporting. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects). This practice was not an outlier for any QOF (or other national) clinical targets.

- The percentage of patients with hypertension having regular blood pressure tests was similar to the national average. (practice 82%; national 83%)
- Performance for mental health related and hypertension indicators was similar to the CCG and national average (practice 94%; national 88%).
- The dementia diagnosis rate was comparable to the national average (practice 94%; national 84%).
- The percentage of patients with diabetes, on the register, who have a record of an albumin: creatinine ratio test (The urine albumin test or albumin/creatinine ratio ACR is used to screen people with chronic conditions, such as diabetes) in the preceding 12 months was comparable to the national average (practice 78%; national 77%).

Clinical audits demonstrated quality improvement.

- There had been two clinical audits completed in the last two years, both of these were completed audits where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result included an improvement in the processing of radiology results after the practice had identified errors with the old system used.

### Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. It covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff for example, for those reviewing patients with long-term conditions. Staff administering vaccinations and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccinations could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support during sessions, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had had an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire procedures, and basic life support and information governance awareness. Staff had access to and made use of e-learning training modules and in-house training.

# Are services effective?

(for example, treatment is effective)

## Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results. Information such as NHS patient information leaflets were also available.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care services to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. We saw evidence that multi-disciplinary team meetings took place on a monthly basis and that care plans were routinely reviewed and updated.

## Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.

- The process for seeking consent was monitored through records audits.

## Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support.

- These included patients in the last 12 months of their lives, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation.

The practice's uptake for the cervical screening programme was 81%, which was comparable to the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 78% to 100% and five year olds from 61% to 91%.

Flu vaccination rates for the over 65s were 66%, and at risk groups 48%. These were comparable to CCG and national averages.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for people aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

# Are services caring?

## Our findings

### Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 40 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was above average for its satisfaction scores on consultations with GPs and nurses. For example:

- 94% said the GP was good at listening to them compared to the CCG average of 83% and national average of 86%.
- 92% said the GP gave them enough time (CCG average 80%, national average 86%).
- 96% said they had confidence and trust in the last GP they saw (CCG average 92%, national average 95%).
- 92% said the last GP they spoke to was good at treating them with care and concern (CCG average 79%, national average 85%).
- 90% said the last nurse they spoke to was good at treating them with care and concern (CCG average 86%, national average 90%).

- 97% said they found the receptionists at the practice helpful (CCG average 83%, national average 86%).

### Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback on the comment cards we received was also positive and aligned with these views.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were above local and national averages. For example:

- 86% said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 80% and national average of 86%.
- 89% said the last GP they saw was good at involving them in decisions about their care (CCG average 74%, national average 81%).
- 85% said the last nurse they saw was good at involving them in decisions about their care (CCG average 80%, national average 84%).

Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.

### Patient and carer support to cope emotionally with care and treatment

Notices in the patient waiting room told patients how to access a number of support groups and organisations.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 0.5% of the practice list as carers. The practice reported that a small number of their patients were carers. Written information was available to direct carers to the various avenues of support available to them.

## Are services caring?

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified.

- The Practice offers late evening appointments on Tuesdays until 7:00pm and Wednesdays until 7:30pm for patients who are not able to attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who would benefit from these.
- Same day appointments were available for children and those with serious medical conditions.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately/were referred to other clinics for vaccines available privately.
- There were disabled facilities and translation services available.

### Access to the service

The practice is currently open five days a week from 08:00-20:00 on Monday and Wednesday and from 8:00-19:00 Tuesdays and Fridays and on Thursdays the practice is open until 16:00. Consultation times are 08:30 until 11:30 and 15:30 until 18:30. When the practice is closed, the telephone answering service directs patients to contact the out of hours provider.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was above local and national averages.

- 82% of patients were satisfied with the practice's opening hours compared to the CCG average of 73% and national average of 74%.

- 92% patients said they could get through easily to the surgery by phone (CCG average 71%, national average 73%).
- 83% patients described their experience of making an appointment as good (CCG average 67%, national average 73%).
- 67% patients said they usually waited 15 minutes or less after their appointment time (CCG average 56%, national average 64%).

People told us on the day of the inspection that they were able to get appointments when they needed them.

### Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system. This was included in the practice information leaflet and displayed in the reception area. Patients we spoke with were aware of the process to follow if they wished to make a complaint.

We looked at one complaints received in the last 12 months and found these were satisfactorily handled in a timely way. Lessons were learnt from concerns and complaints and action was taken to as a result to improve the quality of care. For example the practice had introduced their own in-house phlebotomy service following complaints from their patients regarding the service received from another location were patients had to attend for blood tests.

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

## Our findings

### Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

### Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities
- Practice specific policies were implemented and were available to all staff
- A comprehensive understanding of the performance of the practice was maintained
- A programme of continuous clinical and internal audit which was used to monitor quality and to make improvements
- There were some arrangements for identifying, recording and managing risks, issues and implementing mitigating actions. However, the practice were not consistently recording all incidents that occurred, the risks associated with dealing with medical emergencies without oxygen had not been assessed.

### Leadership and culture

The partners in the practice had the experience, capacity and capability to run the practice and ensure high quality care. They prioritise safe, high quality and compassionate care. The partners were visible in the practice and staff told us they were approachable and always took the time to listen to all members of staff.

The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents.

When there were unexpected or unintended safety incidents:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology
- They kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident in doing so and felt supported if they did.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

### Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. There was an active PPG which met annually, carried out patient surveys and submitted proposals for improvements to the practice management team. The practice was also part of a CCG initiative that was working to build a bigger PPG group within the locality. For example, the PPG were working with the practice to share concerns over the lack of space in the health centre.
- The practice had gathered feedback from staff through staff meetings, appraisals and discussion. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

### Continuous improvement

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

There was a strong focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area.

This section is primarily information for the provider

## Requirement notices

### Action we have told the provider to take

The table below shows the legal requirements that were not being met. The provider must send CQC a report that says what action they are going to take to meet these requirements.

Regulated activity	Regulation
Diagnostic and screening procedures	Regulation 12 HSCA (RA) Regulations 2014 Safe care and treatment
Family planning services	<b>Regulation 12 of the Health and Social Care Act 2008 (Regulated Activities) Regulations 2014. Safe care and treatment.</b>
Maternity and midwifery services	The registered provider did not ensure that care and treatment was provided in a safe way.
Treatment of disease, disorder or injury	<b>How the regulation was not met:</b>
	Oxygen for use in medical emergencies was not available.
	Regulation 12 (2)(a)(b).
