

Mr. Sandip Patel

# Carshalton Dental Centre

## Inspection Report

Levetts Cottages  
Wrythe Lane  
Carshalton  
SM5 2RE

Tel: 020 8669 8866

Website: [www.carshaltondentalcentre.co.uk](http://www.carshaltondentalcentre.co.uk)

Date of inspection visit: 12 February 2020

Date of publication: 10/03/2020

### Overall summary

We carried out this announced inspection on 12 February 2020 under section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a Care Quality Commission, (CQC), inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

#### **Our findings were:**

##### **Are services safe?**

We found this practice was providing safe care in accordance with the relevant regulations.

##### **Are services effective?**

We found this practice was providing effective care in accordance with the relevant regulations.

##### **Are services caring?**

We found this practice was providing caring services in accordance with the relevant regulations.

##### **Are services responsive?**

We found this practice was providing responsive care in accordance with the relevant regulations.

##### **Are services well-led?**

We found this practice was providing well-led care in accordance with the relevant regulations.

##### **Background**

Carshalton Dental Centre is in Carshalton in the London Borough of Sutton and provides NHS and private dental care and treatment for adults and children.

There is level access to the practice for people who use wheelchairs and those with pushchairs. Car parking spaces are available near the practice. Local bus and train services run close to the practice.

The dental team includes a principal dentist, two associate dentists, three dental nurses, one dental hygienist, two receptionists and a practice manager. The practice has two treatment rooms.

# Summary of findings

The practice is owned by an individual who is the principal dentist there. They have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run.

On the day of inspection, we collected 16 CQC comment cards filled in by patients and spoke with three other patients.

During the inspection we spoke with the principal dentist, one of the dental nurses and one of the receptionists. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open:

9.00am – 5.00pm Monday, Wednesday, Thursday and Fridays

9.00am -3.00pm on Tuesdays

## **Our key findings were:**

- The practice appeared to be visibly clean and well-maintained.
- The provider had infection control procedures which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The provider had systems to help them manage risk to patients and staff.
- The provider had safeguarding processes and staff knew their responsibilities for safeguarding vulnerable adults and children.
- The provider had staff recruitment procedures which reflected current legislation.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- Staff provided preventive care and supported patients to ensure better oral health.
- The appointment system took account of patients' needs.
- The provider had effective leadership and a culture of continuous improvement.
- Staff felt involved and supported and worked as a team.
- The provider asked staff and patients for feedback about the services they provided.
- The provider dealt with complaints positively and efficiently.
- The provider had information governance arrangements.

There were areas where the provider could make improvements. They should:

- Take action to ensure audits of infection prevention and control and disability access are undertaken at regular intervals to improve the quality of the service.
- Review the practice protocols regarding audits for prescribing of antibiotic medicines taking into account the guidance provided by the Faculty of General Dental Practice.
- Improve the practice's sharps procedures to ensure the practice is in compliance with the Health and Safety (Sharp Instruments in Healthcare) Regulations 2013.
- Take action to ensure the clinicians take into account the guidance provided by the Faculty of General Dental Practice when completing dental care records.
- Implement an effective system for monitoring and recording the fridge temperature to ensure that medicines and dental care products are being stored in line with the manufacturer's guidance.

# Summary of findings

## The five questions we ask about services and what we found

We always ask the following five questions of services.

<b>Are services safe?</b>	<b>No action</b>	✓
<b>Are services effective?</b>	<b>No action</b>	✓
<b>Are services caring?</b>	<b>No action</b>	✓
<b>Are services responsive to people's needs?</b>	<b>No action</b>	✓
<b>Are services well-led?</b>	<b>No action</b>	✓

# Are services safe?

## Our findings

We found this practice was providing safe care in accordance with the relevant regulations.

### **Safety systems and processes, including staff recruitment, equipment and premises and radiography (X-rays)**

Staff had clear systems to keep patients safe.

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances.

The provider had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff had received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns, including notification to the CQC.

The provider had a system to highlight vulnerable patients and patients who required other support such as with mobility or communication, within dental care records.

The provider also had a system to identify adults that were in other vulnerable situations for example. those who were known to have experienced modern-day slavery or female genital mutilation.

The provider had an infection prevention and control policy and procedures. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices, (HTM 01-05), published by the Department of Health and Social Care. Staff completed infection prevention and control training and received updates as required.

The provider had arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM 01-05. The records showed equipment used by staff for cleaning and sterilising instruments was validated, maintained and used in line with the manufacturers' guidance. The provider had suitable numbers of dental instruments available for the clinical staff and measures were in place to ensure they were decontaminated and sterilised appropriately.

The staff had systems in place to ensure that patient-specific dental appliances were disinfected prior to being sent to a dental laboratory and before treatment was completed.

We saw staff had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment. All recommendations in the assessment had been actioned and records of water testing and dental unit water line management were maintained.

We saw effective cleaning schedules to ensure the practice was kept clean. When we inspected we saw the practice was visibly clean.

The provider had policies and procedures in place to ensure clinical waste was segregated and stored appropriately in line with guidance.

The provider carried out infection prevention and control audits once a year. The latest audit showed the practice was meeting the required standards. Improvements were required to ensure that audits were completed every six months in line with guidance.

The provider had whistleblowing policy. Staff felt confident they could raise concerns without fear of recrimination.

The dentists used dental dam in line with guidance from the British Endodontic Society when providing root canal treatment. In instances where dental dam was not used, such as for example refusal by the patient, and where other methods were used to protect the airway, we saw this was documented in the dental care record and a risk assessment completed.

The provider had a recruitment policy and procedure to help them employ suitable staff and had checks in place for agency and locum staff. These reflected the relevant legislation. We looked at four staff recruitment records. These showed the provider followed their recruitment procedure.

We observed that clinical staff were qualified and registered with the General Dental Council and had professional indemnity cover.

Staff ensured equipment were safe, and that equipment was maintained according to manufacturers' instructions, including electrical appliances. Portable appliance testing was carried out periodically.

# Are services safe?

The practice operated from a rented premises. A fire risk assessment was carried internally by the practice. The provider advised us that they had contacted the landlord to get confirmation of the external fire risk assessment and fixed wire electrical testing. On the day of the inspection they were still awaiting confirmation from the landlord but assured us that they were seeking the evidence.

The practice had arrangements to ensure the safety of the X-ray equipment and we saw the required radiation protection information was available.

We saw evidence the dentists justified, graded and reported on the radiographs they took. The provider carried out radiography audits every year following current guidance and legislation.

Clinical staff completed continuing professional development in respect of dental radiography.

## Risks to patients

The provider had implemented systems to assess, monitor and manage risks to patient safety.

The practice's health and safety policies, procedures and risk assessments were reviewed regularly to help manage potential risk. The provider had current employer's liability insurance.

We looked at the practice's arrangements for safe dental care and treatment. The staff broadly followed the relevant safety regulation when using needles and other sharp dental items. A sharps risk assessment had not been undertaken. We discussed this with the provider and they assured us that they would complete a risk assessment as soon as possible.

The provider had a system in place to ensure clinical staff had received appropriate vaccinations, including vaccination to protect them against the Hepatitis B virus, and that the effectiveness of the vaccination was checked.

Staff had completed sepsis awareness training. Sepsis prompts for staff and patient information posters were displayed throughout the practice. This helped ensure staff made triage appointments effectively to manage patients who present with dental infection and where necessary refer patients for specialist care

Staff knew how to respond to a medical emergency and had completed training in emergency resuscitation and basic life support every year.

Emergency equipment and medicines were available as described in recognised guidance. We found staff kept records of their checks of these to make sure they were available, within their expiry date, and in working order. Improvements were required to ensure that the fridge temperatures were monitored to ensure that items stored in the fridge were stored within manufacturers recommended guidelines.

A dental nurse worked with the dentists when they treated patients in line with General Dental Council Standards for the Dental Team. A risk assessment was in place for when the dental hygienist worked without chairside support.

The provider had risk assessments to minimise the risk that can be caused from substances that are hazardous to health.

## Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment to patients.

We discussed with the dentist how information to deliver safe care and treatment was handled and recorded. We looked at dental care records with clinicians to confirm our findings and observed that individual records were written or typed. Dental care records we saw were legible, kept securely and complied with General Data Protection Regulation requirements. Improvements were required to ensure that dental care records accurately reflected consultations with patients.

The provider had systems for referring patients with suspected oral cancer under the national two-week wait arrangements. These arrangements were initiated by National Institute for Health and Care Excellence to help make sure patients were seen quickly by a specialist.

## Safe and appropriate use of medicines

The provider had systems for appropriate and safe handling of medicines.

We saw staff stored and kept records of NHS prescriptions as described in current guidance. There was however no system in place for tracking prescriptions. We spoke with the provider and they implemented a system immediately.

The dentists were aware of current guidance with regards to prescribing medicines.

## Are services safe?

Antimicrobial prescribing audits were not being carried out. We discussed this with the provider and they confirmed they would review this.

### **Track record on safety, and lessons learned and improvements**

The provider had implemented systems for reviewing and investigating when things went wrong. There were comprehensive risk assessments in relation to safety issues. Staff monitored and reviewed incidents. This helped staff to understand risks which led to effective risk management systems in the practice as well as safety improvements.

In the previous 12 months there had been no safety incidents. Staff told us that any safety incidents would be investigated, documented and discussed with the rest of the dental practice team to prevent such occurrences happening again.

The provider had a system for receiving and acting on safety alerts. Staff learned from external safety events as well as patient and medicine safety alerts. We saw they were shared with the team and acted upon if required.

# Are services effective?

(for example, treatment is effective)

## Our findings

We found this practice was providing effective care in accordance with the relevant regulations.

### **Effective needs assessment, care and treatment**

The practice had systems to keep dental professionals up to date with current evidence-based practice. We saw clinicians assessed patients' needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

Staff had access to models and pictures to enhance the delivery of care.

### **Helping patients to live healthier lives**

The practice provided preventive care and supported patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists prescribed high concentration fluoride products if a patient's risk of tooth decay indicated this would help them.

The clinicians where applicable, discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided leaflets to help patients with their oral health.

### **Consent to care and treatment**

Staff obtained consent to care and treatment in line with legislation and guidance. Improvements were required with regards to documenting this in dental care records.

The practice team understood the importance of obtaining and recording patients' consent to treatment. The staff were aware of the need to obtain proof of legal guardianship or Power of Attorney for patients who lacked

capacity or for children who are looked after. The dentists gave patients information about treatment options and the risks and benefits of these, so they could make informed decisions. We saw this documented in patients' records. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who might not be able to make informed decisions. The policy also referred to Gillick competence, by which a child under the age of 16 years of age may give consent for themselves in certain circumstances. Staff were aware of the need to consider this when treating young people under 16 years of age.

### **Monitoring care and treatment**

The practice kept dental care records containing information about the patients' current dental needs, past treatment and medical histories. Improvements were required to ensure that dental care records accurately reflected patients' details and updated medical histories.

### **Effective staffing**

Staff had the skills, knowledge and experience to carry out their roles.

Staff new to the practice had a structured induction programme. We confirmed clinical staff completed the continuing professional development required for their registration with the General Dental Council.

### **Co-ordinating care and treatment**

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

The dentists confirmed they referred patients to a range of specialists in primary and secondary care for treatment the practice did not provide.

# Are services caring?

## Our findings

We found this practice was providing caring services in accordance with the relevant regulations.

### **Kindness, respect and compassion**

Staff treated patients with kindness, respect and compassion.

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were professional, friendly and understanding. We saw staff treated patients respectfully, appropriately and kindly and were friendly towards patients at the reception desk and over the telephone.

Patients commented that staff were compassionate and understanding.

Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

### **Privacy and dignity**

Staff respected and promoted patients' privacy and dignity.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided privacy when reception staff were dealing with patients. If a patient asked for more privacy, the practice would respond appropriately. The reception computer screens were not visible to patients and staff did not leave patients' personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

### **Involving people in decisions about care and treatment**

Staff helped patients to be involved in decisions about their care. They were aware of the Accessible Information Standard and the requirements of the Equality Act. The Accessible Information Standard is a requirement to make sure that patients and their carers can access and understand the information they are given. We saw:

- Interpreter services were available for patients who did not speak or understand English. Patients were also told about multi-lingual staff that might be able to support them. This included Polish, German and Urdu
- Staff communicated with patients in a way they could understand, and communication aids and easy-read materials were available.

Staff gave patients clear information to help them make informed choices about their treatment. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them. A dentist described the conversations they had with patients to satisfy themselves they understood their treatment options.

The practice's website and information leaflet provided patients with information about the range of treatments available at the practice.

The dentist described to us the methods they used to help patients understand treatment options discussed. These included for example photographs, study models, videos and X-ray images.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

We found this practice was providing responsive care in accordance with the relevant regulations.

### Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

Staff were clear about the importance of emotional support needed by patients when delivering care. They conveyed a good understanding of supporting more vulnerable members of society such as patients with dementia, and adults and children with a learning difficulty.

Patients described high levels of satisfaction with the responsive service provided by the practice.

Two weeks before our inspection, CQC sent the practice 50 feedback comment cards, along with posters for the practice to display, encouraging patients to share their views of the service.

Sixteen cards were completed, giving a patient response rate of 32%. All of the views expressed by patients were positive. Common themes within the positive feedback were friendliness of staff, easy access to dental appointments, flexibility of appointment times. We shared this with the provider in our feedback.

We were able to talk with three patients on the day of inspection. Feedback they provided aligned with the views expressed in completed comment cards.

The practice currently had some patients for whom they needed to adjust enable them to receive treatment. The practice had made reasonable adjustments for patients with disabilities. This included step free access and accessible toilet.

Staff told us they had carried out a disability access audit and had formulated an action plan to continually improve access for patients. We were informed that the audit was completed many years ago and could not be located on the day of the inspection. We saw that access was considered as part of the general health and safety risk assessment. The provider told us they would ensure disability access audits were completed periodically.

Staff telephoned some patients on the morning of their appointment to make sure they could get to the practice.

### Timely access to services

Patients could access care and treatment from the practice within an acceptable timescale for their needs.

The practice displayed its opening hours in the premises and included it in their information leaflet and on their website.

The practice had an appointment system to respond to patients' needs. Patients who requested an urgent appointment were offered an appointment the same day. Patients had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection.

The practice's website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

### Listening and learning from concerns and complaints

Staff told us the practice manager took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

The provider had a policy providing guidance to staff about how to handle a complaint. The practice information leaflet explained how to make a complaint.

The practice manager was responsible for dealing with these. Staff told us they would tell the practice manager about any formal or informal comments or concerns straight away so patients received a quick response.

The practice aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice manager had dealt with their concerns.

We looked at comments, compliments and complaints the practice received in the past 12 months. These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

# Are services well-led?

## Our findings

We found this practice was providing well-led care in accordance with the relevant regulations.

### **Leadership capacity and capability**

The principal dentist had the capacity, values and skills to deliver high-quality, sustainable care.

The principal dentist was knowledgeable about issues and priorities relating to the quality and future of the service. They understood the challenges and were addressing them. Staff told us they worked closely with them to make sure they prioritised compassionate and inclusive leadership.

### **Culture**

The practice had a culture of high-quality sustainable care.

Staff stated they felt respected, supported and valued. They were proud to work in the practice.

Staff discussed their training needs at an annual appraisals. They also discussed learning needs, general wellbeing and aims for future professional development.

We saw the provider had systems in place to deal with staff poor performance.

Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the Duty of Candour.

Staff could raise concerns and were encouraged to do so, and they had confidence that these would be addressed.

### **Governance and management**

Staff had clear responsibilities, roles and systems of accountability to support good governance and management.

The principal dentist had overall responsibility for the management and clinical leadership of the practice. The practice manager was responsible for the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities.

The provider had a system of clinical governance in place which included policies, protocols and procedures that were accessible to all members of staff and were reviewed on a regular basis.

### **Appropriate and accurate information**

Staff acted on appropriate and accurate information.

The provider had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

### **Engagement with patients, the public, staff and external partners**

The provider involved patients, staff and external partners to support the service.

The provider used comment cards, online reviews and encouraged verbal comments to obtain staff and patients' views about the service.

Patients were encouraged to complete the NHS Friends and Family Test. This is a national programme to allow patients to provide feedback on NHS services they have used.

The provider gathered feedback from staff through meetings and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on.

### **Continuous improvement and innovation**

The provider had systems and processes for learning, continuous improvement and innovation.

The provider had quality assurance processes to encourage learning and continuous improvement. These included audits of radiographs and infection prevention and control. Staff kept records of the results of these audits and the resulting action plans and improvements. Improvements were required to ensure infection control and disability access audits were completed at regular intervals.

The principal dentist showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff. Basic life support training was provided annually, and staff told us they were supported to support other training if they expressed an interest to do so.
