## Inspection Report

8 Wellington Road  
Bridlington  
Humberside  
YO15 2BG

Tel: 01262 679027

Website: [www.bridlingtondentalstudio.co.uk](http://www.bridlingtondentalstudio.co.uk)

Date of inspection visit: 28 July 2017

Date of publication: 07/08/2017

### Overall summary

We carried out this announced inspection on 27 July 2017 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

#### **Our findings were:**

##### **Are services safe?**

We found that this practice was providing safe care in accordance with the relevant regulations.

##### **Are services effective?**

We found that this practice was providing effective care in accordance with the relevant regulations.

##### **Are services caring?**

We found that this practice was providing caring services in accordance with the relevant regulations.

##### **Are services responsive?**

We found that this practice was providing responsive care in accordance with the relevant regulations.

##### **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

##### **Background**

Grin – Bridlington provides private treatment to adults and children.

There is no access for people who use wheelchairs as both treatment rooms are on the first floor, but they are directed to a nearby service which is accessible. Car parking spaces, including for patients with disabled badges, are available near the practice.

The dental team includes two dentists, two dental nurses, a dental hygiene therapist, a receptionist, a marketing consultant and a practice manager.

# Summary of findings

The practice has two treatment rooms on the first floor, a decontamination room for sterilising dental instruments and a general office. The building is shared with two other businesses who also occupy the first and second floor of the premises.

The practice is owned by an organisation and as a condition of registration must have a person registered with the Care Quality Commission as the registered manager. Registered managers have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run. The registered manager at Grin – Bridlington was the principal dentist.

On the day of inspection we collected 14 CQC comment cards filled in by patients. This information gave us a positive view of the practice.

During the inspection we spoke with two dentists, a dental nurse, the receptionist and the practice manager. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open:

Monday – Thursday 9am – 5pm

Friday 9:30am – 5pm.

## **Our key findings were:**

- The practice was clean and well maintained.
- The practice had infection control procedures which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The practice had some systems to help them manage risk.
- The practice had suitable safeguarding processes and staff knew their responsibilities for safeguarding adults and children.

- The practice had thorough staff recruitment procedures.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- The appointment system met patients' needs.
- The practice had effective leadership. Staff felt involved and supported and worked well as a team.
- The practice asked staff and patients for feedback about the services they provided.
- The practice dealt with complaints positively and efficiently.

There were areas where the provider could make improvements. They should:

- Review the practice's arrangements for receiving and responding to patient safety alerts, recalls and rapid response reports issued from the Medicines and Healthcare products Regulatory Agency (MHRA) and through the Central Alerting System (CAS), as well as from other relevant bodies, such as Public Health England (PHE).
- Review the practice fire risk assessment to ensure the other businesses located in the premises can exit the building. Implement relevant checks and evacuation plans.
- Review the need for a practice gas and electrical safety certificate.
- Review the practice's protocols for the use of closed circuit television cameras (CCTV) taking into account guidelines published by the Information Commissioner's Office (ICO).
- Review the practice responsibilities to respond to the needs of patients with disabilities and the requirements of the Equality Act 2010.

# Summary of findings

## The five questions we ask about services and what we found

We always ask the following five questions of services.

### Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.

Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns.

Staff were qualified for their roles and the practice completed essential recruitment checks.

Premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had suitable arrangements for dealing with medical and other emergencies.

We were told staff had not received any MHRA alerts since 2014. There were no records of any checks to the smoke alarms; emergency lighting and an evacuation had not been completed. One fire exit had restricted access due to storage of items. The practice did not have a gas or electrical safety certification.

All of the above concerns were actioned during the inspection and evidence of an action plan and booked appointments was shown to the inspector.

No action

### Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentists assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the treatment they received as person centered, sensitive and caring. The dentists discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The practice supported staff to complete training relevant to their roles and had systems to help them monitor this.

No action

### Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from 14 people. Patients were positive about all aspects of the service the practice provided. They told us staff were extremely caring, professional and thorough. They said that they were given helpful, honest explanations about dental treatment and said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

No action

# Summary of findings

CCTV was in operation within the practice and we were told there were no policies in place for its justification and safe use. There was no supporting evidence to show the practice had registered the CCTV with the ICO.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

## **Are services responsive to people's needs?**

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice's appointment system met patients' needs. Patients could get an appointment quickly if in pain.

Staff considered patients' different needs. This included providing facilities for disabled patients and families with children. The practice did not have access to interpreter services.

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

**No action**

## **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and staff felt supported and appreciated.

The practice team kept complete patient dental care records which were stored securely.

The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

Some of the staff had specific roles and responsibilities to support the principal dentist and we saw staff had access to suitable supervision and support for these.

**No action**

# Are services safe?

## Our findings

### Reporting, learning and improvement from incidents

The practice had policies and procedures to report, investigate, respond and learn from accidents, incidents and significant events. Staff knew about these and understood their role in the process.

The practice recorded, responded to and discussed all incidents to reduce risk and support future learning.

The practice had not received national patient safety and medicines alerts from the Medicines and Healthcare Products Regulatory Authority (MHRA) since 2014. We brought this to the attention of the practice manager who told us they had now registered with MHRA again and had reviewed all of the alerts since 2014 to ensure they could action any recommendations immediately.

### Reliable safety systems and processes (including safeguarding)

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns. The practice had a whistleblowing policy. Staff told us they felt confident they could raise concerns without fear of recrimination.

We looked at the practice's arrangements for safe dental care and treatment. The practice followed relevant safety laws when using needles and other sharp dental items. Disposable matrix bands were implemented for use in each surgery. The risk assessments were updated annually to ensure any new updates or equipment was added.

The dentists used rubber dams in line with guidance from the British Endodontic Society when providing root canal treatment.

The practice had a business continuity plan describing how the practice would deal events which could disrupt the normal running of the practice.

### Medical emergencies

Staff knew what to do in a medical emergency and completed training in emergency resuscitation and basic life support every year.

Emergency equipment and medicines were available as described in recognised guidance. We saw that staff kept comprehensive records of their checks to make sure these were available, within their expiry date, and in working order.

### Staff recruitment

The practice had a staff recruitment policy and procedure to help them employ suitable staff. This reflected the relevant legislation. We looked at three staff recruitment files. These showed the practice followed their recruitment procedure.

Clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

### Monitoring health & safety and responding to risks

The practice's health and safety policies and risk assessments were up to date and reviewed to help manage potential risk. These covered general workplace and specific dental topics. The practice had current employer's liability insurance and checked each year that the clinicians' professional indemnity insurance was up to date.

The practice had completed an in house fire risk assessment but this did not cover how to ensure the other businesses located in the premises could exit the building. There were no checks of the fire alarm; emergency lighting and a fire drill had not been completed. We also found items blocking the emergency exits. We were told new fire checklists for weekly alarm and emergency lighting were being implemented and a full building evacuation would be carried out at the next practice meeting.

The practice manager had a system in place to ensure clinical staff had received appropriate vaccinations, including the vaccination to protect them against the Hepatitis B virus, and that the effectiveness of the vaccination was identified. People who are likely to come into contact with blood products, and are at increased risk of injuries from sharp instruments, should receive the Hepatitis B vaccination to minimise the risks of acquiring blood borne infections.

# Are services safe?

A dental nurse worked with the dentists and dental therapist when they treated patients.

## **Infection control**

The practice had an infection prevention and control policy and procedures to keep patients safe. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM01-05) published by the Department of Health.

Staff completed infection prevention and control training regularly.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM01-05. The records showed equipment staff used for cleaning and sterilising instruments was maintained and used in line with the manufacturers' guidance.

The practice carried out infection prevention and control audits twice a year. The latest audit showed the practice was meeting the required standards.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment.

The staff were responsible for the environmental cleaning of the practice, we saw the practice was clean when we inspected and patients confirmed this was usual.

## **Equipment and medicines**

We saw servicing documentation for the equipment used. Staff carried out checks in line with the manufacturers' recommendations.

We were shown certificates for portable appliance testing of equipment but there was no gas or electric safety certificates available. We were told the gas and electric testing had been booked to ensure this was completed as soon as possible,

The practice had suitable systems for prescribing, dispensing and storing medicines.

The practice stored and kept records of private prescriptions as described in current guidance.

## **Radiography (X-rays)**

The practice had suitable arrangements to ensure the safety of the X-ray equipment. They met current radiation regulations and had the required information in their radiation protection file.

We saw evidence that the dentists justified, graded and reported on the X-rays they took. The practice carried out X-ray audits every year following current guidance and legislation.

Clinical staff completed continuous professional development in respect of dental radiography.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Monitoring and improving outcomes for patients

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentists assessed patients' treatment needs in line with recognised guidance.

We saw that the practice audited patients' dental care records to check that the dentists and hygiene therapist recorded the necessary information.

### Health promotion & prevention

The practice believed in preventative care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists told us they prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children based on an assessment of the risk of tooth decay.

The dentists told us they discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

### Staffing

Staff new to the practice had a period of induction based on a structured induction programme. We confirmed clinical staff completed the continuous professional development required for their registration with the General Dental Council.

Staff told us they discussed training needs at annual appraisals. We saw evidence of completed appraisals.

### Working with other services

Dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide. These included referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist. The practice monitored urgent referrals to make sure they were dealt with promptly. Referral audits were also carried out to ensure referral processes were effective.

### Consent to care and treatment

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentists told us they gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to Gillick competence and the staff were aware of the need to consider this when treating young people under 16. Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

# Are services caring?

## Our findings

### **Respect, dignity, compassion and empathy**

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were polite, professional and provided an amazing service. We saw that staff treated patients respectfully, appropriately and were friendly towards patients at the reception desk and over the telephone.

Nervous patients said staff were compassionate and understanding. Longer appointments were booked for children or nervous patients.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided limited privacy when reception staff were dealing with patients. Staff told us that if a patient asked for more privacy they would take them into another room. The reception computer screens were not visible to patients and staff did not leave personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

Music was played in the treatment rooms and there were magazines and an information screen in the waiting room. The practice provided drinking water, tea and coffee.

Information folders, patient survey results and thank you cards were available for patients to read.

A closed circuit television (CCTV) camera was in the reception area. During the inspection we found CCTV signage was not easily visible to ensure patients were aware of this. The practice did not have a policy, risk assessment or registration with the Information Commissioner's Office (ICO). We brought this to the attention of the practice manager who assured us this would be addressed.

### **Involvement in decisions about care and treatment**

The practice gave patients clear information to help them make informed choices. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them. A dentist described the conversations they had with patients to satisfy themselves they understood their treatment options.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

The practice's website provided patients with information about the range of treatments available at the practice. These included general dentistry and treatments for gum disease and more complex treatment such as orthodontics.

Each treatment room had a television on the ceiling for patients and they could choose which channel they watched during treatment. There was also a screen so the dentists could show patients photographs, videos and X-ray images when they discussed treatment options. Staff also used videos to explain treatment options to patients needing more complex treatment.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting patients' needs

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice had an efficient appointment system to respond to patients' needs. Staff told us that patients who requested an urgent appointment were seen the same day. Patients told us they had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

Staff told us that they currently had some patients for whom they needed to make adjustments to enable them to receive treatment. The staff told us they had installed an additional hand rail on the stairs for those with restricted mobility.

### Tackling inequity and promoting equality

The practice had taken into consideration the needs of different groups of people, for example, people with disabilities, and put in place reasonable adjustments, for example, handrails to assist with mobility. The practice had not completed a disability access audit but had renovation plans to ensure access to surgeries could be improved by implementing step free access and ground floor surgeries. The surgeries were located on the first floor and were not accessible to wheelchair users. We were told they would be referred to a local practice that could accommodate them.

Staff said they could not provide information in different formats and languages to meet individual patients' needs. They had not had access to interpreter and translation services. We discussed this with the practice manager and arrangements were put in place immediately to ensure this was available if required.

### Access to the service

The practice displayed its opening hours in the premises, their information leaflet and on their website.

We confirmed the practice kept waiting times and cancellations to a minimum.

The practice was committed to seeing patients experiencing pain on the same day and kept appointments free for this. They took part in an emergency on-call arrangement with some other local practices. The website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

### Concerns & complaints

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint. The practice manager was responsible for dealing with these. Staff told us they would tell the practice manager about any formal or informal comments or concerns straight away so patients received a quick response.

The practice manager told us they aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received. These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

The practice had received two complaints in the previous 12 months.

We were told of an example of when a complaint was used to make changes within the practice. It was clear the practice used complaints as a way of improving the service for patients.

# Are services well-led?

## Our findings

### **Governance arrangements**

The principal dentist had overall responsibility for the management and clinical leadership of the practice. The practice manager was responsible for the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities.

The practice had policies, procedures and risk assessments to support the management of the service and to protect patients and staff. These included arrangements to monitor the quality of the service and make improvements.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

### **Leadership, openness and transparency**

Staff were aware of the duty of candour requirements to be open, honest and to offer an apology to patients if anything went wrong.

Staff told us there was an open, no blame culture at the practice. They said the practice manager encouraged them to raise any issues and felt confident they could do this. They knew who to raise any issues with and told us the practice manager was approachable, would listen to their concerns and act appropriately. The practice manager discussed concerns at staff meetings and it was clear the practice worked as a team and dealt with issues professionally.

The practice held meetings where staff could raise any concerns and discuss clinical and non-clinical updates. Immediate discussions were arranged to share urgent information.

### **Learning and improvement**

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records, X-rays and infection prevention and control. They had clear records of the results of these audits and the resulting action plans and improvements.

The principal dentist showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff. The staff had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

Staff told us they completed training, including medical emergencies and basic life support, each year. The General Dental Council requires clinical staff to complete continuous professional development. Staff told us the practice provided support and encouragement for them to do so.

### **Practice seeks and acts on feedback from its patients, the public and staff**

The practice had a system in place to seek the views of patients about all areas of service delivery through the use of regular patient surveys and a suggestion box.

The practice gathered feedback from staff through meetings, surveys, and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on.
