# Slipshoe Street Dental Surgery

## Inspection Report

6 Slipshoe Street  
Reigate  
Surrey  
RH2 9HU  
Tel: 01737 221750  
Website: [www.slipshoedental.co.uk](http://www.slipshoedental.co.uk)

Date of inspection visit: 02 September 2016  
Date of publication: 29/09/2016

### Overall summary

We carried out an announced comprehensive inspection on 02 September 2016 to ask the practice the following key questions; Are services safe, effective, caring, responsive and well-led?

#### **Our findings were:**

##### **Are services safe?**

We found that this practice was providing safe care in accordance with the relevant regulations.

##### **Are services effective?**

We found that this practice was providing effective care in accordance with the relevant regulations.

##### **Are services caring?**

We found that this practice was providing caring services in accordance with the relevant regulations.

##### **Are services responsive?**

We found that this practice was providing responsive care in accordance with the relevant regulations.

##### **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

### **Background**

Slipshoe Street Dental Surgery is located in Reigate, Surrey. The practice is situated in a converted listed building. There are seven treatment rooms, a decontamination room, an office, a reception area, patient and staff toilets, a large waiting area and a staff room with a kitchen. These are distributed across the ground and first floors of the building.

The practice provides NHS and private services to adults and children. The practice offers a range of dental services including routine examinations and treatment, veneers and crowns and bridges.

The staff structure of the practice consists of two principal partners who are dentists, seven associate dentists, nine dental nurses, two dental hygienists, four reception staff and a practice manager and reception manager.

The practice opening hours are Monday to Friday from 8.00am to 5.15pm.

The reception manager is the registered manager. A registered manager is a person who is registered with the Care Quality Commission to manage the service. Like registered providers, they are 'registered persons'.

# Summary of findings

Registered persons have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated Regulations about how the practice is run.

The inspection took place over one day and was carried out by a CQC inspector and a dental specialist advisor.

Before the inspection we sent Care Quality Commission (CQC) comments cards to the practice for patients to complete to tell us about their experience of the practice. We collected 39 completed cards. All the comments received were positive about the care that patients received from the practice. They were complimentary about the friendly and caring attitude of the staff.

## **Our key findings were:**

- Patients' needs were assessed and care was planned in line with current guidance such as from the National Institute for Health and Care Excellence (NICE).
- There were effective systems in place to reduce and minimise the risk and spread of infection.
- The practice had effective safeguarding processes in place and staff understood their responsibilities for safeguarding adults and children living in vulnerable circumstances.
- Staff reported incidents and kept records of these which the practice used for shared learning.
- There were effective arrangements in place for managing medical emergencies.
- Equipment, such as the air compressor, autoclave (steriliser), fire extinguishers, and X-ray equipment had all been checked for effectiveness and had been regularly serviced.
- Patients indicated that they felt they were listened to and that they received good care from a helpful and caring practice team.
- The practice ensured staff maintained the necessary skills and competence to support the needs of patients.
- The practice had implemented clear procedures for managing comments, concerns or complaints.
- The provider had a clear vision for the practice and staff told us they were well supported by the management team.
- Governance arrangements and audits were effective in improving the quality and safety of the services.

# Summary of findings

## The five questions we ask about services and what we found

We always ask the following five questions of services.

### Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems in place to minimise the risks associated with providing dental services. There was a safeguarding lead and staff understood their responsibilities in terms of identifying and reporting any potential abuse. There were systems in place for identifying, investigating and learning from incidents relating to the safety of patients and staff members. The practice had policies and protocols, which staff were following, for the management of infection control, medical emergencies and dental radiography. We found the equipment used in the practice was well maintained and checked for effectiveness.

No action

### Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The practice provided evidence-based care in accordance with relevant, published guidance, for example, from the General Dental Council (GDC). The practice monitored patients' oral health and gave appropriate health promotion advice. Staff explained treatment options to ensure that patients could make informed decisions about any treatment. The practice worked well with other providers and followed up on the outcomes of referrals made to other providers.

Staff engaged in continuous professional development (CPD) and were meeting all of the training requirements of the General Dental Council (GDC). Staff had received appraisals within the past year to discuss their role and identify additional training needs.

No action

### Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received positive feedback from patients through CQC comment cards prior to the day of the inspection. Patients that were nervous commented how relaxed they were made to feel during their treatment. We also observed staff were welcoming and helpful to patients.

Staff were aware of the importance of protecting patients' privacy and dignity and the importance of data protection and confidentiality.

No action

### Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Patients had good access to appointments, including emergency appointments, which were available on the same day. The culture of the practice promoted equality of access for all. The practice was wheelchair accessible with the treatment rooms situated on the ground floor however some ramps were required to overcome the steps.

No action

# Summary of findings

There was a complaints policy in place. Any complaints received had been recorded and appropriately investigated. Patient feedback was also used to monitor the quality of the service provided.

## **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had robust clinical governance and risk management structures in place. These were well maintained and disseminated effectively to all members of staff. A system of audits was used to monitor and improve performance.

Staff described an open and transparent culture where they were comfortable raising and discussing concerns with the provider or managers. They were confident in the abilities of the management to address any issues as they arose.

**No action** 

# Slipshoe Street Dental Surgery

## Detailed findings

### Background to this inspection

We carried out this inspection under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. This inspection was planned to check whether the practice was meeting the legal requirements and regulations associated with the Health and Social Care Act 2008.

We carried out an announced, comprehensive inspection on 02 September 2016. The inspection took place over one day and was carried out by a CQC inspector and a dental specialist advisor.

We reviewed information received from the provider prior to the inspection. During our inspection we reviewed policy documents and spoke with five members of staff. We

conducted a tour of the practice and looked at the storage arrangements for emergency medicines and equipment. One of the dental nurses demonstrated how they carried out decontamination procedures of dental instruments.

Twenty-nine people provided feedback about the service. Patients were positive about the care they received from the practice. They were complimentary about the friendly and caring attitude of the dental staff.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions therefore formed the framework for the areas we looked at during the inspection.

# Are services safe?

## Our findings

### Reporting, learning and improvement from incidents

There was an effective system in place for reporting and learning from incidents and accidents. There was an incident reporting policy and an accidents reporting book. Staff understood the process for accident reporting, including the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 2013 (RIDDOR). The practice used the correct processes to investigate and follow up on any learning to prevent repeated events.

The provider and managers were aware of the Duty of Candour. They told us they were committed to operating in an open and transparent manner; they would always inform patients if anything had gone wrong and offer an apology in relation to this. [Duty of candour is a requirement under The Health and Social Care Act 2008 (Regulated Activities) Regulations 2014 on a registered person who must act in an open and transparent way with relevant persons in relation to care and treatment provided to service users in carrying on a regulated activity].

### Reliable safety systems and processes (including safeguarding)

The practice had a well-designed safeguarding policy which referred to national guidance. One of the principal dentists was the named practice lead for child and adult safeguarding. Information about the local authority contacts for safeguarding concerns was held in the policy files, in the staff room and at the reception desk.

Staff were able to describe the types of behaviour a child might display that would alert them to possible signs of abuse or neglect. They also had a good awareness of the issues around vulnerable elderly patients who presented with dementia. There was evidence in staff files showing that staff had been trained in safeguarding adults and children to an appropriate level.

The practice had carried out a range of risk assessments and implemented policies and protocols with a view to keeping staff and patients safe. For example, we asked staff about the prevention of needle stick injuries. Following administration of a local anaesthetic to a patient, needles were not resheathed using the hands but instead a needle guard was used. The staff we spoke with demonstrated a clear understanding of the practice policy and protocol

with respect to handling sharps and needle stick injuries. There was also a written risk assessment, in line with Health and Safety (Sharp Instruments in Healthcare) Regulations 2013.

The practice followed other national guidelines on patient safety. The dentists told us they routinely used a rubber dam when providing root canal treatment to patients in line with guidance from the British Endodontic Society. (A rubber dam is a thin, rectangular sheet, usually latex rubber, used in dentistry to isolate the operative site from the rest of the mouth and protect the airway). Rubber dams should be used when endodontic treatment is being provided. On the rare occasions when it is not possible to use rubber dam the reasons should be recorded in the patient's dental care records giving details as to how the patient's safety was assured.

### Medical emergencies

The practice had arrangements in place to deal with medical emergencies at the practice. The practice had an automated external defibrillator (AED). (An AED is a portable electronic device that analyses life threatening irregularities of the heart and delivers an electrical shock to attempt to restore a normal heart rhythm). The practice held emergency medicines in line with guidance issued by the British National Formulary for dealing with common medical emergencies in a dental practice. Medical oxygen and other related items, such as manual breathing aids and portable suction, were available in line with the Resuscitation Council UK guidelines. The emergency medicines were all in date and stored securely with emergency oxygen in a central location known to all staff. Staff received annual training in using the emergency equipment.

### Staff recruitment

The staff structure of the practice consists of two principal partners who are dentists, seven associate dentists, nine dental nurses, two dental hygienists, four reception staff and a practice manager and reception manager.

There was a recruitment policy in place which stated that all relevant checks would be carried out to confirm that any person being recruited was suitable for the role. This included the use of an application form, interview, review of employment history, evidence of relevant qualifications, the checking of references and a check of registration with the General Dental Council.

# Are services safe?

We checked the staff recruitment records, including those for two members of staff who had been recruited within the past year. We found that the practice had followed its recruitment policy and retained all of the relevant documents.

It was practice policy to carry out a Disclosure and Barring Service (DBS) check for all members of staff prior to employment. We saw evidence that all members of staff had a DBS check prior to employment. (The DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).

## **Monitoring health & safety and responding to risks**

There were arrangements in place to deal with foreseeable emergencies. We saw that there was a health and safety policy in place. The practice had been assessed for risk of fire and there were documents showing that fire extinguishers had been recently serviced.

There were arrangements in place to meet the Control of Substances Hazardous to Health 2002 (COSHH) regulations. There was a COSHH file where risks to patients, staff and visitors associated with hazardous substances were identified. Actions were described to minimise identified risks. Staff were aware of the COSHH file and of the strategies in place to minimise the risks associated with these products. We noted that overall the COSHH products were securely stored however the environmental cleaning products were located in cupboard that could be accessed by an unauthorised person. The manager told us they would review this with the contracted cleaning company.

The practice had a system in place to respond promptly to Medicines and Healthcare products Regulatory Agency (MHRA) advice. MHRA alerts, and alerts from other agencies, were received by the practice manager via email. These were disseminated at staff meetings, where appropriate.

## **Infection control**

There were effective systems in place to reduce the risk and spread of infection within the practice. There was an infection control policy which included the decontamination of dental instruments, hand hygiene, use

of protective equipment, and the segregation and disposal of clinical waste. The practice had carried out practice-wide infection control audits every six months and found high standards throughout the practice.

We observed that the premises appeared clean and tidy. Hand-washing facilities were available, including wall-mounted liquid soap, hand gels and paper towels in the treatment room, decontamination room and toilet. Hand-washing protocols were also displayed appropriately in various areas of the practice.

The practice had a decontamination room and a dedicated dental nurse on a daily basis that worked on a rota system. We asked the dental nurse on the day to demonstrate the end-to-end process of infection control procedures at the practice. The protocols showed that the practice had followed the guidance on decontamination and infection control issued by the Department of Health, namely 'Health Technical Memorandum 01-05 - Decontamination in primary care dental practices (HTM 01-05)'.

An instrument transportation system had been implemented to ensure the safe movement of instruments between treatment rooms and the decontamination room which ensured the risk of infection spread was minimised. The process of cleaning, inspection, sterilisation, packaging and storage of instruments followed a well-defined system of zoning from dirty through to clean.

Instruments were manually cleaned prior to inspection under a light magnification device. Items were then placed in an autoclave (steriliser). When instruments had been sterilized, they were pouched and stored appropriately, until required. All of the pouches we checked had a date of sterilisation and an expiry date.

We saw that there were systems in place to ensure that the autoclaves were working effectively. These included, for example, the automatic control test and steam penetration test. It was observed that the data sheets used to record the essential daily validation checks of the sterilisation cycles were complete and up to date.

Staff we spoke with in the treatment rooms explained the decontamination of the general treatment room environment following the treatment of a patient. We saw that there were written guidelines for staff to follow for ensuring that the working surfaces, dental unit and dental chair were decontaminated. This included the treatment of the dental water lines.

# Are services safe?

We checked the contents of the drawers in some of the treatment rooms. These were well stocked, clean, ordered and free from clutter. All of the instruments were pouched. It was obvious which items were for single use and these items were clearly new. The treatment room had the appropriate personal protective equipment, such as gloves and aprons, available for staff and patient use.

The dental water lines were maintained to prevent the growth and spread of Legionella bacteria (Legionella is a term for particular bacteria which can contaminate water systems in buildings). The practice manager described the method they used which was in line with current HTM 01-05 guidelines. A Legionella risk assessment had been carried out by an external contractor. The practice was following recommendations to reduce the risk of Legionella, for example, through the regular testing of the water temperatures. A record had been kept of the outcome of these checks on a monthly basis.

The segregation and storage of dental waste was in line with current guidelines laid down by the Department of Health. We observed that sharps containers, clinical waste bags and municipal waste were properly maintained. The practice used a contractor to remove dental waste from the practice. Waste was stored in a separate, locked location within the practice prior to collection by the contractor. Waste consignment notices were available for inspection.

Staff files showed that staff regularly attended training courses in infection control. Clinical staff were also required to produce evidence to show that they had been effectively vaccinated against Hepatitis B to prevent the spread of infection between staff and patients. (People who are likely to come into contact with blood products, or are at increased risk of needle-stick injuries should receive these vaccinations to minimise risks of blood borne infections.)

## Equipment and medicines

We found that the equipment used at the practice was regularly serviced and well maintained. We saw documents showing that the air compressor, fire equipment and X-ray equipment had all been inspected and serviced recently.

For example, a Pressure Vessel Certificate for the dental compressor and autoclave had been issued within the past year, in accordance with the Pressure Systems Safety Regulations 2000.

Portable appliance testing (PAT) had been completed in accordance with good practice guidance in 2016 and monthly visual inspections had been carried out thereafter. PAT is the name of a process during which electrical appliances are routinely checked for safety.

The practice stored small numbers of prescriptions pads for NHS treatment and each dentist correctly wrote out private prescriptions. There was a system for tracking the NHS prescription numbers at the practice for enhanced security.

The expiry dates of medicines, oxygen and equipment were monitored using weekly and monthly check sheets which enabled the staff to replace out-of-date drugs and equipment promptly.

## Radiography (X-rays)

There was a well-maintained radiation protection file in line with the Ionising Radiation Regulations (IRR) 1999 and Ionising Radiation (Medical Exposure) Regulations 2000 (IRMER). This file contained the names of the Radiation Protection Advisor and the Radiation Protection Supervisor as well as the necessary documentation pertaining to the maintenance of the X-ray equipment. Included in the file were the critical examination packs for the X-ray set along with the three-yearly maintenance logs and a copy of the local rules.

We saw that the local rules were displayed in each treatment room and were up to date. A copy of the notification for the X-ray equipment to the Health and Safety Executive (HSE) was also stored in the radiation protection file.

We saw evidence in the staff records which showed they had completed radiography and radiation protection training.

Audits on X-ray quality were undertaken at regular intervals with the last audit having been completed February 2016.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Monitoring and improving outcomes for patients

The dentists carried out consultations, assessments and treatment in line with recognised general professional guidelines and General Dental Council (GDC) guidelines. The dentists we spoke with described to us how they carried out their assessment. The assessment began with the patient completing a medical history questionnaire covering any health conditions, medicines being taken and any allergies suffered. We saw evidence that the medical history was updated at subsequent visits. This was followed by an examination covering the condition of a patient's teeth, gums and soft tissues and the signs of mouth cancer. Patients were made aware of the condition of their oral health and whether it had changed since the last appointment.

The patient's dental care record was updated with the proposed treatment after discussing options with the patient. A treatment plan was then given to each patient and this included details of the costs involved. Patients were monitored through follow-up appointments and these were scheduled in line with their individual requirements.

We checked a sample of dental care records to confirm the findings. These showed that the findings of the assessment and details of the treatment carried out were recorded appropriately. We saw details of the condition of the gums were noted using the basic periodontal examination (BPE) scores and soft tissues lining the mouth. (The BPE is a simple and rapid screening tool that is used to indicate the level of examination needed and to provide basic guidance on treatment need). These were carried out, where appropriate, during a dental health assessment.

### Health promotion & prevention

The practice promoted the maintenance of good oral health through the use of health promotion and disease prevention strategies. The dentists told us they discussed oral health with their patients, for example, effective tooth brushing and dietary advice. They were aware of the need to discuss a general preventive agenda with their patients and referred to the advice supplied in the Department of Health publication 'Delivering better oral health: an evidence-based toolkit for prevention'. (This is an evidence-based toolkit used by dental teams for the

prevention of dental disease in a primary and secondary care setting). They told us they held discussions with their patients, where appropriate, around smoking cessation, sensible alcohol use and dietary advice. The dentists also carried out examinations to check for the early signs of oral cancer.

There were two dental hygienists working at the practice. Where required, the dentists referred patients to the hygienist to further address oral hygiene concerns.

We observed that there were health promotion materials displayed in the waiting areas. These could be used to support patient's understanding of how to prevent gum disease and how to maintain their teeth in good condition.

### Staffing

Staff told us they received appropriate professional development and training. We checked three staff files and saw that this was the case. The training covered all of the mandatory requirements for registration issued by the General Dental Council. This included responding to emergencies, safeguarding, infection control and radiography and radiation protection training.

There was an induction programme for new staff to follow to ensure that they understood the protocols and systems in place at the practice.

Staff told us they were engaged in an appraisal process on a yearly basis. This reviewed their performance and identified their training and development needs. We checked some of the notes kept from these meetings and saw that each member of staff had the opportunity to put a development plan in place.

### Working with other services

The practice had suitable arrangements in place for working with other health professionals to ensure quality of care for their patients.

The dentists and reception staff explained how they worked with other services, when required. The dentist was able to refer patients to a range of specialists in primary and secondary care if the treatment required was not provided by the practice. For example, the practice made referrals to other specialists for orthodontics, implants and more complicated extractions.

We reviewed the systems for referring patients to specialist consultants in secondary care. A referral letter was

# Are services effective?

(for example, treatment is effective)

prepared and sent to the hospital with full details of the dentist's findings and a copy was stored on the practices' records system. When the patient had received their treatment they were discharged back to the practice. Their treatment was then monitored after being referred back to the practice to ensure patients had received a satisfactory outcome and all necessary post-procedure care. A copy of the referral letter was always available to the patient if they wanted this for their records.

## **Consent to care and treatment**

The practice ensured valid consent was obtained for all care and treatment. We spoke the hygienist and one of the associate dentists about their understanding of consent. They explained that individual treatment options, risks, benefits and costs were discussed with each patient and then documented in a written treatment plan. They stressed the importance of communication skills when

explaining care and treatment to patients to help ensure they had an understanding of their treatment options. Patients were asked to sign formal written consent forms for specific treatments.

All of the staff we spoke with were aware of the Mental Capacity Act 2005. (The Mental Capacity Act 2005 (MCA) provides a legal framework for health and care professionals to act and make decisions on behalf of adults who lack the capacity to make particular decisions for themselves).

The dentists we spoke with could describe scenarios for how they would manage a patient who lacked the capacity to consent to dental treatment. They noted that they would involve the patient's family, along with social workers and other professionals involved in the care of the patient, to ensure that the best interests of the patient were met.

# Are services caring?

## Our findings

### **Respect, dignity, compassion & empathy**

The comments cards we received all made positive remarks about the staff's caring and helpful attitude. Patients indicated that they felt comfortable and relaxed with their dentist and that they were made to feel at ease during consultations and treatments. Patients who were nervous about dental treatment indicated that their dentist was calm, worked with them, listened to their concerns, and gave them reassurance throughout the processes of the dental treatments. We also observed staff were welcoming and helpful when patients arrived for their appointment or made enquiries over the phone.

Staff were aware of the importance of protecting patients' privacy and dignity. The treatment rooms were situated away from the main waiting area and we saw that the

doors were closed at all times when patients were having treatment. Conversations between patients and the dentist could not be heard from outside the rooms, which protected patient's privacy.

Staff understood the importance of data protection and confidentiality and had received training in information governance. Patients' dental care records were stored in an electronic format. Records stored on the computer were password protected and regularly backed up.

### **Involvement in decisions about care and treatment**

Staff told us they worked towards providing clear explanations about treatment and prevention strategies. We saw evidence in the records that the dentist recorded the information they had provided to patients about their treatment and the options open to them.

The patient feedback we received via comments cards confirmed that patients felt appropriately involved in the planning of their treatment and were satisfied with the descriptions given by staff.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting patients' needs

We viewed the appointment system and saw that there was enough time scheduled to assess and undertake patients' care and treatment. Staff told us they did not feel under pressure to complete procedures and always had enough time available to prepare for each patient. They told us long appointments were allowed for assessments and treatment planning.

During our inspection we looked at examples of information available to people. We saw that the practice waiting area displayed a variety of information including NHS and private fees and the process for making a complaint if this was needed. We also observed patients actively using a self-check-in system when the reception staff were busy. New patients were given a practice booklet which included advice about appointments, opening hours and the list of dentists and hygienists in the practice.

### Tackling inequity and promoting equality

Staff told us they treated everybody equally and welcomed patients from a range of different backgrounds, cultures and religions. They told us they did not need a translation service for languages because they did not have many patients that attended the practice where they could not speak or understand English. The provider told us if there was a need for this they would use a telephone translation line.

We asked staff how they would support patients that had difficulty with hearing and vision. One of the reception staff explained how they would face the patient and speak slowly and clearly especially for someone who had hearing difficulties to allow the patient to lip read. Staff told us they would assist a blind patient or any patient who had difficulty with mobility by physically guiding and holding their arm if needed.

The practice carried out an assessment for disabled access. The managers recognised the practice was not fully meeting the needs for patients that used wheelchairs. Although an external ramp was in place and there were toilets and two treatment rooms on the ground level there were steps to overcome inside the practice. The managers were reviewing the options to implement retractable ramps that were easy to remove and store.

### Access to the service

The practice opening hours are Monday to Friday from 8.00am to 5.15pm.

We asked the staff about access to the service in an emergency or outside of normal opening hours. They told us the answer phone message gave details about how to access out-of-hours emergency treatment.

The reception staff told us that patients, who needed to be seen urgently, for example, because they were experiencing dental pain, were seen on the same day that they alerted the practice to their concerns. The feedback we received via comments cards confirmed that patients had good access to the dentists in the event of needing emergency treatment.

### Concerns & complaints

Information about how to make a complaint was displayed in the reception area. There was a formal complaints policy describing how the practice handled formal and informal complaints from patients. This included contact details of other agencies to contact if a patient was not satisfied with the outcome of the practice investigation into their complaint.

The practice manager explained the practice procedure for acknowledging, recording, investigating and responding to complaints, concerns and suggestions made by patients and found there was an effective system in place which ensured a timely response.

# Are services well-led?

## Our findings

### **Governance arrangements**

The governance arrangements for this location were robust. There was a comprehensive system of policies, protocols and procedures in place covering all of the clinical governance criteria expected in a dental practice. The systems and processes were well maintained and files were kept that were regularly reviewed and updated. Records, including those related to patient care and treatments, as well as staff employment, were kept accurately.

The staff fully understood all of the governance systems because there was a clear line of communication running through the practice. This was evidenced through the effective use of staff meetings where relevant information was shared and recorded, and through the high level of knowledge about systems and processes which staff were able to demonstrate to us via our discussions on the day of the inspection.

### **Leadership, openness and transparency**

The staff we spoke with described a transparent culture which encouraged candour, openness and honesty. Staff said they felt comfortable about raising concerns with the practice manager or the provider. They felt they were listened to and responded to when they did raise a concern. We found staff to be hard working, caring and committed to the work they did. All of the staff we spoke with demonstrated a firm understanding of the principles of clinical governance in dentistry and were happy with the practice facilities.

We found staff to be professional, hard working, caring and committed to their work and overall there was a strong

sense that staff worked together as a team. There was a system of yearly staff appraisals to support staff in carrying out their roles to a high standard. Notes from these appraisals also demonstrated that they identified staff's training and career goals.

### **Learning and improvement**

The practice had a programme of clinical audit that was used as part of the process for learning and improvement. These included audits for infection control, clinical record keeping, waiting times and X-ray quality. The auditing system demonstrated a generally high standard of work with only small improvements required. We saw notes from meetings which showed that results of audits were discussed in order to share achievements or action plans for improving performance.

All staff were supported to pursue development opportunities. We saw evidence that staff were working towards completing the required number of CPD hours to maintain their professional development in line with requirements set by the General Dental Council (GDC).

### **Practice seeks and acts on feedback from its patients, the public and staff**

The practice gathered feedback from patients through the use of a comments box and via the NHS 'Friends and Family Test'. The majority of feedback had been positive and indicated a high level of satisfaction with the care provided. We saw a report highlighting out of 82 patients 68 were extremely likely and 11 were likely to recommend friends and family to the service.

Staff told us that the provider was open to feedback regarding the quality of the care. The appraisal system and staff meetings also provided appropriate forums for staff to give their feedback.
